You can access FileCloud in your mobile device through an app downloaded from one of the stores indicated above or by entering the FileCloud Web browser address into your mobile browser.

iPhone and iPad

As FileCloud Server users, you can install the FileCloud iOS app on any iOS device, including:

- iPad
- iPhone
- iPod Touch

Before you can access your files with your FileCloud account, you must install the app and configure your device.

[iOS Getting Started Guide \(see page 2\)](#)

- Install the FileCloud iOS app
- Add your FileCloud account
- Navigate in FileCloud on iOS

After you install the app and add your FileCloud account, you can access, edit, share, and secure your files.

[iOS Users Guide \(see page 12\)](#)

- [iOS Settings for FileCloud \(see page 12\)](#)
- [File and Folder Actions on iOS \(see page 25\)](#)

- [FileCloud iOS Integration with 3rd Party Apps \(see page 275\)](#)

iOS Getting Started Guide

Beginning with version 23.241, FileCloud no longer supports iOS 13 and iOS 14.

Before you can access your files with your FileCloud account, you must install the app and configure your device.

Setting Up Your Device

1. Install the FileCloud iOS app

⚠ Before installing the app on your phone, you must have a FileCloud account. Contact your administrator if you do not have one yet.

To install the FileCloud iOS app:

1. On your device, navigate to Apple's App Store.
2. Download the FileCloud iOS app.¹

3. When the app is completely downloaded, tap **Open**.

2. Add your FileCloud account

When you add an account, you must authenticate it using one of the following methods:

- Password
- Device Code Authentication
- Single Sign-On (SSO)

The method you choose depends on how your FileCloud administrator configures authentication. If you aren't sure, contact your administrator.

To add your FileCloud account and authenticate it:

1. Tap the icon for the FileCloud app to open it.
The **Welcome** screen opens.
2. Enter your FileCloud address, and tap **Next**.

1. <https://itunes.apple.com/gb/app/filecloud-enterprise-file/id646612982?mt=8>

Service  12:13 PM 

Welcome

Please enter your server address :

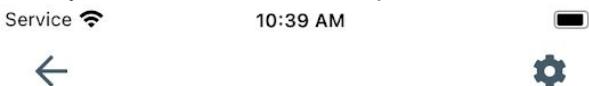

https://

Next

3. Log in one of the following ways:

- Enter your account name and password and tap **Login**. You are logged in to your FileCloud account.
- Tap **Login with SSO**.

- Enter your account name and tap **Device Code Authentication**.

Account

jennifer

Password

Login

other login options

Login with SSO

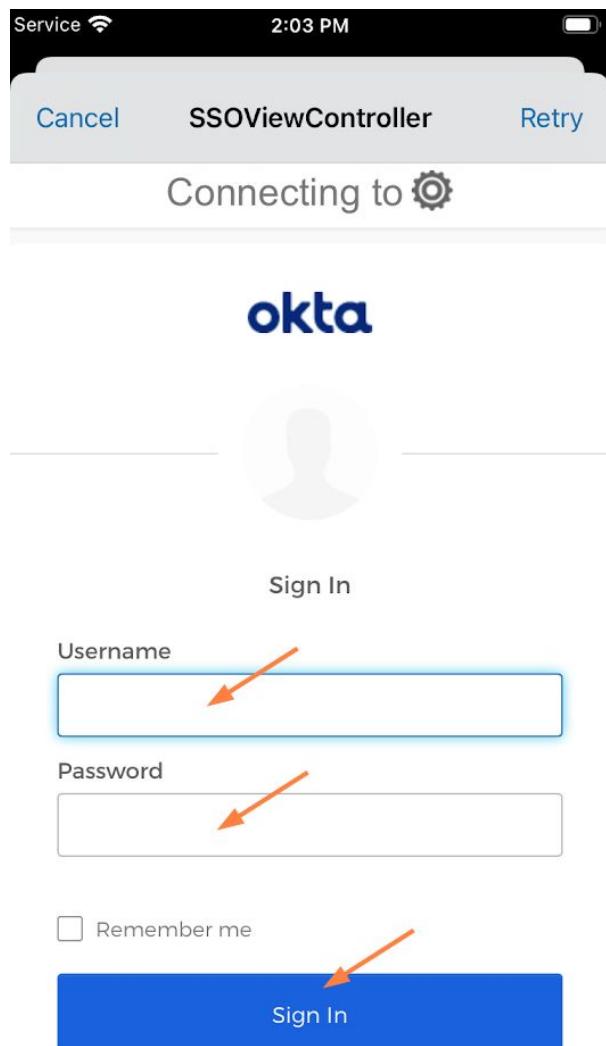

Device Code Authentication

Login with SSO

You are able to log in with SSO if your FileCloud system supports SSO.

- Tap **Login with SSO**.

Your SSO sign in screen opens, for example:

ii. Enter your SSO username and password and sign in.

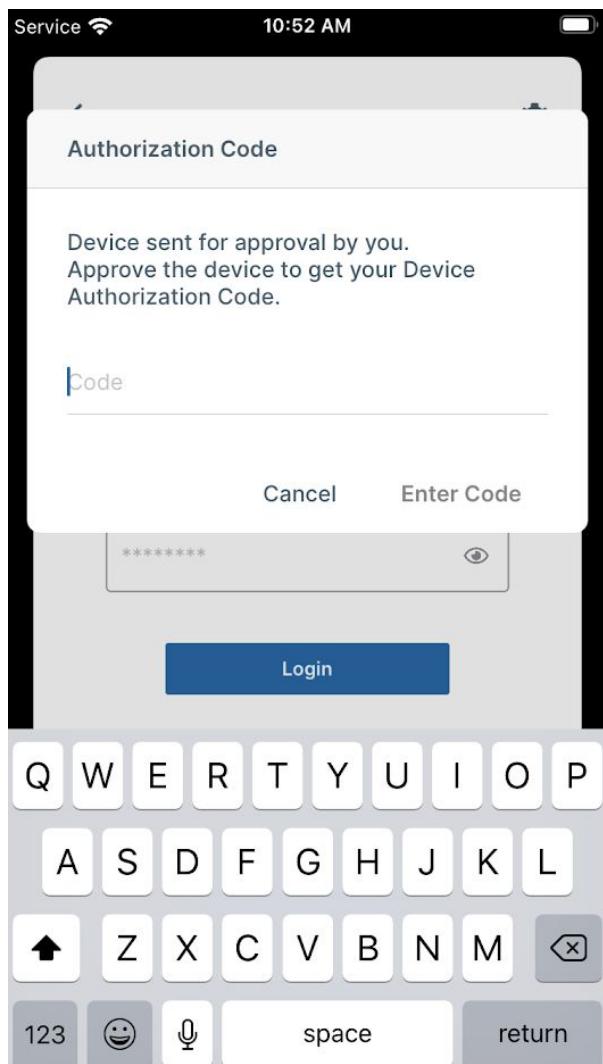

You are automatically logged in to FileCloud.

Note: If you cannot authenticate using SSO, check with your administrator.

Device Code Authentication

1.

- a. After entering your account name into **Account**, tap **Device Code Authentication**. An **Authorization Code** dialog box opens:

- b. Log in to the FileCloud user portal, and go to **Settings > Devices**.
- c. In the row for your iPhone, click the check.

General	Devices	Notifications
	<div style="display: flex; justify-content: flex-end; align-items: center;">Refresh  </div>	

A device authorization code pops up.

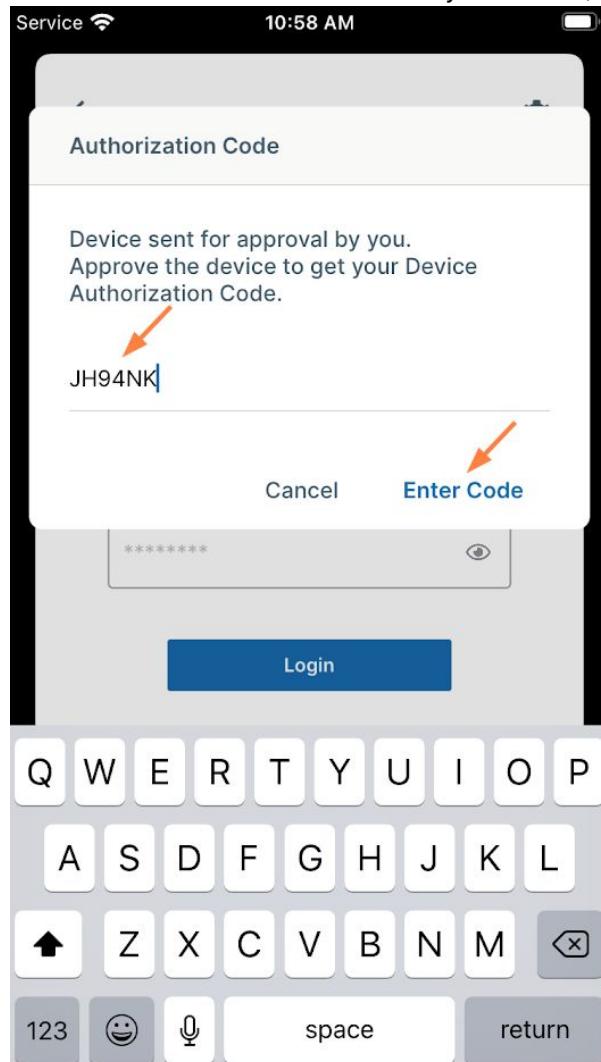

Device Authorization Code:

J H 9 4 N K

Please enter the above authorization code in your device to login.

[Close](#)

d. Enter the code into the **Code** field on your iPhone, and tap **Enter Code**.

You are logged in to your FileCloud account.

Once the account is authenticated, you are logged in to FileCloud and shown the FileCloud user dashboard.

3. Navigate in FileCloud on iOS

FileCloud's iOS interface has a navigation pane that you can access by tapping the Menu icon in the upper-left corner of the screen:

Tapping the icon opens a panel of navigation links:

1. **Dashboard** - Opens the iOS dashboard. For definitions of the folders that appear on the dashboard, see [My Files](#), [Team Folders](#), [Network Shares](#), and [Shared with Me](#).
2. **Recent** - Opens the **Recent** screen, which lists the files you have accessed most recently.
3. **Starred** - Opens the **Starred** screen, which lists the files and folders you have starred as favorites. See [Star a File or Folder in iOS](#) (see page 219).
4. **Shared by Me** - Opens the **Shared by Me** screen, which lists the files and folders you have shared with other users or groups.
5. **Actions** - Opens the **Actions** page, which lists any file approvals sent to you. The **Inbox** lists outstanding approvals, and the **Sent** box lists files that you have already approved or rejected. For more information, see [File Approval in iOS](#) (see page 201).
6. **File Operations** - Opens the File Operations window, which includes tabs for **Transfers**, **Operations**, and **Syncs**. The **Transfers** tab lists recent file and folder downloads and uploads. The **Operations** tab lists copy and move operations. The **Syncs** tab lists recent Sync operations. See [View File Operations in iOS](#) (see page 235).
7. **Settings** - Opens a page of FileCloud iOS settings as well as helpful information and links. See [iOS Settings for FileCloud](#) (see page 12).
8. **Offline files** - Displays the folders and files that are stored on your phone that you can view when not connected to a FileCloud server. The data will be split into sub-folders based on the server they are stored in, so that you can log in to multiple servers and the data is still clearly separated. Here you can also find the logs folder that stores the iOS app log files.

In the navigation panel, a **Sync now** button appears below the **Offline files** link. Tap the **Sync now** button to synchronize your offline and online folders. See [iOS File Sync](#) (see page 248).

iOS Users Guide

Beginning with version 23.241, FileCloud no longer supports iOS 13 and iOS 14.

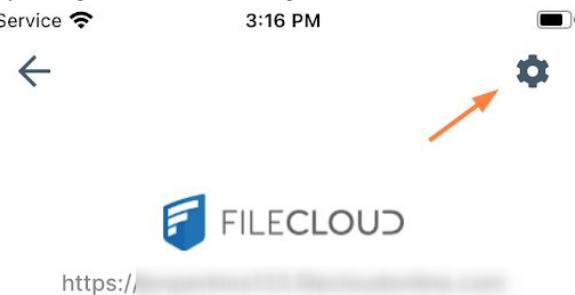

After you install the app and add your FileCloud account, you can access, edit, share, and secure your files.

- [iOS Settings for FileCloud \(see page 12\)](#)
- [File and Folder Actions on iOS \(see page 25\)](#)

About

View the FileCloud version you have installed, or click one of the links to view the FileCloud Privacy policy, Terms of service, or online help.

Configure iOS Security

There are several ways that your FileCloud information is kept secure when you are working in iOS.

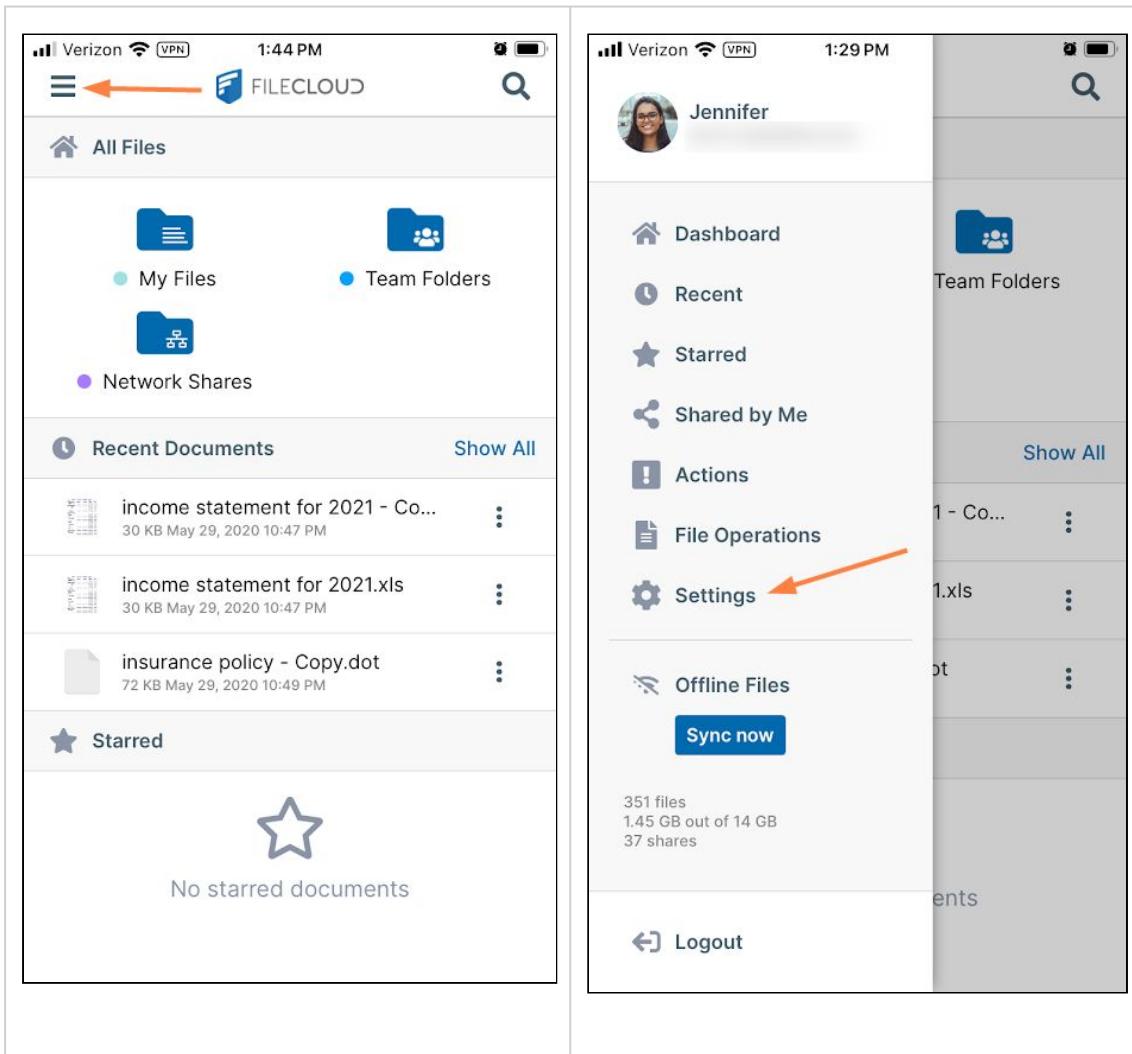

- Your FileCloud authentication information is saved securely in iOS's keychain infrastructure and cannot be accessed by anyone, even if your device is lost.
- Both your iOS device and the FileCloud Server reside in your LAN, and you always access them directly there, so your data is never sent outside the network.

To further secure your connection:

- Use `https://` instead of `http://`
- In FileCloud's **Settings**, you can activate **Enable passcode** to require that you perform an in-app phone unlock (using, for example, TouchID, FaceID, or the phone's passcode) to open FileCloud.
- In **Settings**, you can also slide the **Enable app integrations** switch to off to disable browsing and working with FileCloud servers from the iOS Files app (which gives you the ability to access the files from third-party apps).

To configure FileCloud settings for security in iOS:

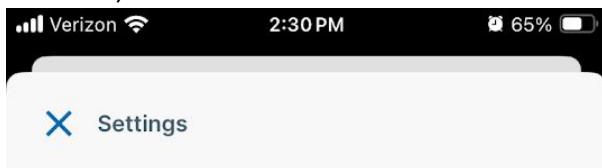

1. Log in to the app, and tap the menu icon in the upper left corner, then choose **Settings**.

The **Settings** options appear.

2. By default, **Enable passcode** is disabled. If you want to require **Touch ID** or **Face ID** entry to open FileCloud, enable it. You must already have **Touch ID** or **Face ID** enabled in your iOS device for this functionality to work. See <https://support.apple.com/iphone> for help configuring these options on your device.
3. By default, **Enable app integrations** is enabled. If you do not want the ability to access FileCloud files through the iOS Files app, which enables you to access the files through apps other than

FileCloud, disable it.

Troubleshooting iOS Issues

If you encounter problems with the FileCloud iOS app, refer to the information on this page.

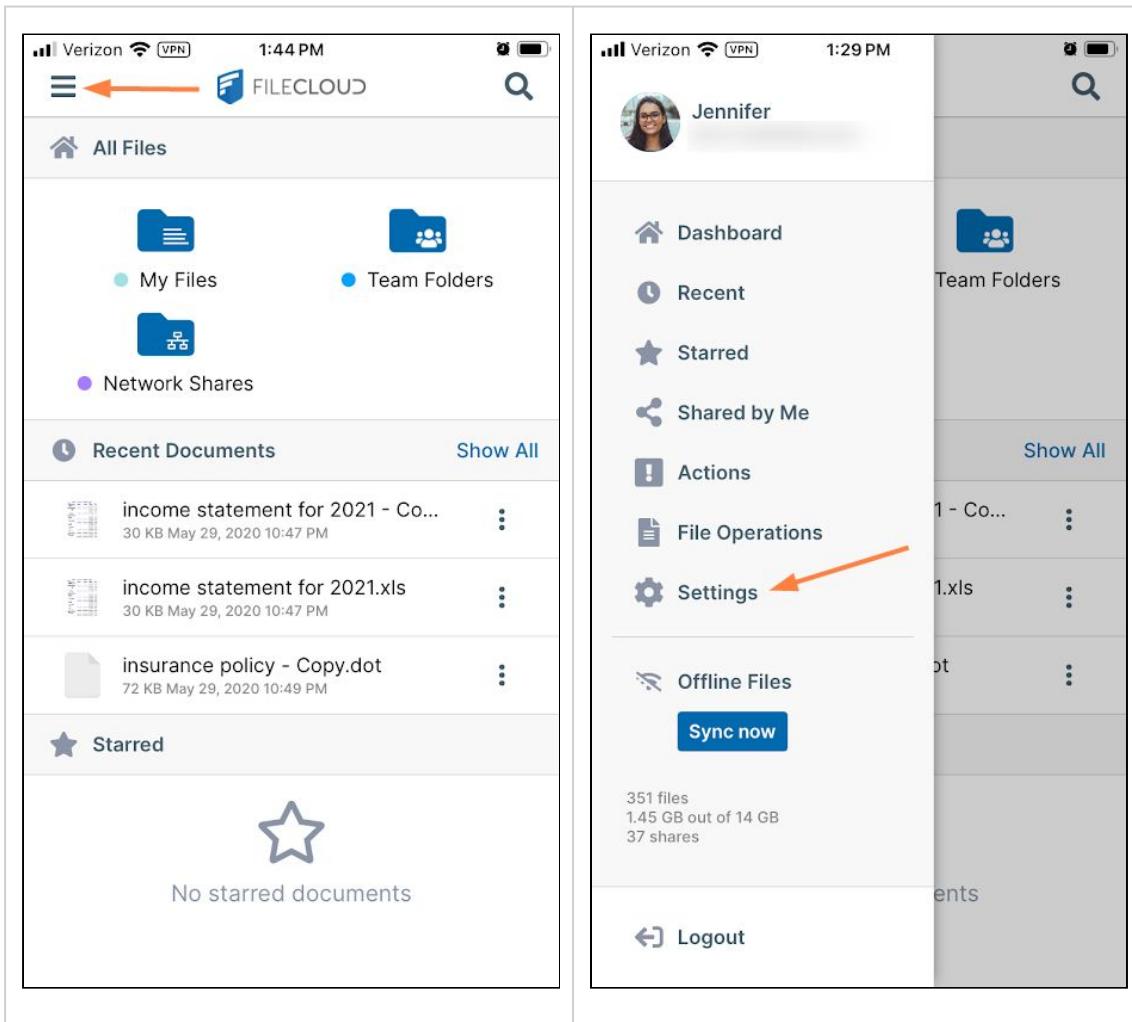

Getting Device Logs

Getting the device logs is the first step towards understanding a problem and distinguishing between server-side issues and iOS issues.

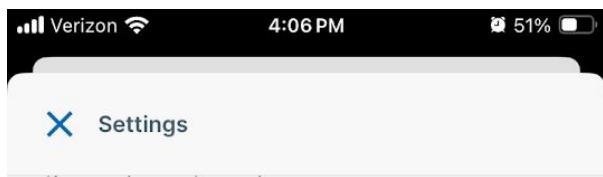

Sharing log information with our support team will help us investigate your issue and solve it promptly.

To access the log files:

1. Log in to the app, and tap the menu icon in the upper left corner, then tap **Settings**.

2. In **Settings**, scroll down, and tap **Get log files**.

A message confirming that your log files have been saved to **Offline Files/Logs** appears.

Now, use the following procedure to download the log files.

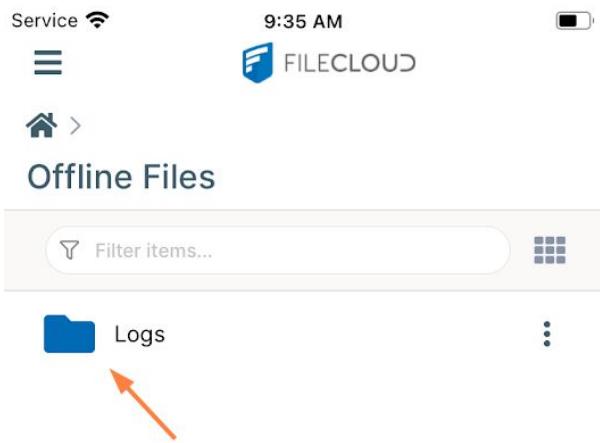

To go to the log files from user settings:

1. Tap the menu icon in the upper left corner, then tap **Offline files**.

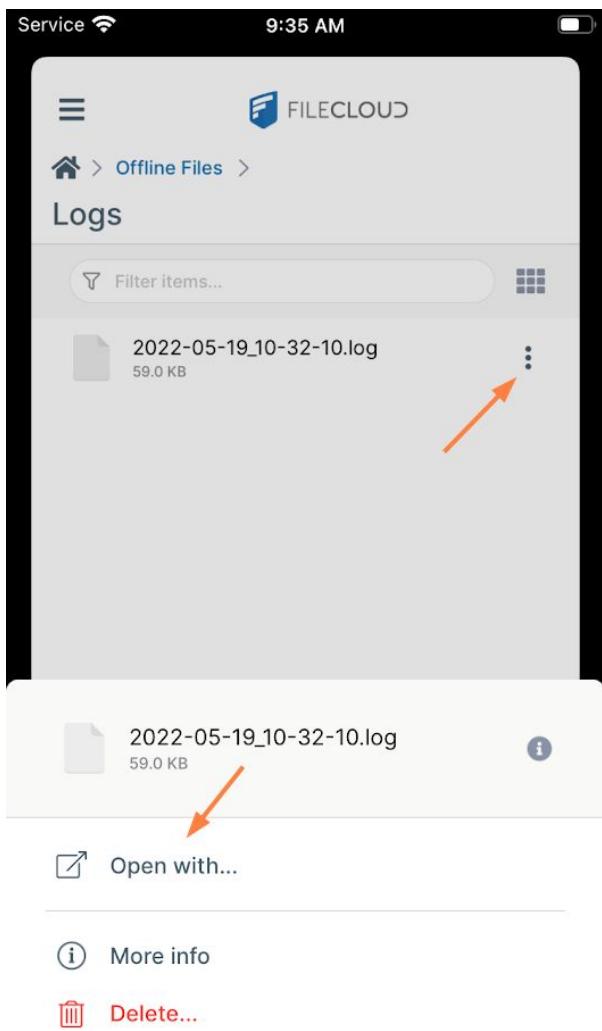

The **Offline Files** folder opens. Log files are stored in the **Logs** folder.

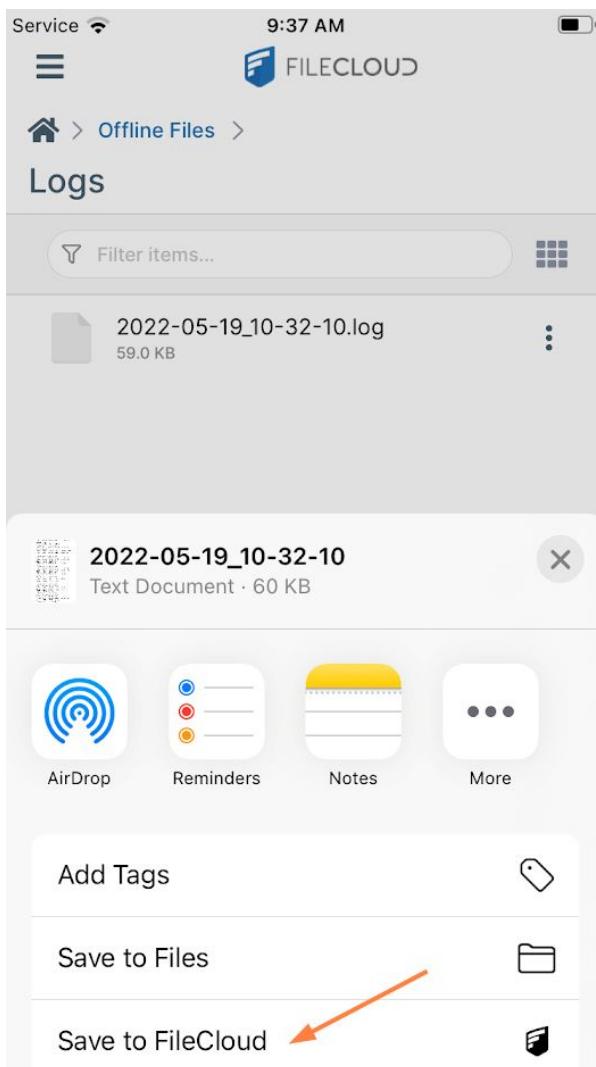

2. Tap the folder to access the log files.

3. Tap the More (3-dot) icon for the log file that you want to send, and tap **Open with** to open or save it.

4. Save it to FileCloud or choose another option that enables you to download the file and send it to FileCloud Support.

💡 Your administrator can also get the logs from your device remotely.

Preview and Edit iOS Files

In the FileCloud iOS app, you can preview files in your FileCloud account. You can edit some types of files in your FileCloud account; other file types have to be downloaded and edited in a third-party application.

You can:

- Preview .pdf and .txt files and edit them in the FileCloud iOS application. No third-party app is required.
- Open Office files such as .docx, .xlsx, .pptx etc. for edit by opening them in the appropriate app or open them directly from the MS Office app.
- Open other file types by opening the file in the appropriate app.
- Stream music and video files.

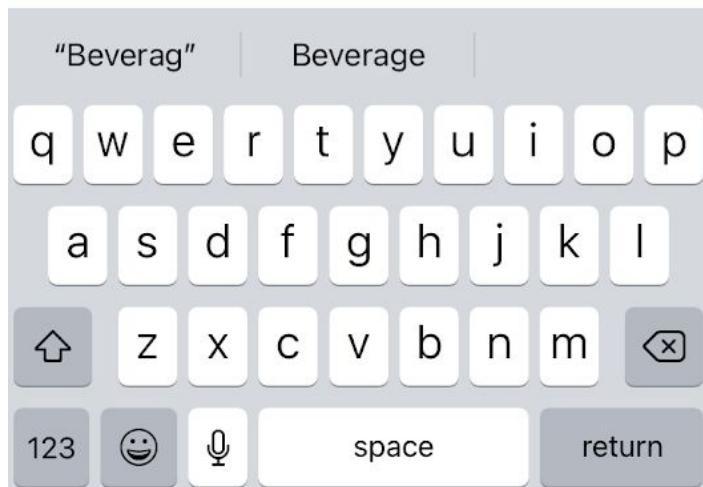

Previewing and editing PDFs and text files

How do I preview and edit PDFs and text files?

Tap the name or icon for a .pdf or .txt file, and it opens for preview in the FileCloud iOS app. The preview screen for pdfs lets you open your document for edit using the Edit icon. You are prompted to save your changes when you exit the file.

The preview screen for text files also lets you open files for edit using an Edit icon. Tap the **Save** icon when you're done.

All changes to PDFs and text files are saved in FileCloud.

Previewing and editing Office files

What are my options for previewing and editing Office files?

The recommended method of editing Office files in FileCloud is to open them from the Office app and make changes there. The changes are automatically saved to FileCloud.

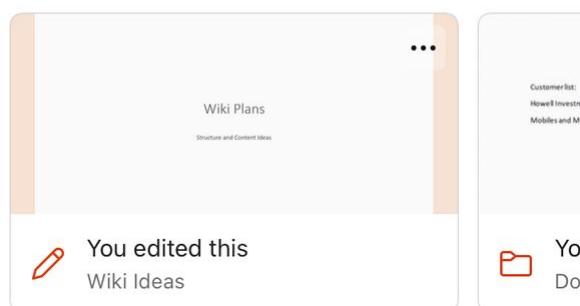

You can also open the file in the FileCloud app and choose a third-party app to edit it with. In this case, the changes are also saved to FileCloud

To open an Office file for edit from the Office app:

1. If you do not have the Microsoft Office app installed, go to the Apps store and install it.
2. Open the Office app on your iOS device, and log in with the Office account you use with FileCloud.
3. Tap the folder icon to browse your locations.

Recommended

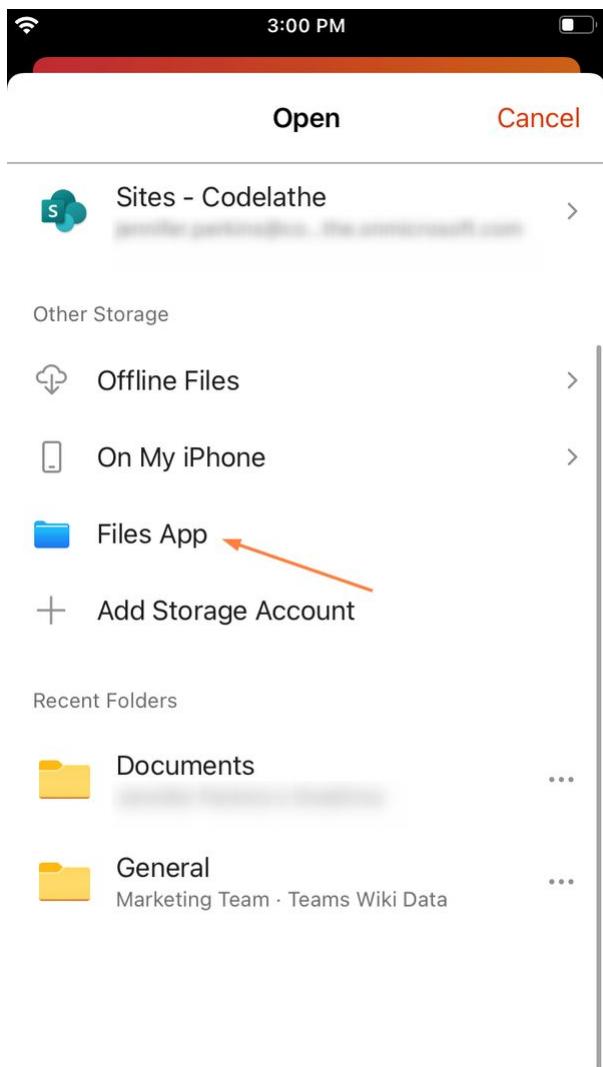

Today

This Week

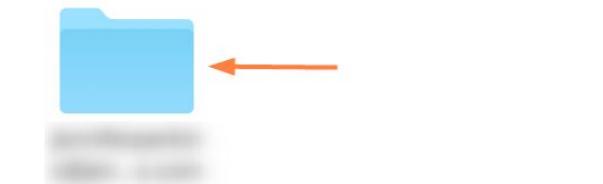

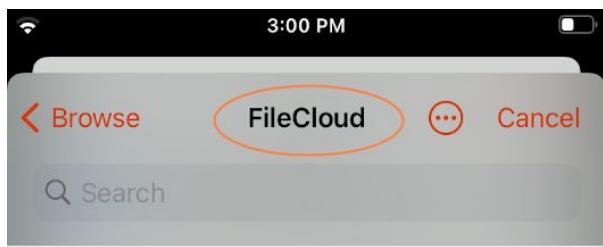

4. Tap the **Files App** folder to access FileCloud (and other apps where files are stored).

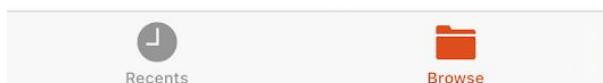

If FileCloud was the last file app you accessed, the FileCloud location opens. Otherwise, you may have to click **Browse** and choose FileCloud.

5. Tap the FileCloud folder to open it.

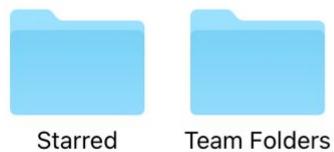

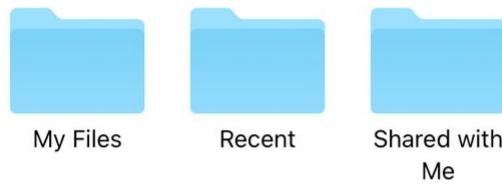

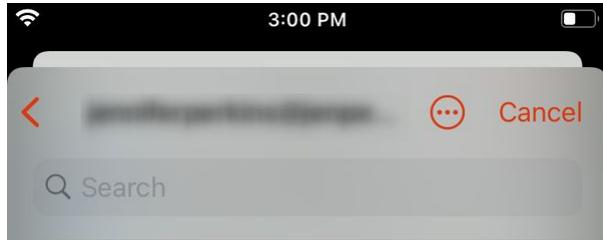

1 item

✗ Read-Only

Now you should see your FileCloud folders:

16		15 Kina	Hazelton	Female	Great Britain
17		16 Shavonne	Pia	Female	France
18		17 Shavon	Ronin	Female	France

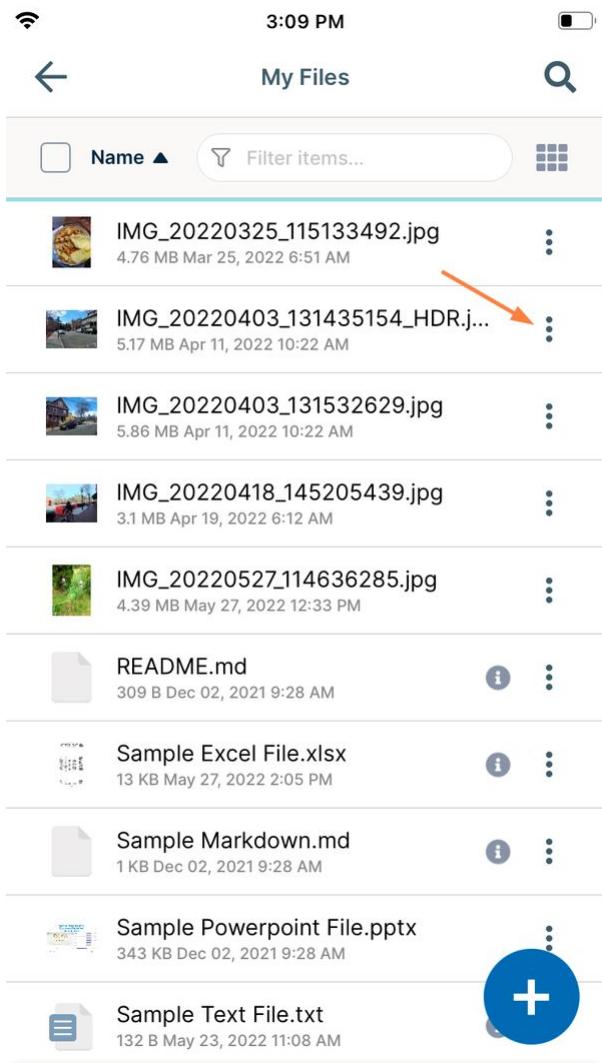

The updates to the file are saved to FileCloud.

Previewing and editing other file types

How do I open other file types for preview or edit?

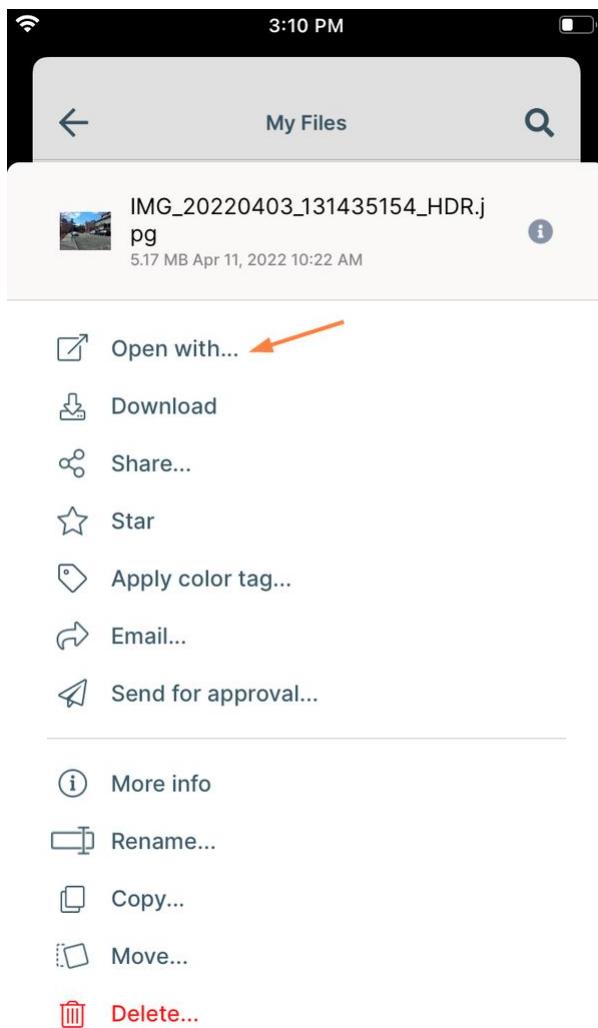

File types other than .pdf, .txt, and Office file types may be opened from FileCloud into a third-party application to edit, but they are actually being downloaded, and the edits are not automatically saved in FileCloud. To add the edits to your FileCloud copy of the file, you must manually upload the edited copy of the file into FileCloud.

1. Open the FileCloud app, and navigate to the file that you want to edit.
2. Tap the more (three dot) icon to the right of the file.

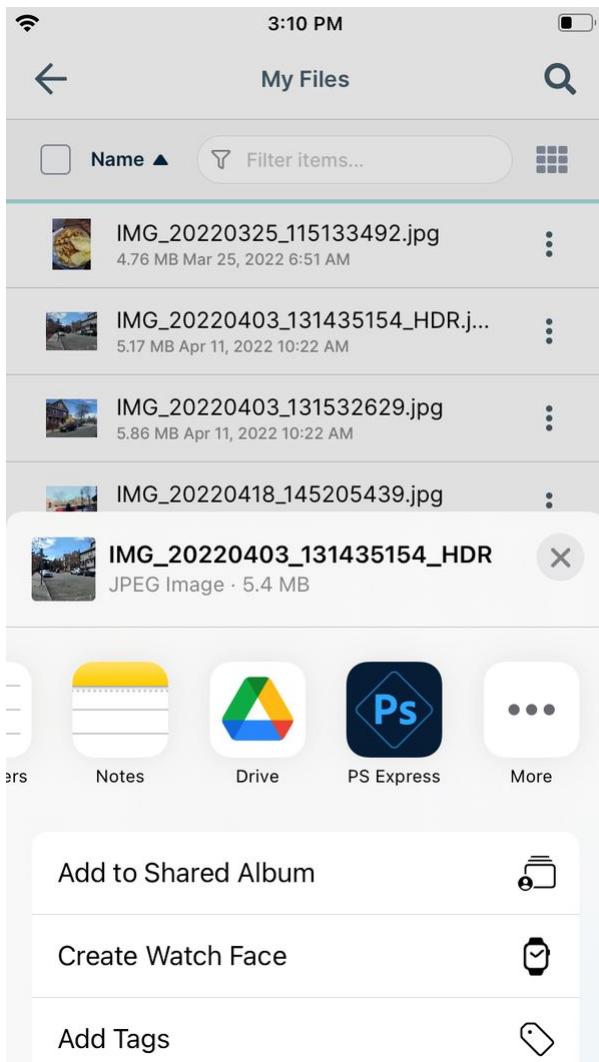

A list of options opens.

3. Tap **Open with**.

The screen displays apps available for opening the file either for viewing or editing:

4. Select one of the apps.

The file is downloaded from FileCloud and opened in the app.

After you edit and save the file, you must upload it to FileCloud to view the changes in FileCloud.

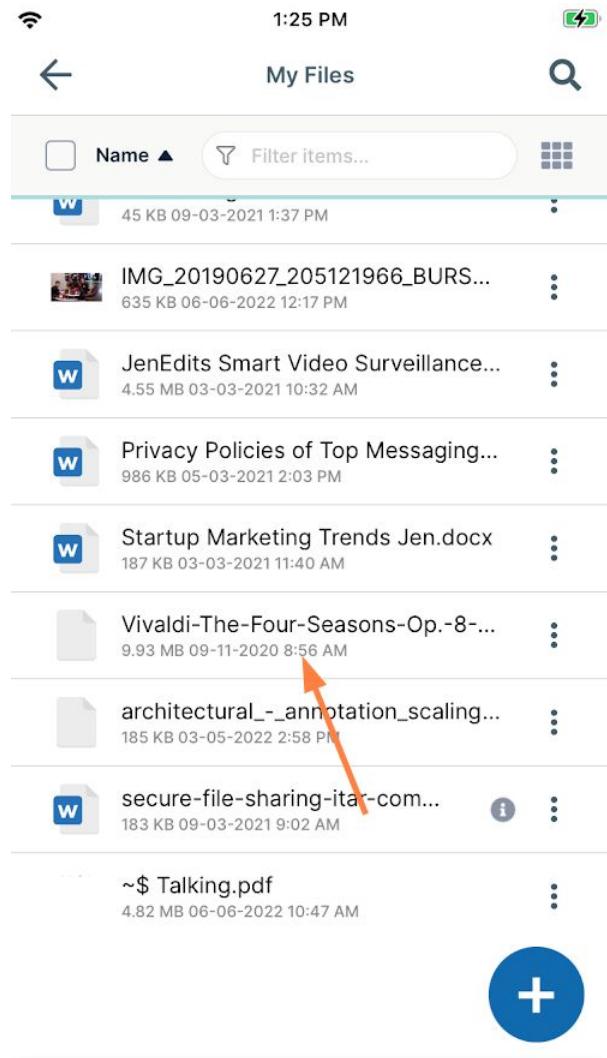

Play Back iOS Audio Files

The following formats are supported natively for playback in the FileCloud iOS app:

- .mp3
- .m4a
- .flac
- .aac
- .wma
- .wav
- .m4b
- .ogg

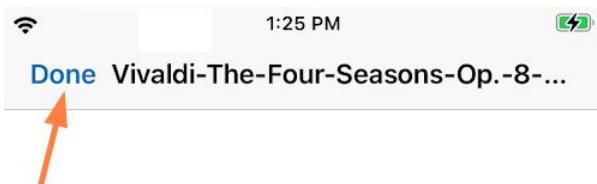

To play back an audio file:

1. Tap on the file.

The file opens in an audio player.

2. Tap the play button to play the audio file.
3. Tap **Done** to return to its FileCloud folder.

You can also play back an audio file by opening it in a third-party app of your choice. See the instructions for opening a file from another application in the topic [FileCloud iOS Integration with 3rd Party Apps \(see page 275\)](#).

View iOS images

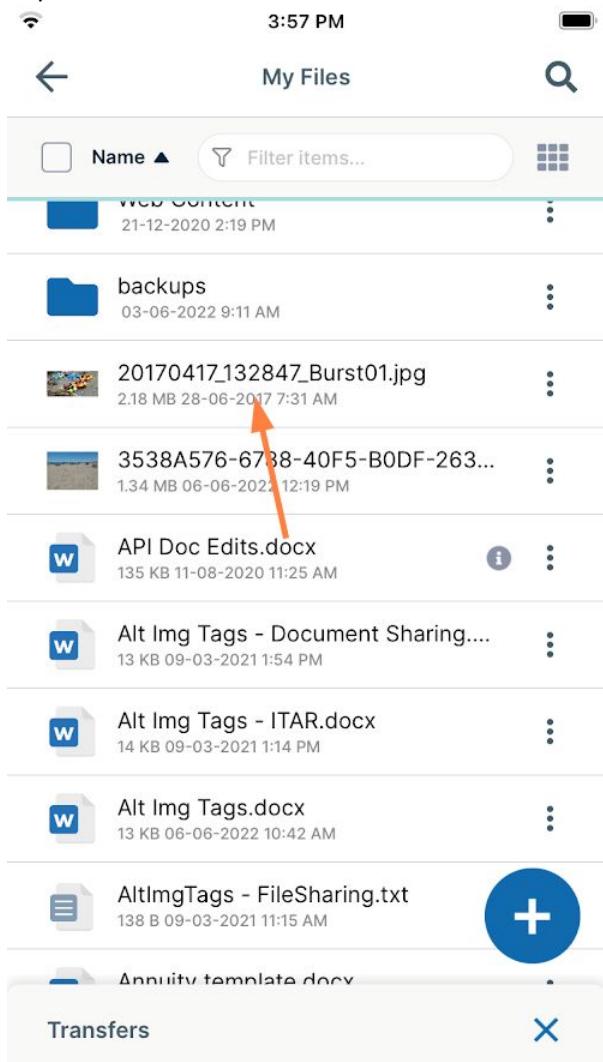

The following video formats are supported natively for viewing in the FileCloud iOS app:

- .jpg
- .jpeg
- .png
- .cr2
- .crw
- .pef
- .nef
- .arw

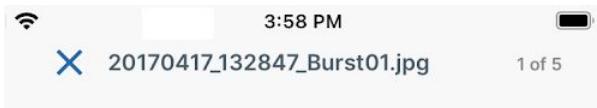

- .raf
- .gif
- .heic

To view an image file:

1. Tap the file.

The image opens for preview.

You can also preview or edit an image file by opening it in a third-party app of your choice. See the instructions for opening a file from another application in the topic [FileCloud iOS Integration with 3rd Party Apps](#)².

View iOS Video Files

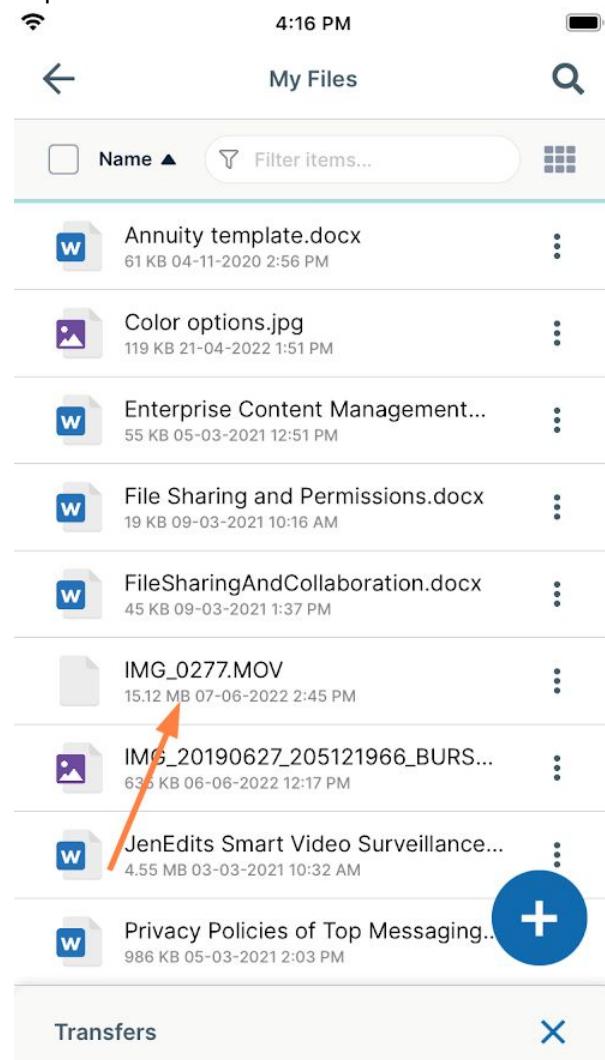

The following video formats are supported natively for viewing in the FileCloud iOS app:

2. <https://www.filecloud.com/supportdocs/display/FCDOC/.FileCloud+iOS+Integration+with+3rd+Party+Apps+v2V>

<ul style="list-style-type: none"> • .mov • .mp4 • .avi • .mpg • .mpeg • .vob • .mkv • .wmv • .xvid 	<ul style="list-style-type: none"> • .flv • .divx • .swf • .ogg • .gp3 • .mts • .m2ts • .m4v
--	--

To view a video:

1. Tap the video file.

The video begins playing.

2. Use the controls to stop or replay the file.
3. Tap X in the upper left to return to the FileCloud folder.

You can also preview or edit a video file by opening it in a third-party app of your choice. See the instructions for opening a file from another application in the topic [FileCloud iOS Integration with 3rd Party Apps³](#).

Download Files and Folders in iOS

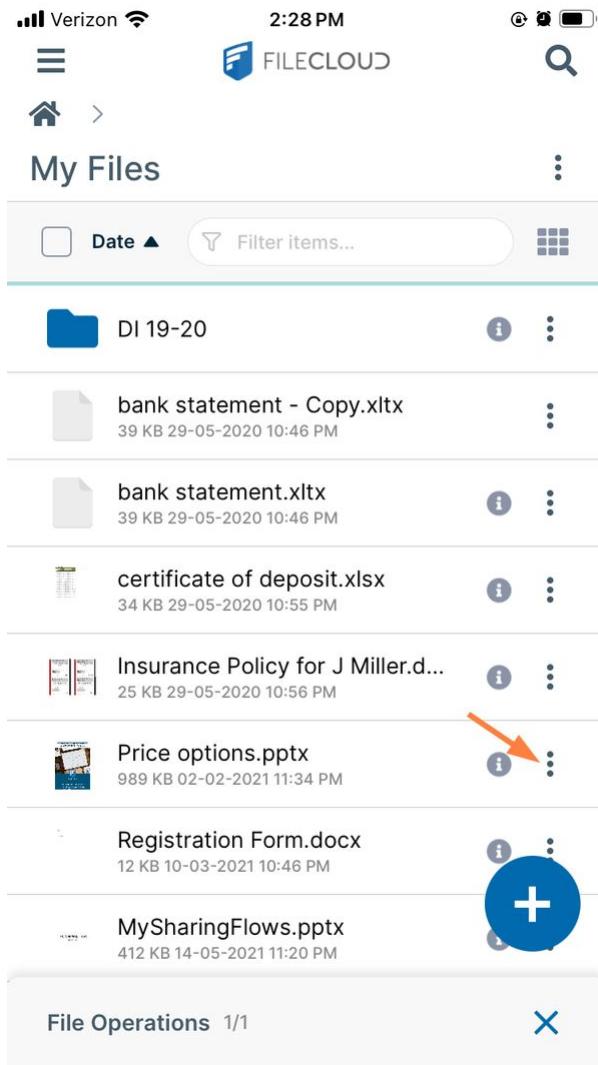

Files and Folders can be downloaded directly to the iOS device to allow access when there is no connectivity.

⚠ The FileCloud iOS App must be in foreground when the download is started; you may switch to another app while the download is in progress.

3. <https://www.filecloud.com/supportdocs/display/FCDOC/.FileCloud+iOS+Integration+with+3rd+Party+Apps+v2V>

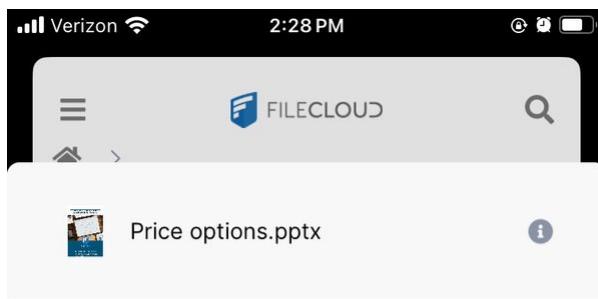

To download a file from the FileCloud Server:

Upload Files and Folders in iOS

The FileCloud iOS app supports uploading files from the following locations on your device:

- Local storage on your iOS device
- Cloud storage connected to your iOS device (for example, Google Drive)

💡 The time it takes to upload files to the FileCloud server varies depending on connection speed. You must also have sufficient privileges and storage space on the FileCloud server.

⚠️ The FileCloud iOS App must be in foreground when the upload is started; you may switch to another app while the upload is in progress.

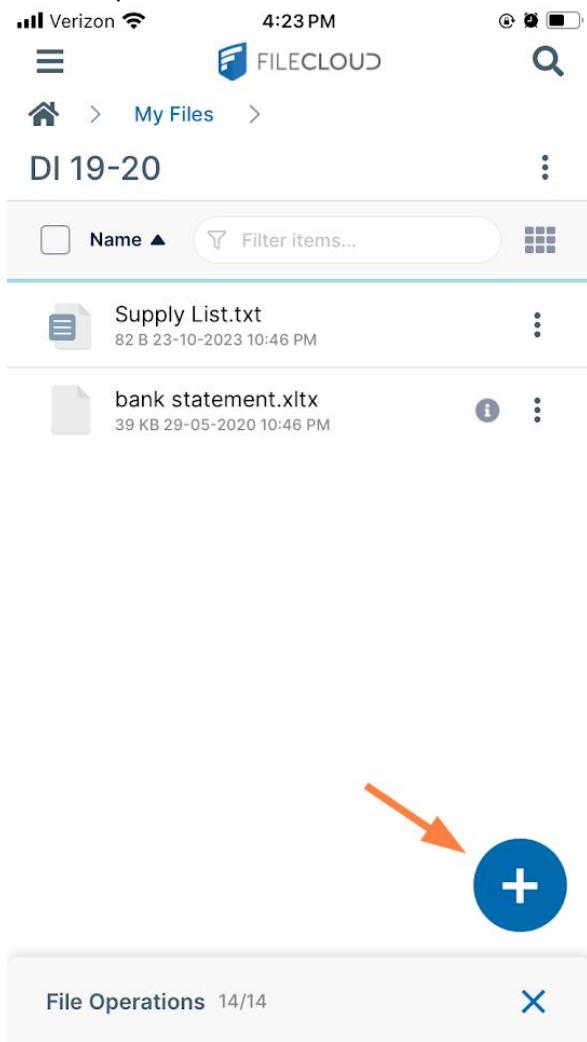

There are a few different ways to upload a file or folder to FileCloud.

Upload a file while you're in FileCloud by tapping the  icon:

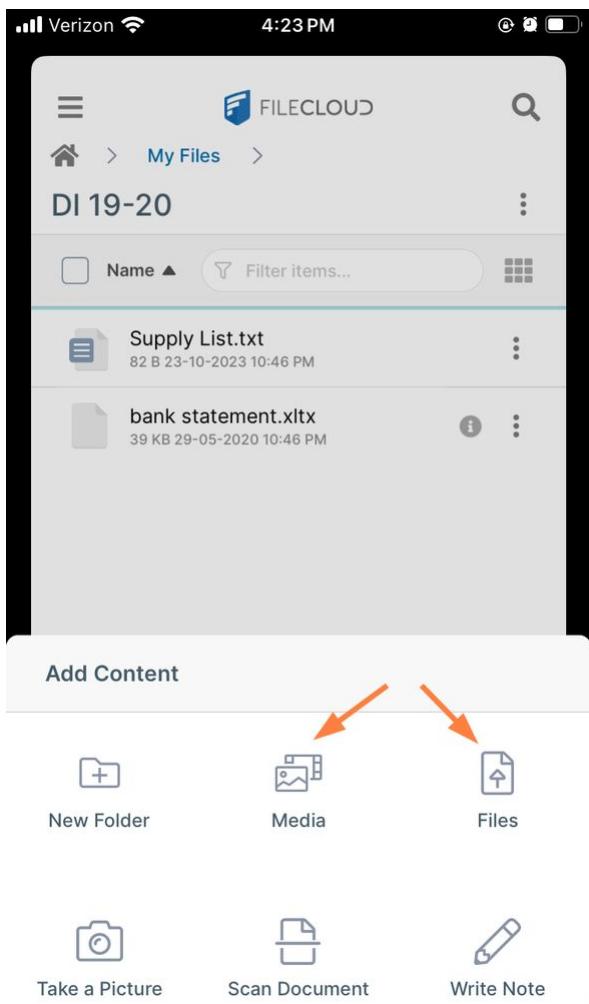

Upload by tapping the plus icon

If you have upload permission for a folder, a  icon appears on the screen when the folder is open.

1. Log in to the iOS app, and navigate to the folder that you want to upload the file or folder to.
2. Click the plus icon.

Various options for adding content pop up.

3. Tap **Media** to upload media files stored on your iOS device, or tap **Files** to upload files or folders from your iOS device or from a remote location.

Upload images or videos stored on your iOS device

The **Media** option enables you to upload image or video files stored on your device into the folder on FileCloud.

- a. After tapping the

icon, tap **Media**.

You are shown photos and videos stored on your device.

b. Tap the image or images that you want to upload, and click **Add**.

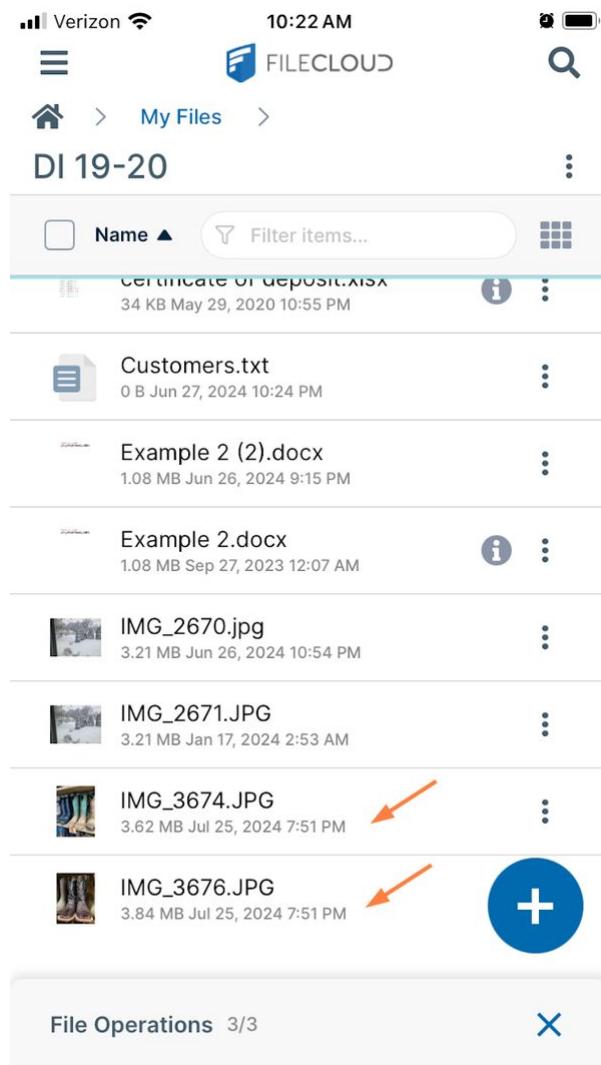

The File Operations window opens at the bottom of the screen and the progress of the upload appears on the **Transfers** tab.

Note: You can continue working while the upload is in progress.

The screenshot shows the FileCloud mobile application interface. At the top, there is a status bar with signal strength, the time (10:21 AM), and battery level. Below the status bar, the FileCloud logo is displayed. The main navigation bar shows the path: Home > My Files > DI 19-20. The current folder, DI 19-20, is displayed in bold. Below the navigation, there is a search bar with a 'Name' filter and a 'Filter items...' button, along with a grid icon. The file list shows three files: 'bank statement.xltx', 'certificate of deposit.xlsx', and 'bank statement (2).xlsx'. Each file has a preview icon, a file name, a size, a date, and a more options button. Below the file list, there is a 'File Operations' section with a dropdown showing '2/3'. Under 'File Operations', there are three tabs: 'Transfers (3)' (selected), 'Operations (0)', and 'Syncs (1)'. A 'Filter transfers...' input field is present. Below this, there is a list of two transferred files: 'IMG_3676.JPG' (3.8 MB) and 'IMG_3674.JPG' (3.6 MB). The 'IMG_3676.JPG' file is currently being processed, indicated by a progress bar. The 'IMG_3674.JPG' file is marked as 'Upload complete' with a checkmark icon. Each transferred file has a preview icon, a file name, a size, and a more options button.

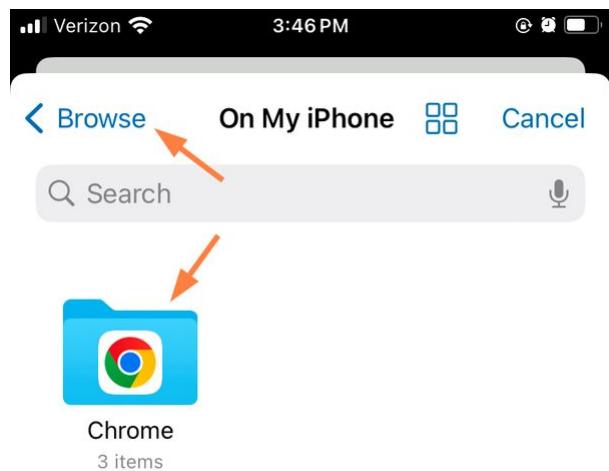

The files are uploaded into the opened folder.

Upload files from local and remote locations

The Files option lets you upload files or folders from local or remote locations accessible from your iOS device.

- After tapping the  icon, tap **Files**.
The last location accessed opens.
- Change the location by tapping **Browse** or search for a file in the opened location (**On My iPhone** in the following image) .

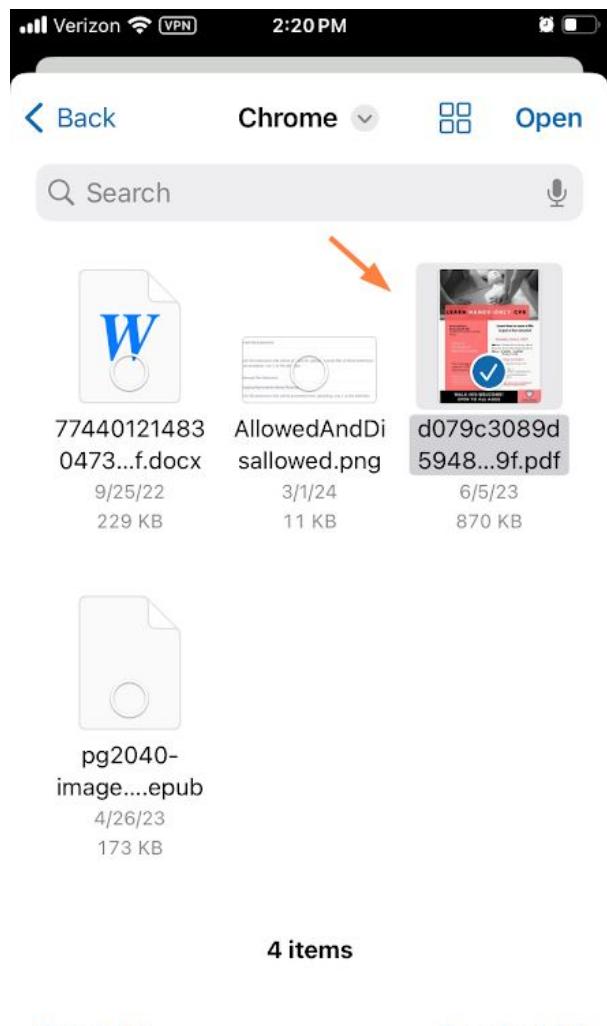

1 item

The locations available may be both local and remote.

- c. In this example, open the **Chrome** folder in **On my iPhone**.
The screen displays the items in the folder.
- d. Tap the item that you want to upload, and tap **Open**.

Verizon 2:20 PM

Back Chrome Open

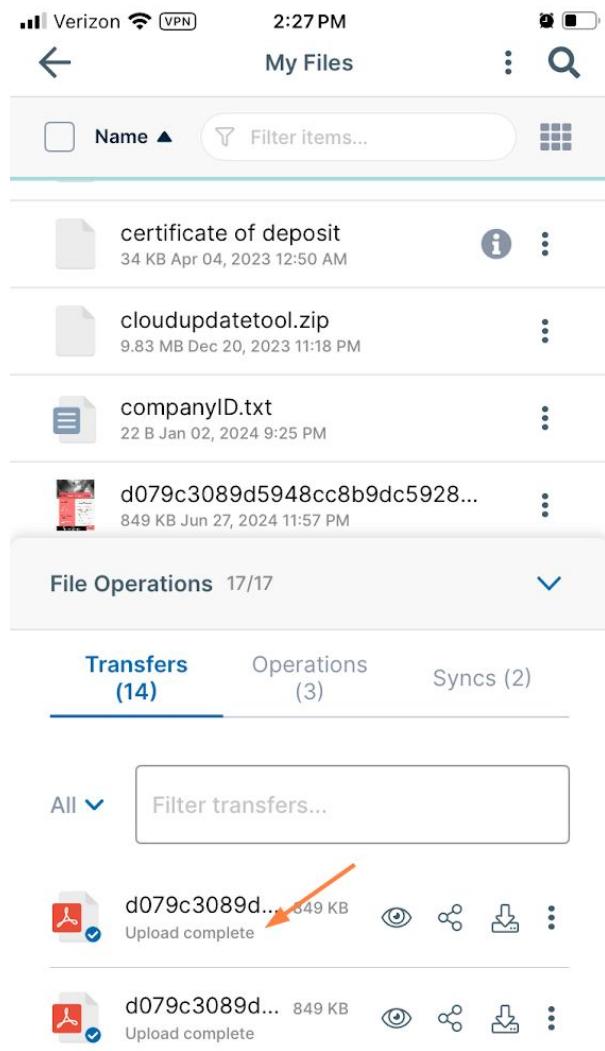

Search

File ID	File Name	Upload Date	Size
77440121483	0473...f.docx	9/25/22	229 KB
	AllowedAndDisallowed.png	3/1/24	11 KB
	d079c3089d5948...9f.pdf	6/5/23	870 KB
	pg2040-image....epub	4/26/23	173 KB

4 items

Select All Deselect All

A **Files Operations > Transfers** pop-up shows you upload progress.

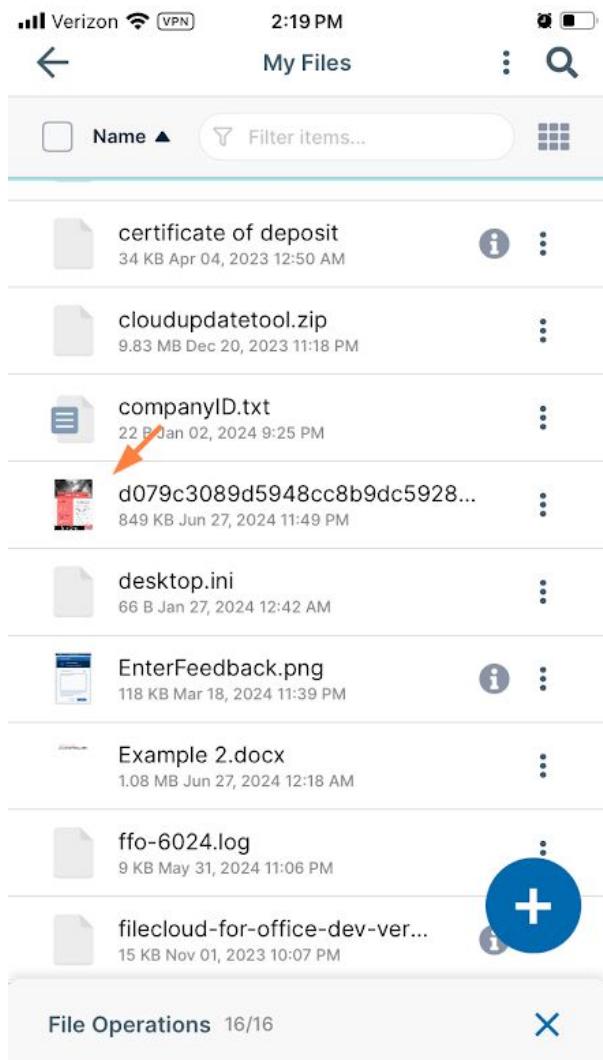

The screenshot shows the FileCloud Online mobile application interface. At the top, there is a status bar with signal strength, 'Verizon', 'VPN', and battery level. The main header is 'My Files' with a back arrow, search icon, and a three-dot menu. Below the header is a toolbar with a 'Name' sort button (currently 'Name ▲'), a 'Filter items...' search bar, and a grid icon. The main content area displays a list of files:

- certificate of deposit (34 KB, Apr 04, 2023 12:50 AM) with info and three-dot menu icons
- clouddatetool.zip (9.83 MB, Dec 20, 2023 11:18 PM) with info and three-dot menu icons
- companyID.txt (22 B, Jan 02, 2024 9:25 PM) with info and three-dot menu icons
- d079c3089d5948cc8b9dc5928... (849 KB, Jun 27, 2024 11:57 PM) with info and three-dot menu icons

Below the file list is a 'File Operations' section showing '17/17' with a dropdown arrow. Under 'File Operations' are three tabs: 'Transfers (14)' (selected), 'Operations (3)', and 'Syncs (2)'. The 'Transfers' tab shows a list of transfers:

- All (selected) with a dropdown arrow and a 'Filter transfers...' search bar.
- d079c3089d5948cc8b9dc5928... (849 KB) marked as 'Upload complete' with a checkmark icon. An orange arrow points to this file.
- d079c3089d5948cc8b9dc5928... (849 KB) marked as 'Upload complete' with a checkmark icon.

The file is uploaded:

Upload while in another app

Upload files from third-party applications

On an iOS device, when you are working in another app, you can remain in that app and save a file to FileCloud.

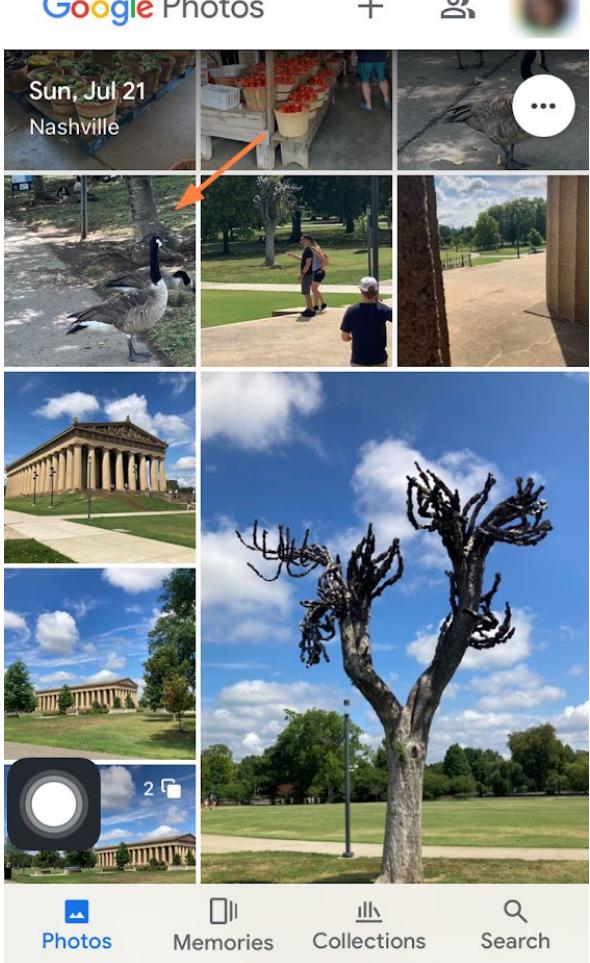

If you have opened an existing FileCloud file in an Office app for edit, your changes are automatically saved to FileCloud. See [Preview and Edit iOS Files](#) (see page 26).

The following example uses Google Photos to demonstrate how to save files to FileCloud from another app, however, you could use the same process in any app that allows you to save to other apps.

To upload from a 3rd-party application:

1. Open the file in the other app on your iOS device.
Here, in Google Photos, tap on the photo to open it.

Verizon 3:48 PM

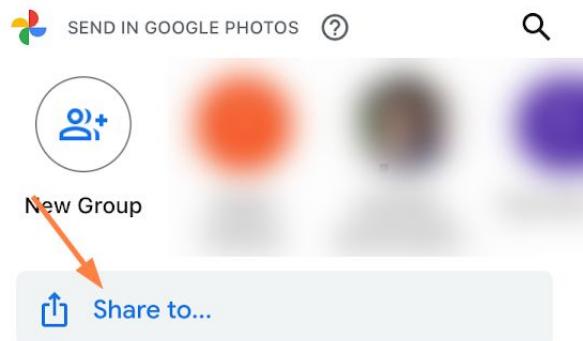

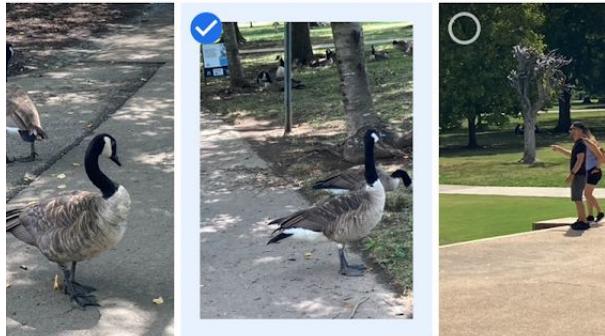

2. Depending on the app, the action to choose may be upload, share, or save.

In Google Photos, after selecting the photo, tap **Share to**.

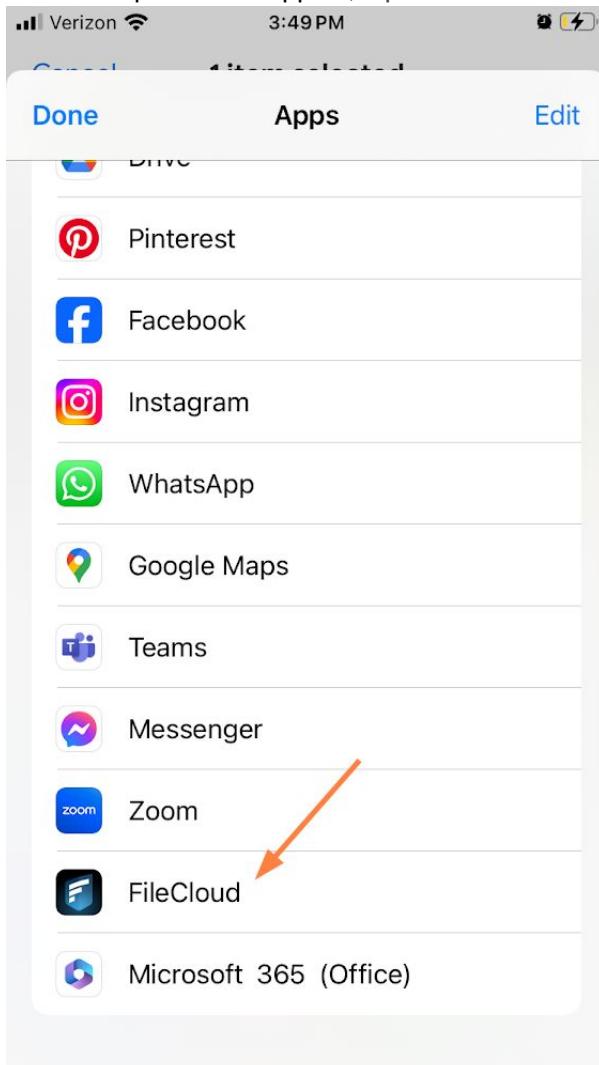

Verizon 3:48 PM

Cancel

1 item selected

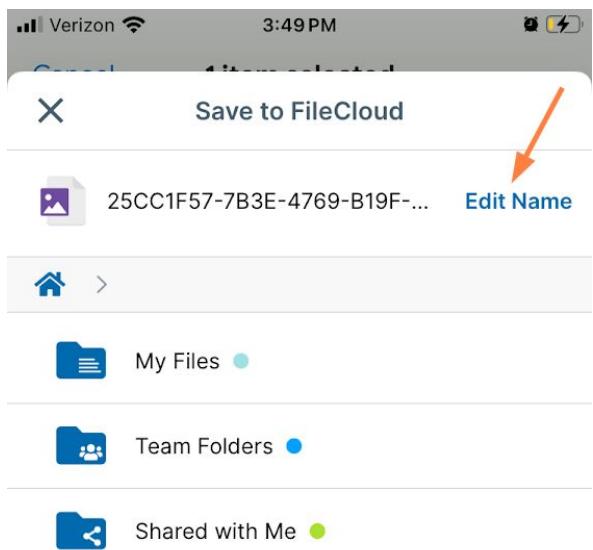

3. From the options that appear, tap **FileCloud**.

The **Save to FileCloud** screen opens. (If your FileCloud login credentials are not saved in iOS, you are prompted to log in to FileCloud first).

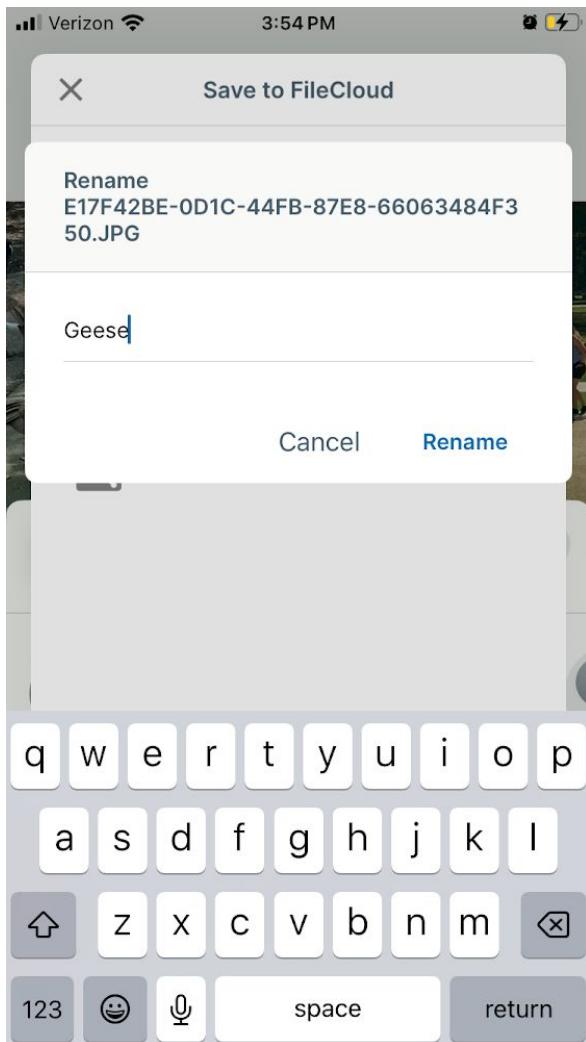

You are given the option of editing the filename before you save it to FileCloud.

4. To change the filename, tap **Edit Name**.

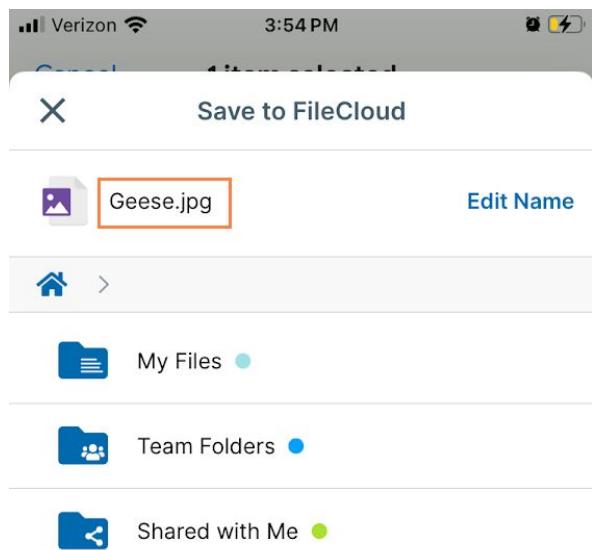

Select a save destination

5. Enter a new name for the file and tap **Rename**.

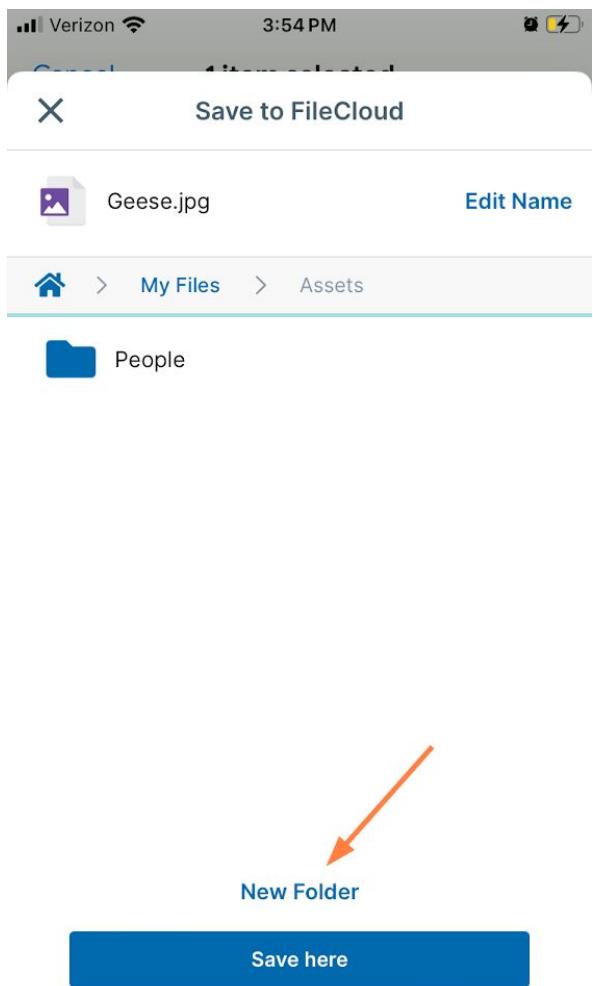

The file is renamed.

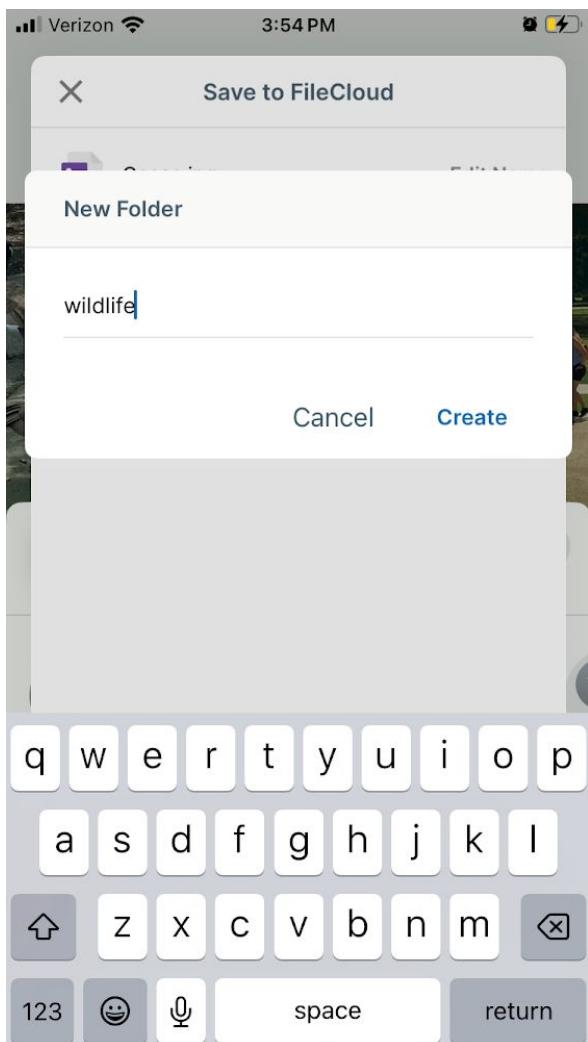

Select a save destination

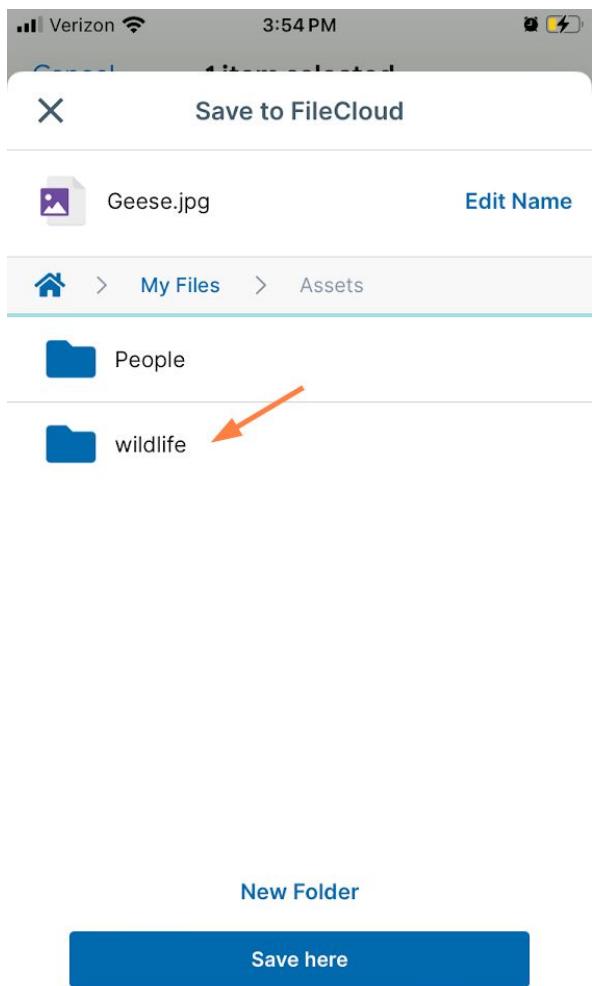

6. Navigate to the FileCloud folder where you want to save the file.
7. To create a new sub-folder for storing the file, tap **New Folder**.

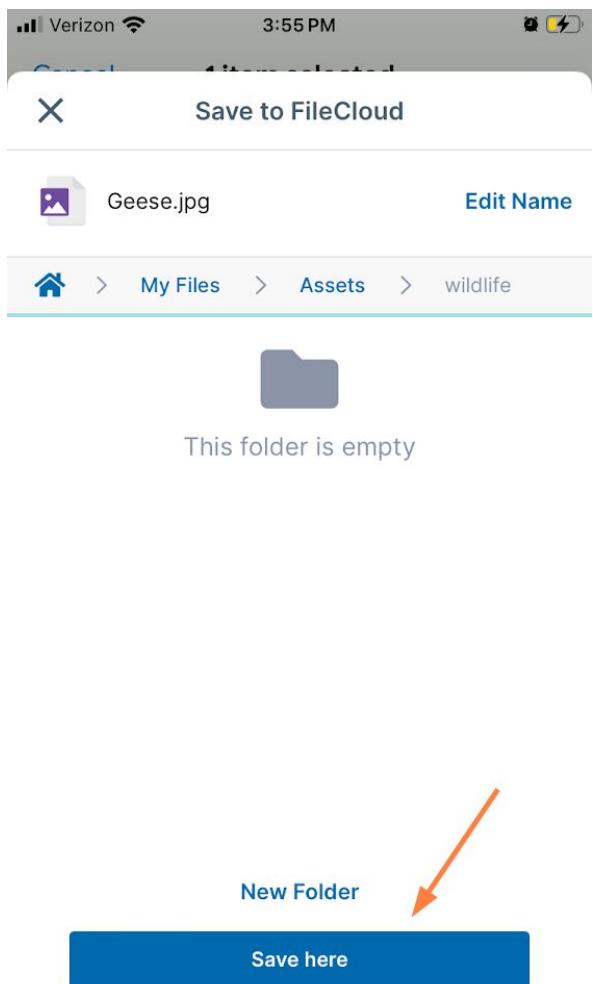

8. Enter a name for the new folder and tap **Create**.

9. Tap the new folder to open it for storing the uploaded file.

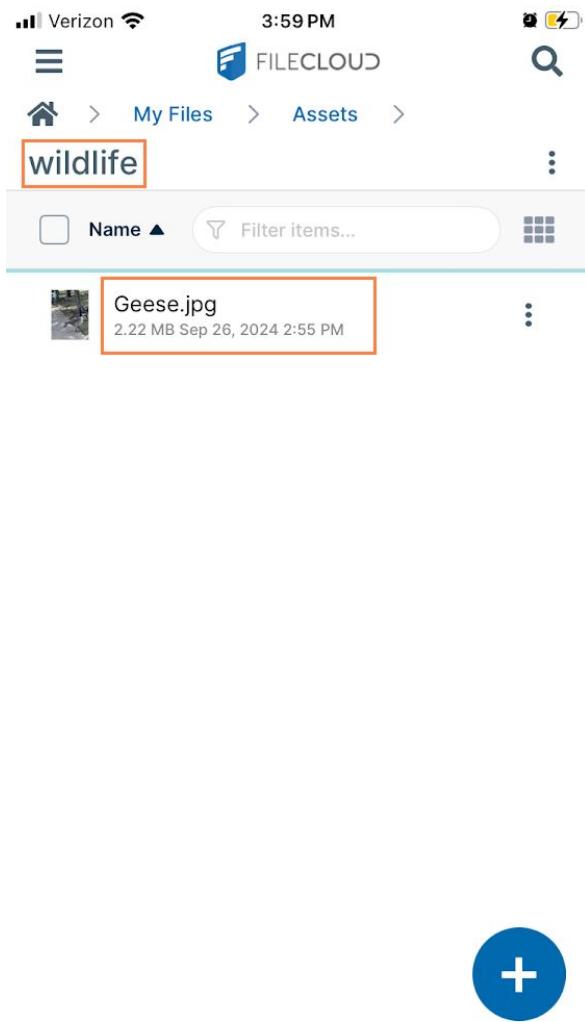

10. Tap **Save here**.

The file is saved in the folder.

To confirm that the file has been saved with the correct folder and filename, open the FileCloud app and navigate to the folder you stored it in.

Please note the following restrictions when uploading files to FileCloud:

- Files with the same name:
 - If you upload a file with the same name and the same case as another file in the same folder, it overwrites the file.
 - If you upload a file with the same name but a different case than another file in the same folder, you cannot upload the file and the File Operations window displays a file name conflict message.
 - If you upload files with the same name but different file extensions, like **myfile.doc** and **myfile.docx**, they are treated as different files.
- FileCloud cannot upload files with leading spaces in the filename.
- By default, files with the extensions **php**, **php5**, **phar**, and **phtml** cannot be uploaded into FileCloud.

**For Admins**

- To specify which file extensions may be uploaded into FileCloud, see [Managing File Extensions and Restricting File Extensions](#).
- To restrict certain filenames from being uploaded into FileCloud, see [Restricting File Names](#).

Create New Files and Folders in iOS

While you are working in the FileCloud iOS app, various methods are provided to you for creating new files and folders.

To access one of these methods, tap the  icon:

- [Add a folder \(see page 81\)](#)
- [Enter text and save it as a .txt file \(see page 85\)](#)
- [Take a photo and save it as a .jpg file \(see page 90\)](#)
- [Scan a file and save it as a .pdf or .jpg file \(see page 94\)](#)

Create New Folders in iOS

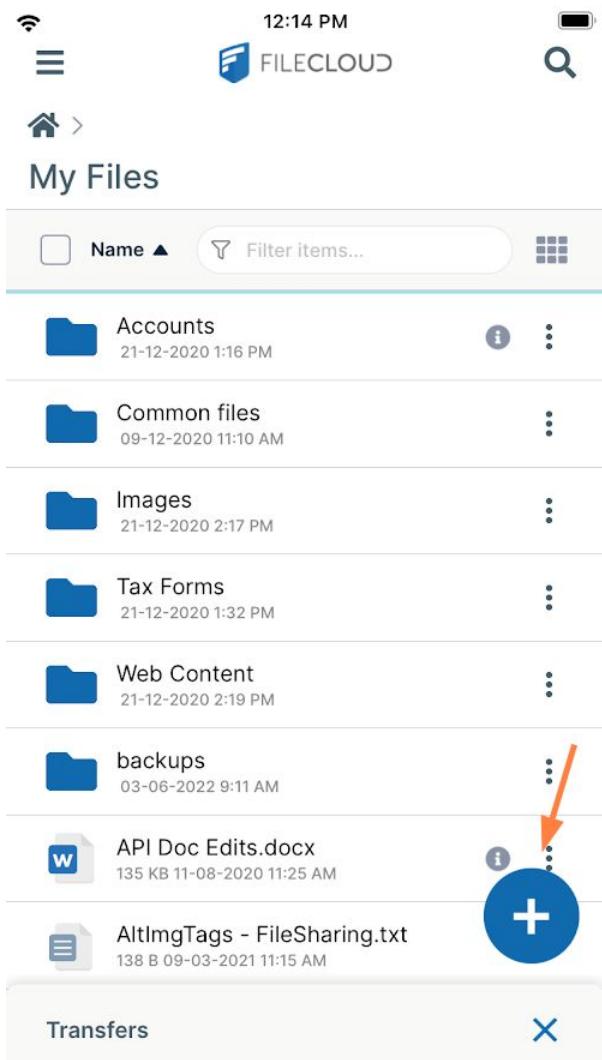

While you are working in the FileCloud iOS app, you can add a new folder to My Files or any of its sub-folders.

1. Go to My Files or navigate to a My Files sub-folder.

2. Tap

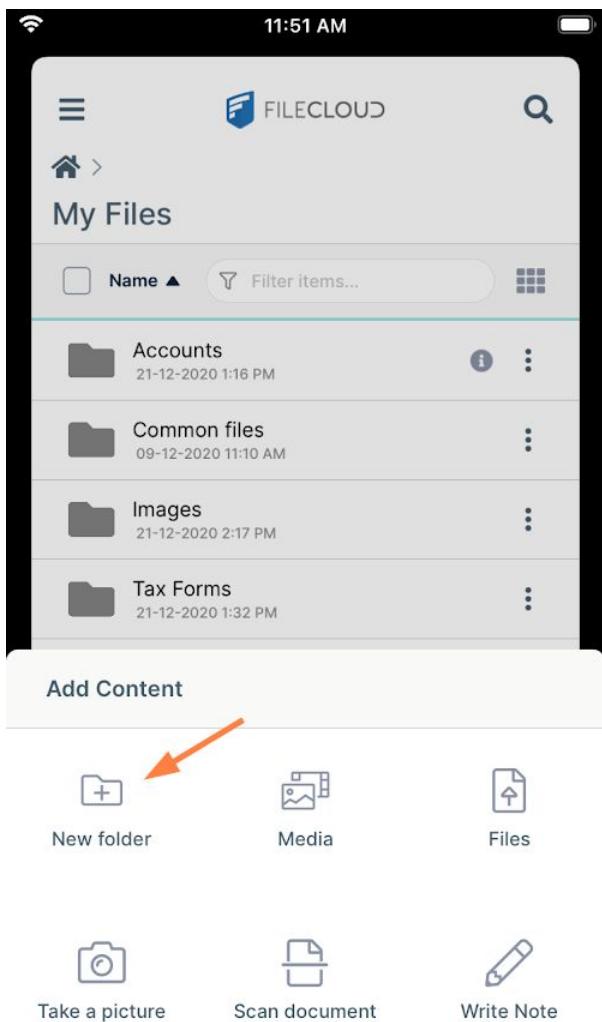

.

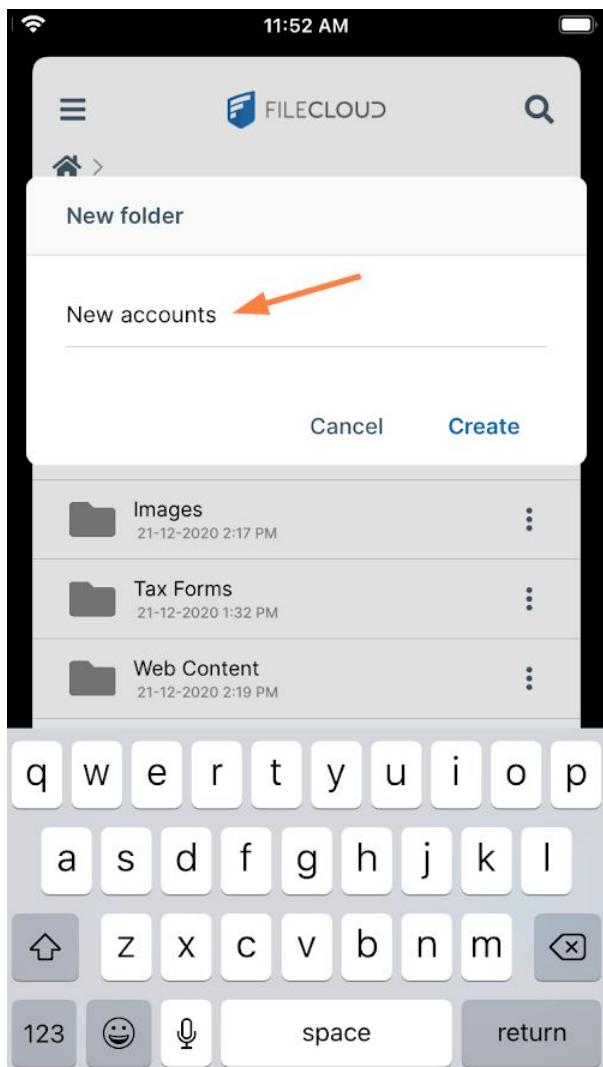

Add Content options open.

3. Tap **New Folder**.

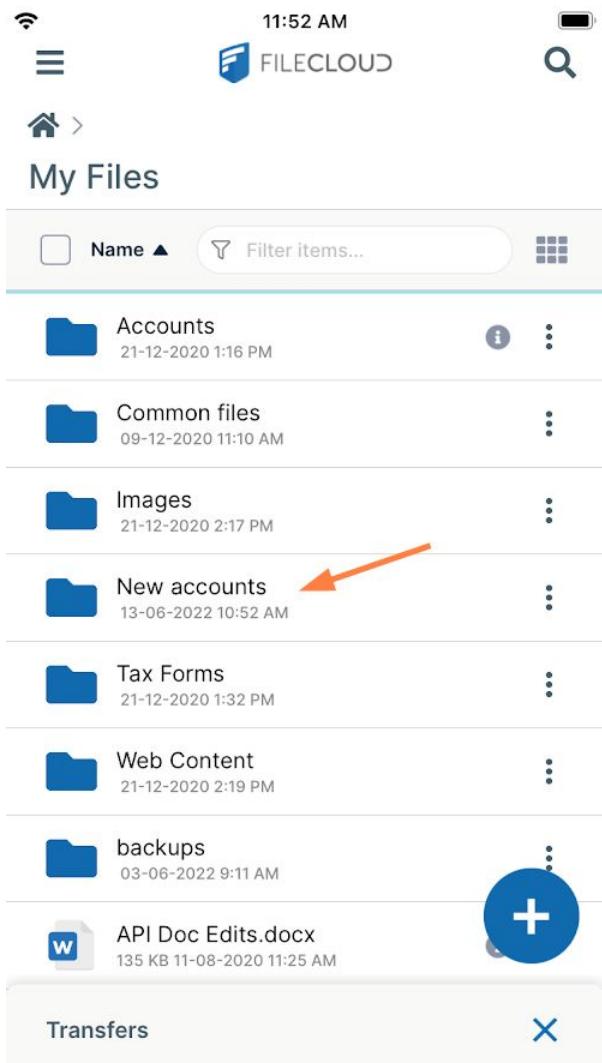

A dialog box opens.

4. Enter a name for the new folder.

5. Tap **Create**.

The new folder appears in FileCloud.

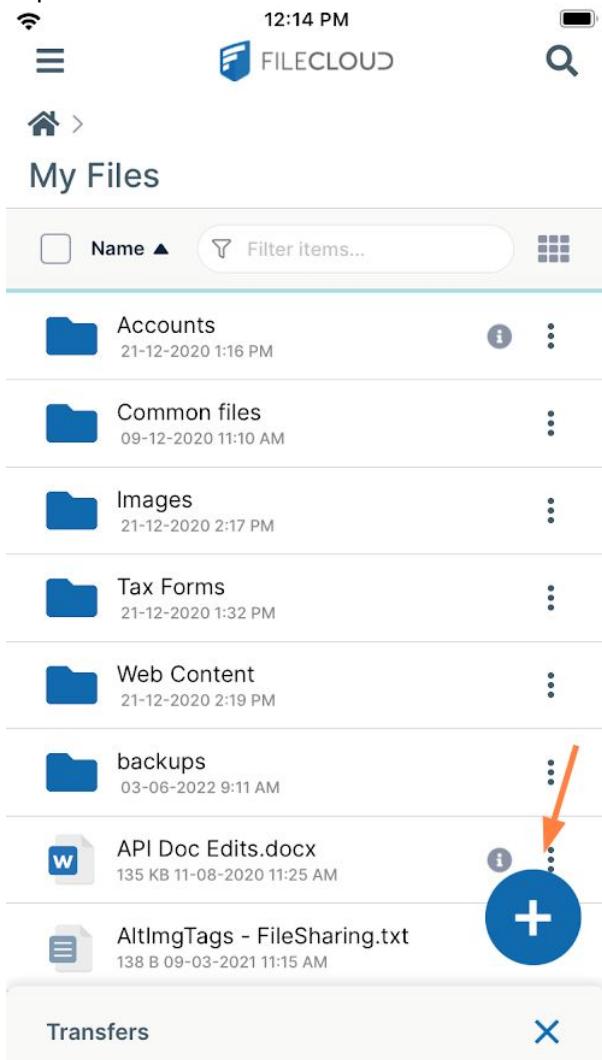

Create Text Files in iOS

While you are working in the FileCloud iOS app, you can create a new text file.

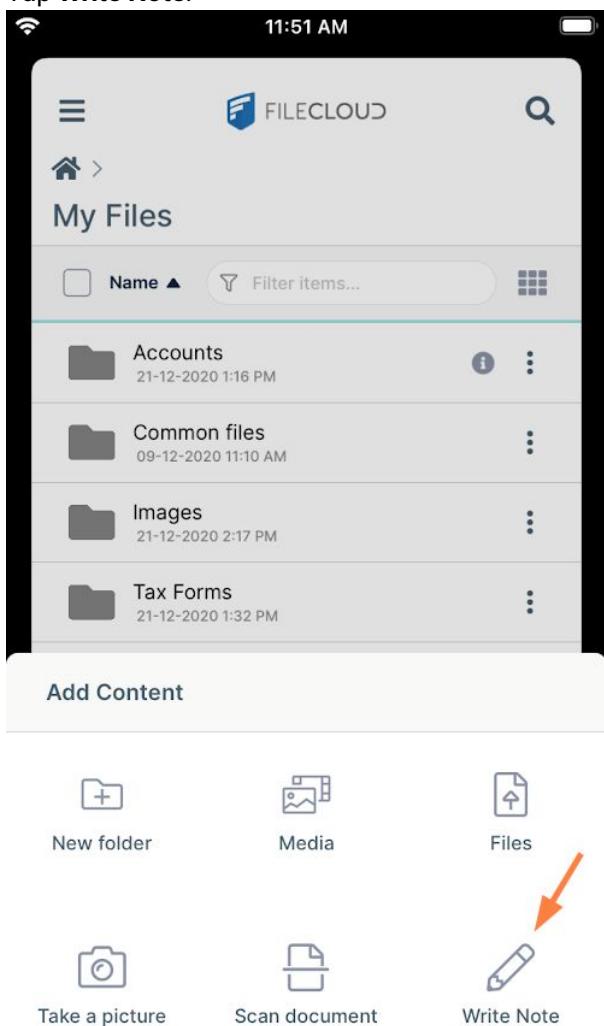

1. Go to My Files or navigate to a My Files sub-folder.

2. Tap .

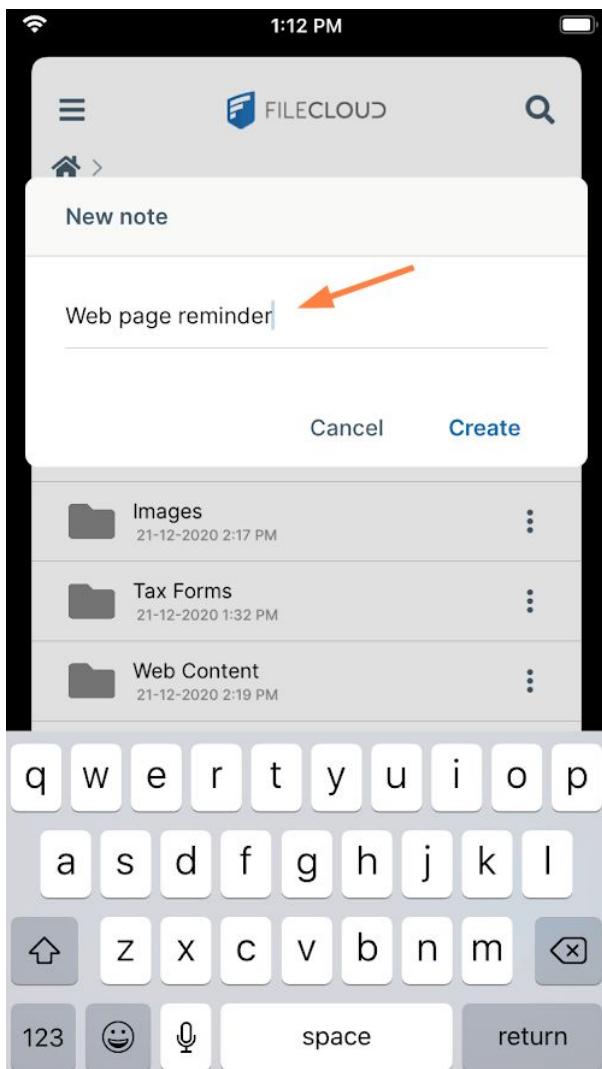

Add Content options open.

3. Tap **Write Note**.

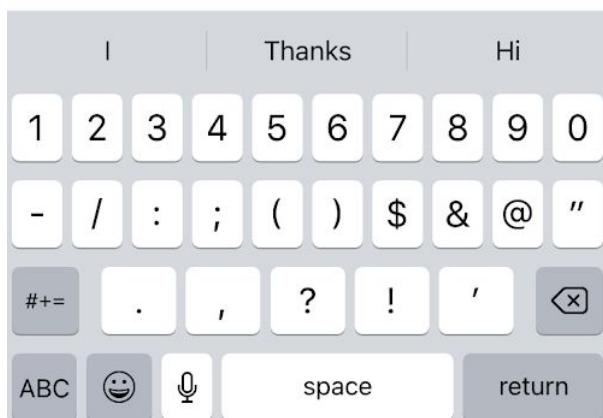

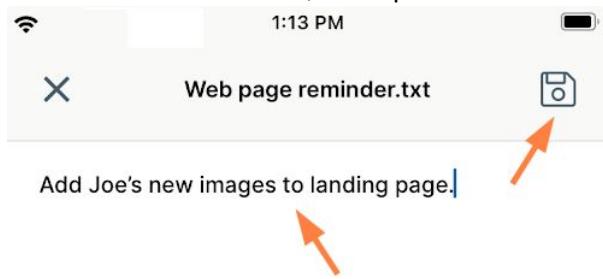

A **New Note** dialog box opens. Enter a name for the file, and tap **Create**.

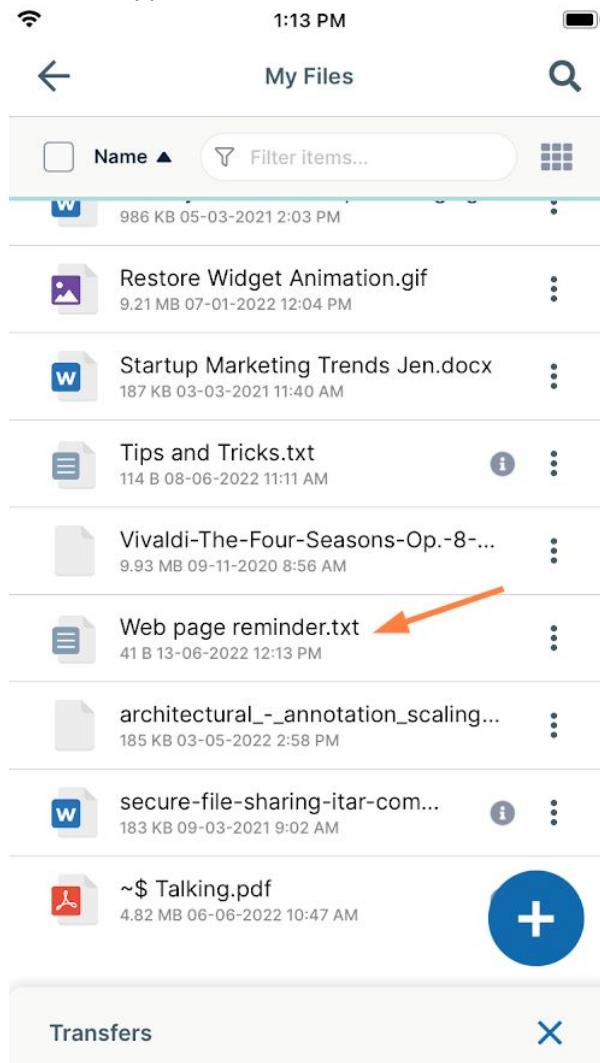

The file opens.

4. Enter the text for the note, and tap the save icon.

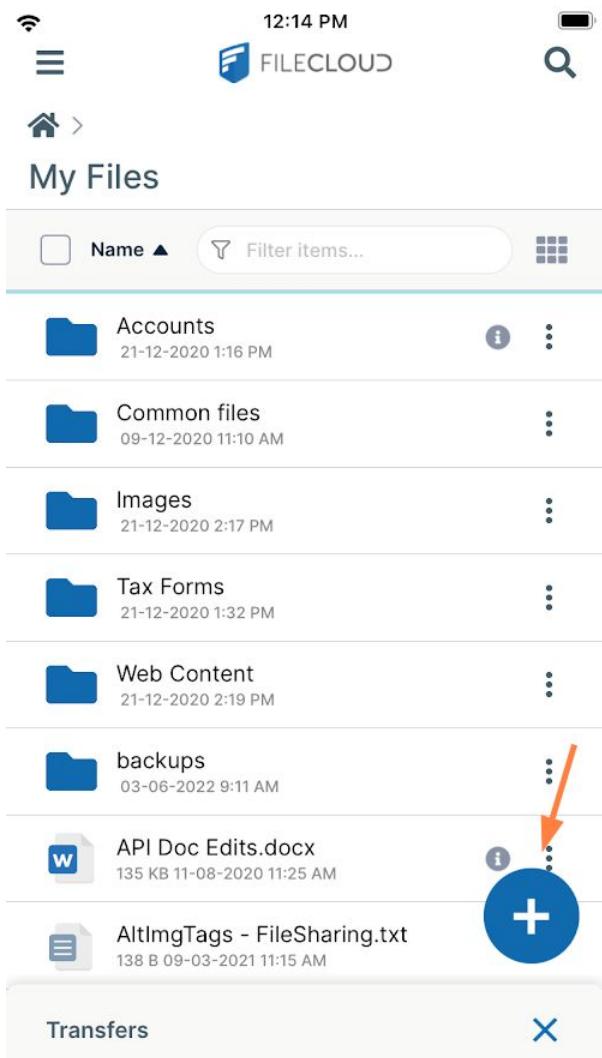

The note appears as a new text file in FileCloud.

Snap and Save a Picture in iOS

While you are working in the FileCloud iOS app, you can take a picture and add it to FileCloud as a .jpg file.

1. Go to My Files or navigate to a My Files sub-folder.
2. Tap

12:14 PM

FILECLOUD

Transfers X

Add Content options open.

3. Tap **Take a picture**.

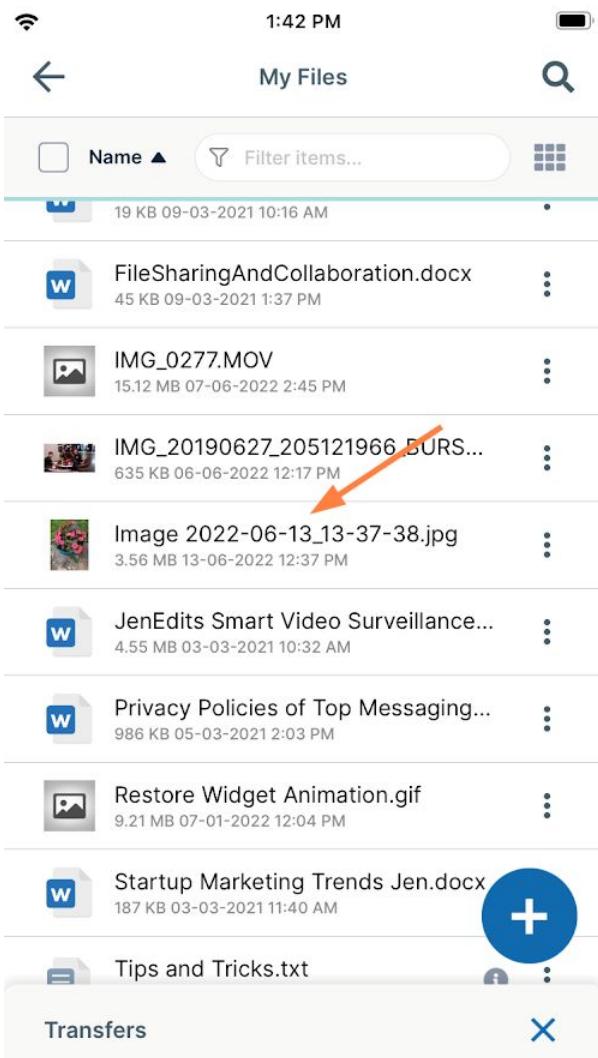

Your phone's camera opens.

4. Take and save the photo.

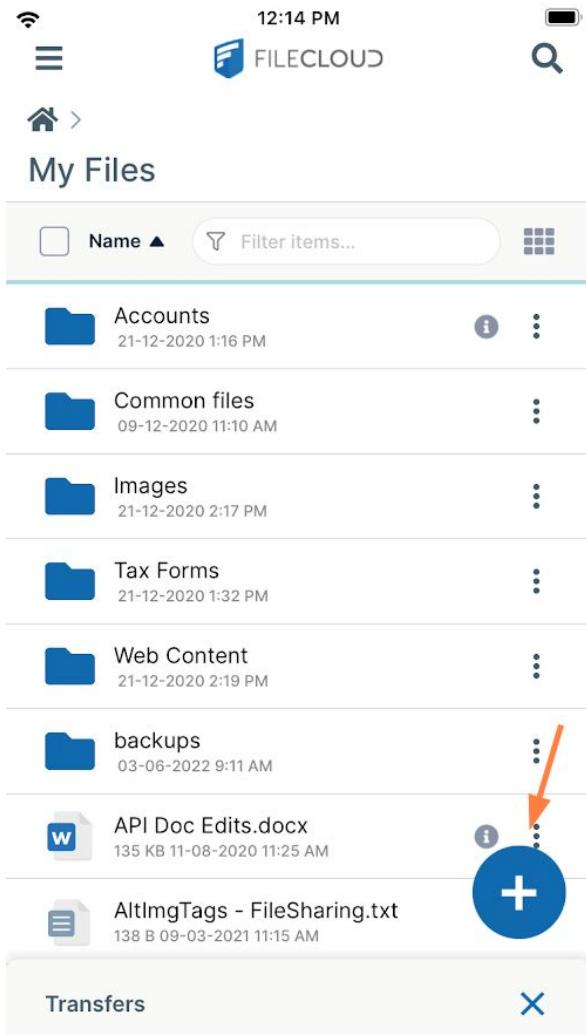

The photo is saved as a .jpg file in FileCloud.

Scan a Document from iOS

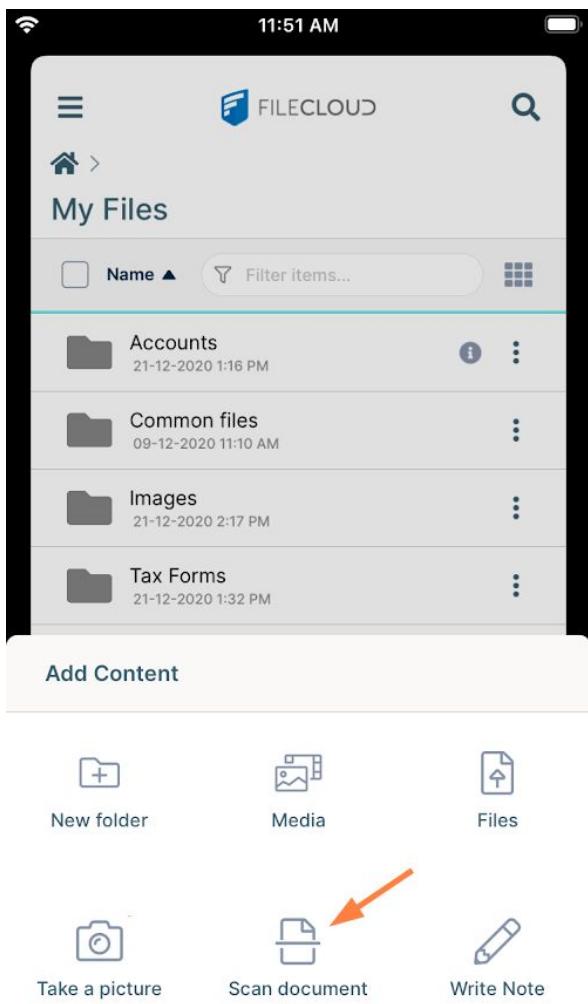

While you are working in the FileCloud iOS app, you can use your phone to scan a document and add it to FileCloud as a .pdf or .jpg file.

1. Go to My Files or navigate to a My Files sub-folder.
2. Tap .

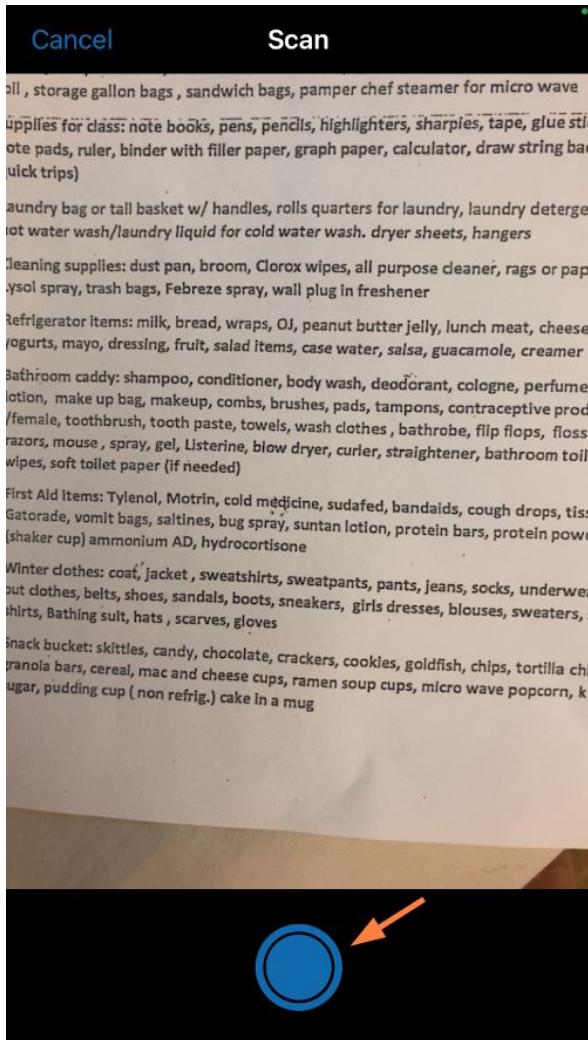

Add Content options open.

3. Tap **Scan document**.

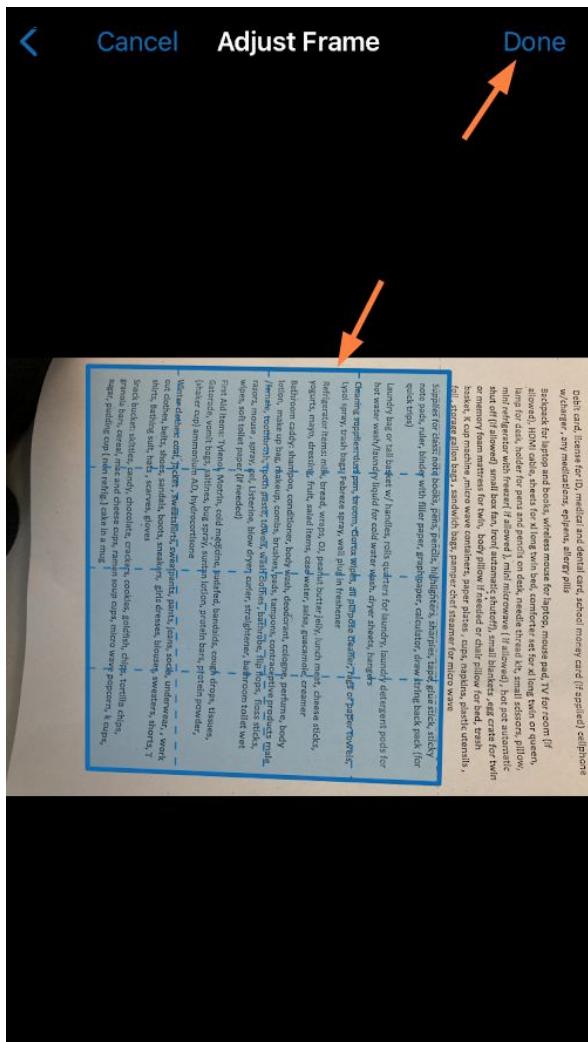

A scan screen opens.

4. Position the document, and tap the button to scan it.

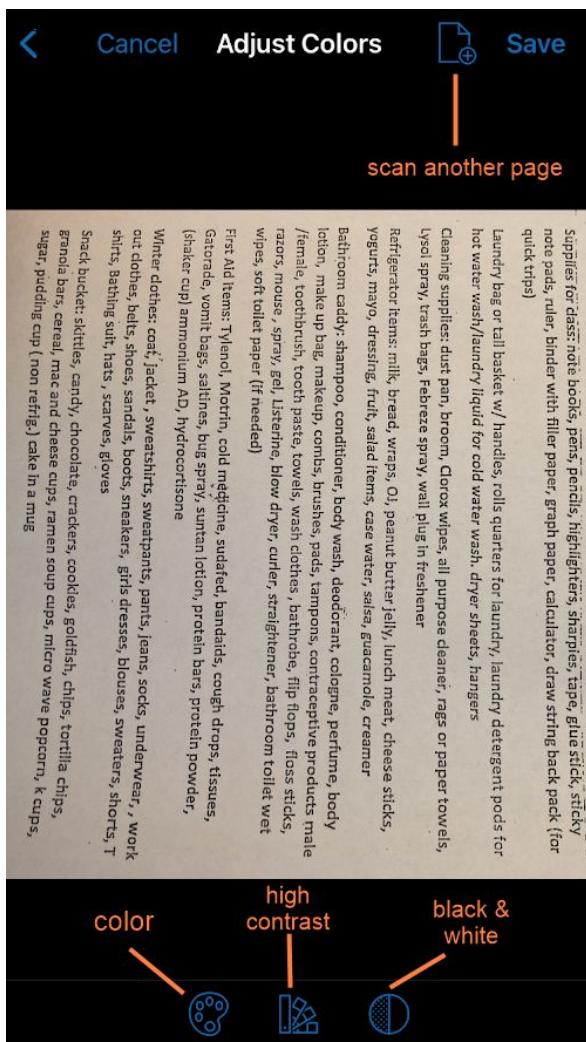

The screen prompts you to adjust the borders.

5. Tap and move the borders until you have selected the text you want to scan, and then tap **Done**.

The screen prompts you to change colors.

6. If you want to change the colors or contrast, use the buttons at the bottom of the screen.
7. If you want to scan another page, tap the Page+ icon at the top of the screen.

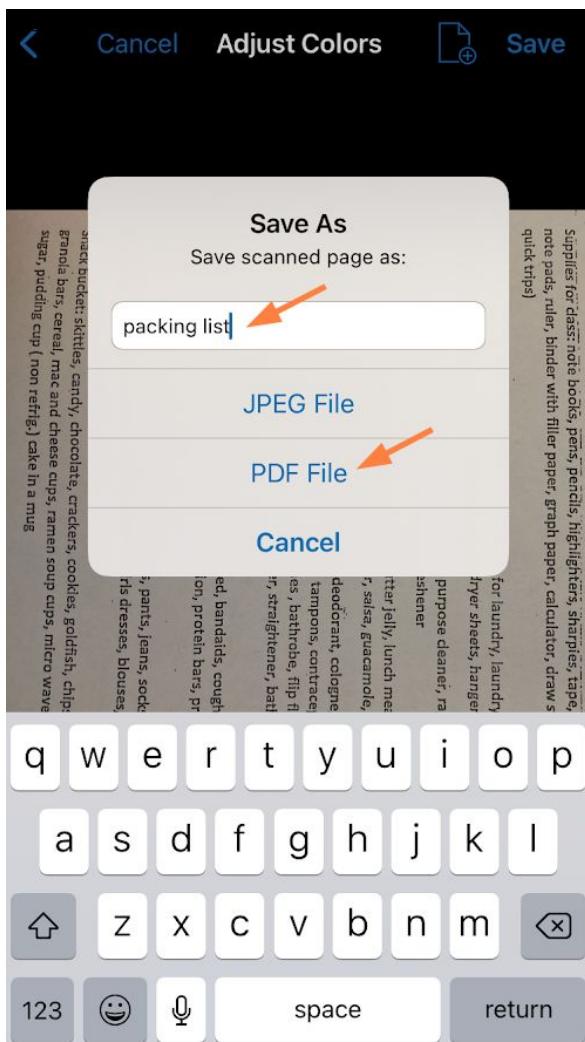

8. Tap **Save**.

You are prompted to give the scanned file a name.

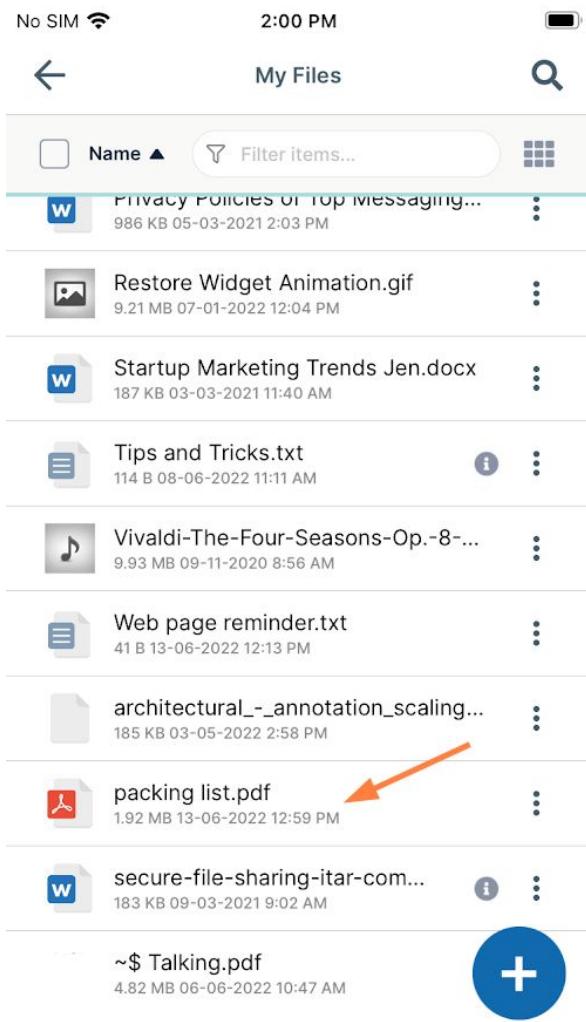

9. Enter a name for the file.

If you have only scanned one page, you can choose to save as a .jpg or .pdf.

If you have scanned multiple pages, you can only save as a .pdf.

The file is saved in FileCloud.

Share an iOS File

The following options are available for sharing:

- **Allow anyone with link** (Public Share). No FileCloud account required.
- **Anyone anyone with link and a password** (Protected Public Share). No FileCloud account required.
- (Default) **Allow selected users or groups** (Private share). FileCloud account required. The shared files will appear in the **Shared with Me** folder.
- If the file is available for viewing in the Secure Web Viewer: **Allow anyone with secure web viewer link and a password**. No FileCloud account required.

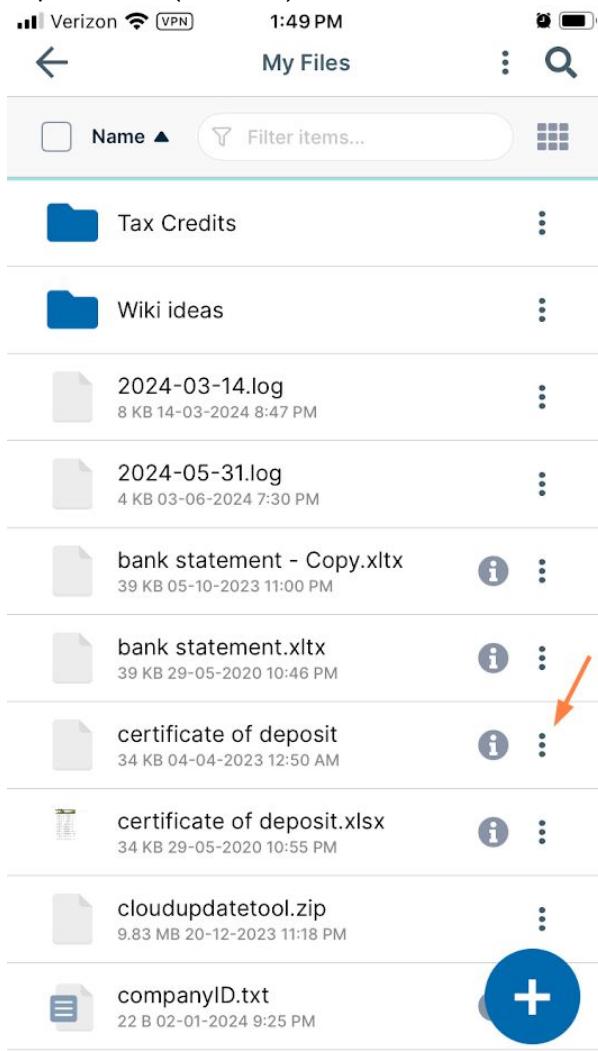

In addition, it is possible to control the access to the shared resource with read, write, or share permissions.

You can use the FileCloud app to share files on your mobile device with others. You can:

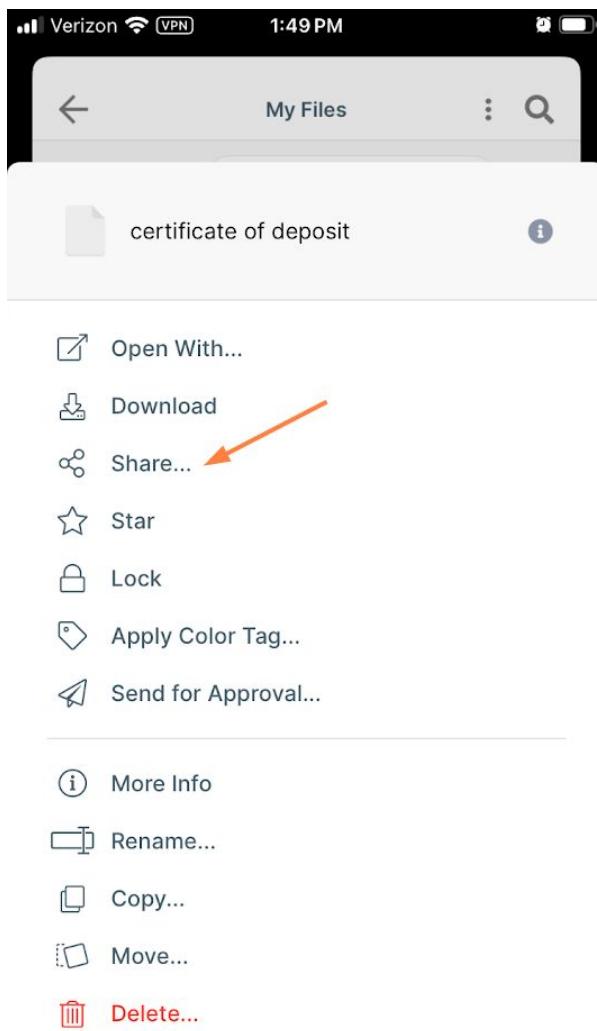

- Create a direct link to the file. This link can be sent via email to anyone who needs access to that resource.
- Let FileCloud notify the users who you add to the share.

To share a file:

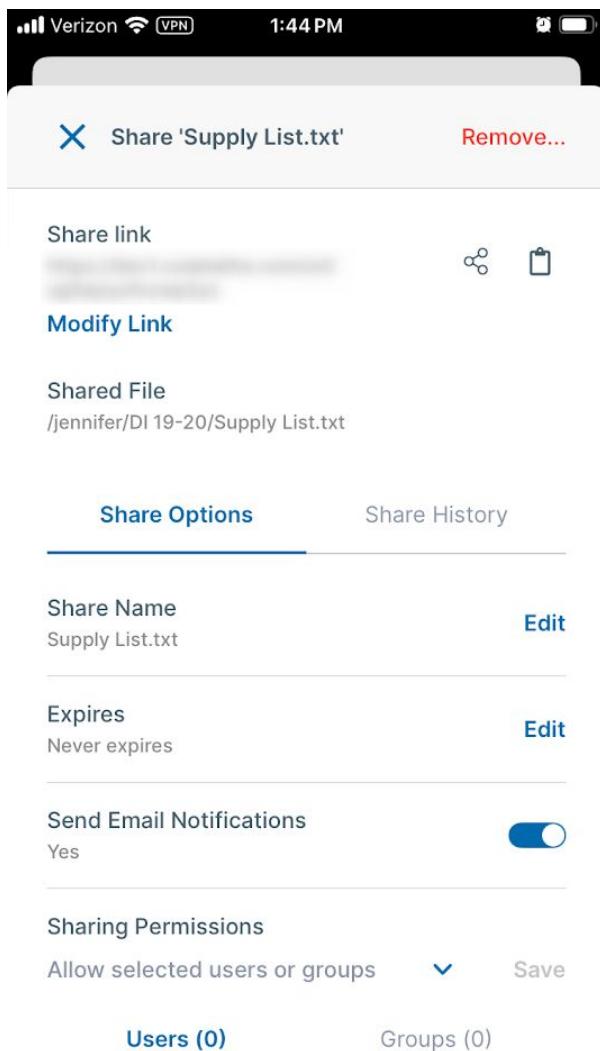

1. Open the FileCloud app.
2. Navigate to the file you want to share.
3. Tap the more (three dot) icon next to the file or folder.

4. Tap **Share**.

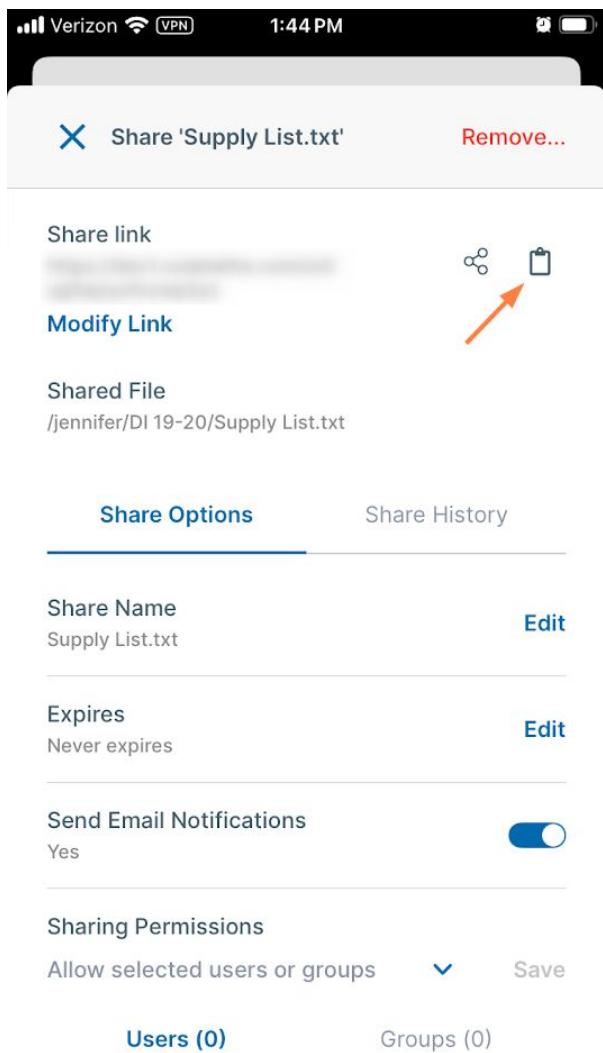

The file is shared privately although share recipients have not been added yet. Options appear for accessing the share options and copying the share link.

**To copy the share link:**

To copy the file share link:

1. Tap the Copy icon.

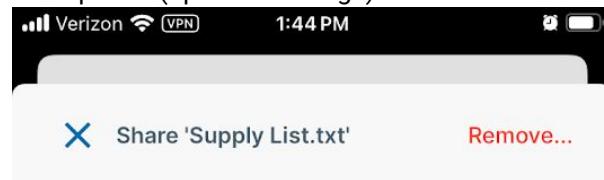

The screen displays the message **Share link copied**.

2. Paste the link into an email or text message and send it.

To change share options:

The options (optional settings) for a share are listed under **Share Options**.

Share link  

[Modify Link](#)

Sharing Permissions
Allow selected users or groups  

[Users \(0\)](#) [Groups \(0\)](#)

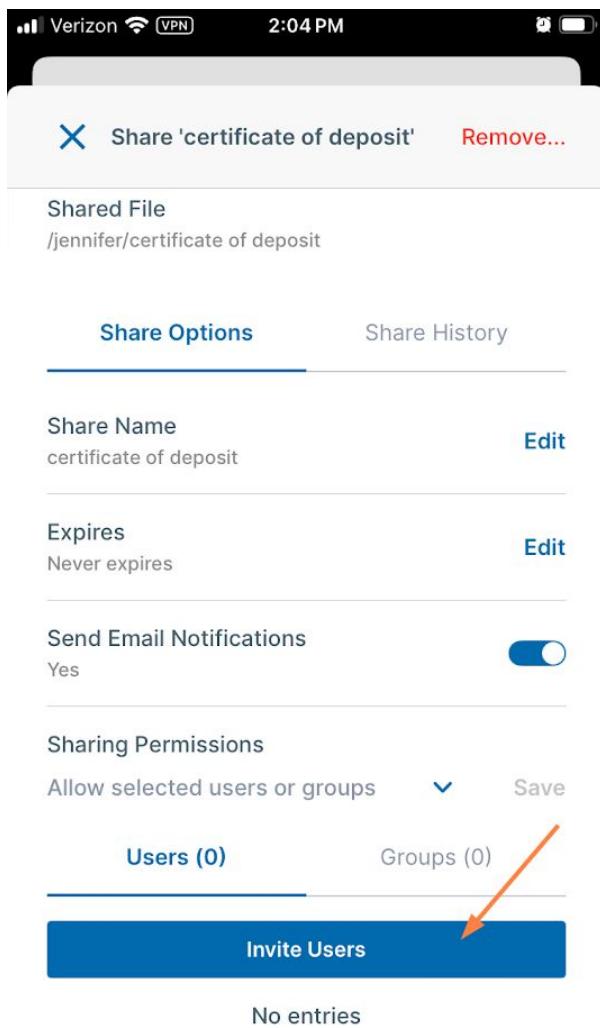

For information on setting share options, see:

- [Public Share Options for Files](#)
- [Private Share Options for Files](#)

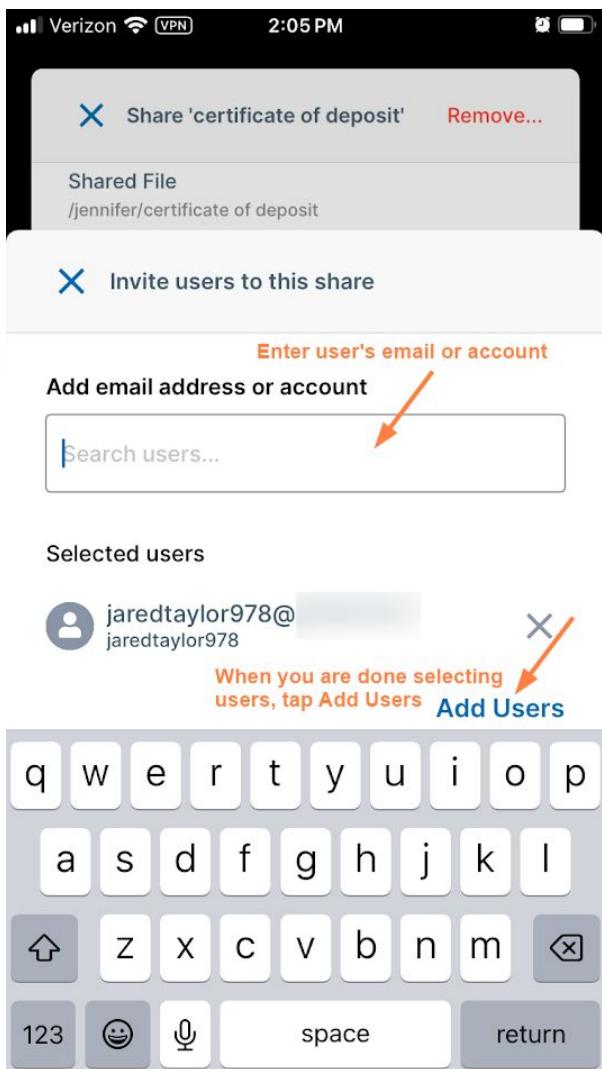

To add users to a private share:

To add a user to a private share:

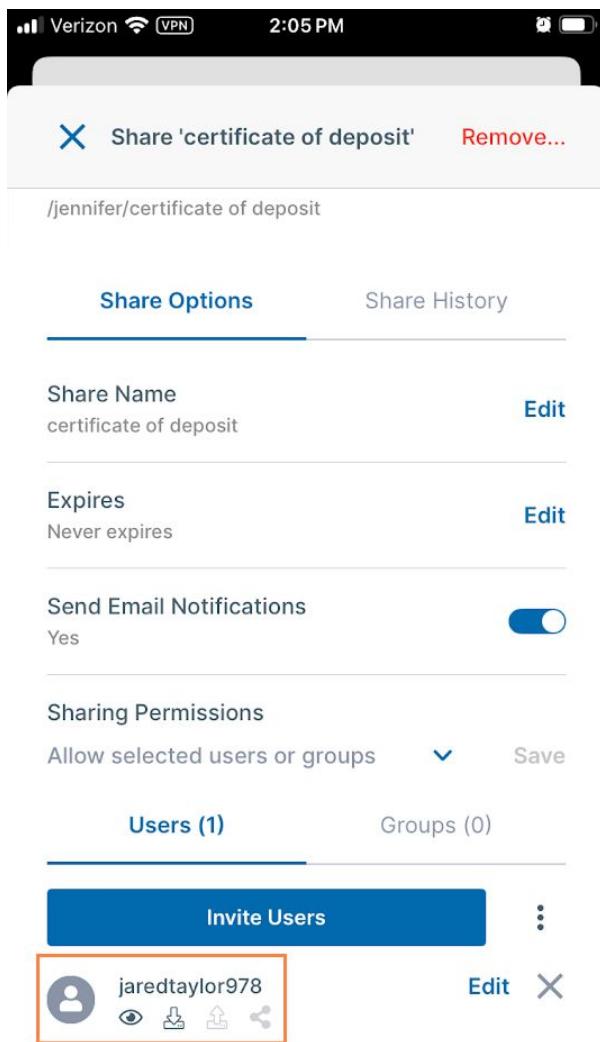

1. Tap **Invite users**.

2. In the **Invite users to this share** popup, enter a user's email address or account name, and tap the name to add it.
If the user you enter does not have an account, a message informs you that a new account will be created and a message will be sent informing the user.
3. Enter any number of users. When you are done, tap **Add Users**.

The user is added to the share.

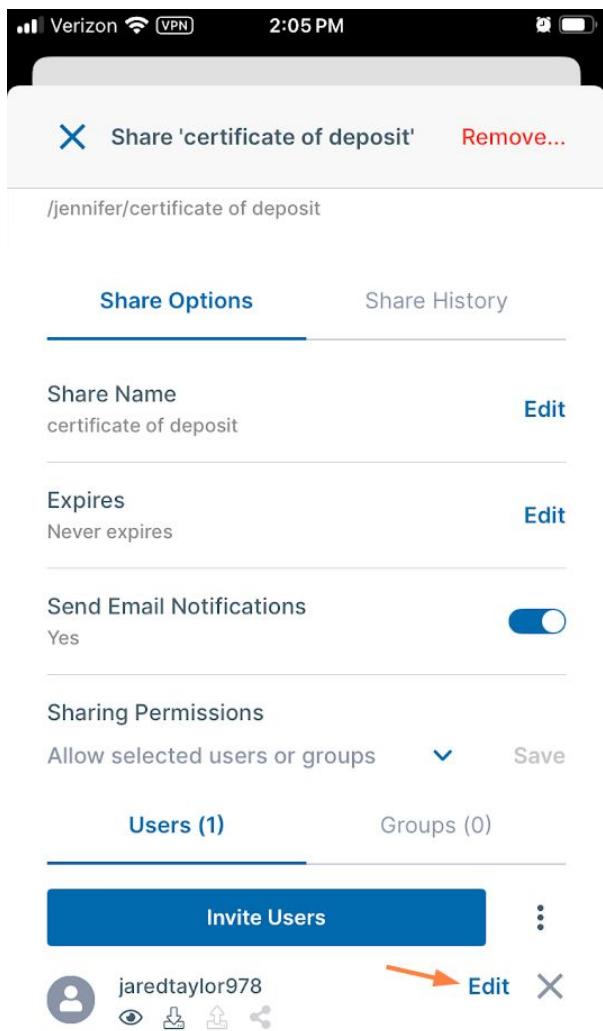

To change a user's private share permissions:

When you privately share a file with a user, the user's permissions for the file are shown in icons below the username or email. By default, the user has view and download permissions for the file. You can also give the user upload and share permissions, and if it is allowed in your system, sync permission. Note that other settings in FileCloud affect which permissions are available.

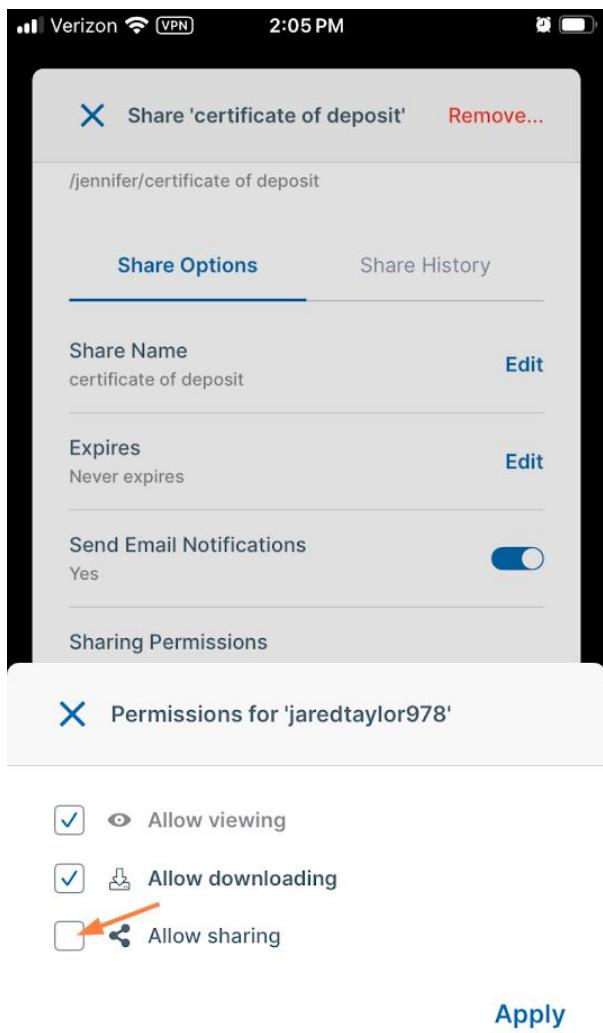

To change the user's permissions for the file:

1. Across from the user's name or email, tap **Edit**.

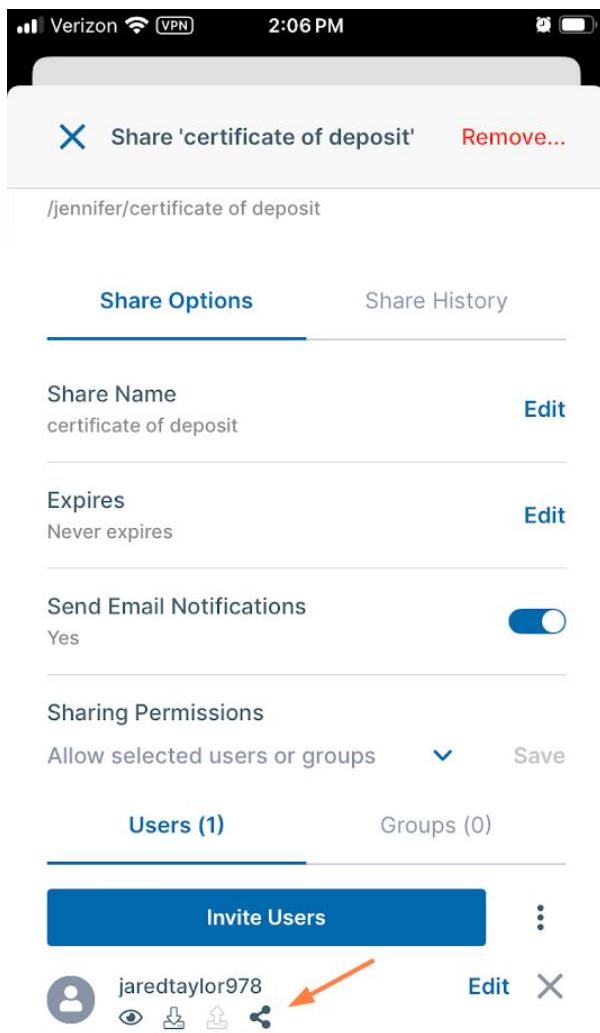

A popup shows the available permissions.

2. Check or uncheck permissions, and tap **Apply**.

The changes to the permissions are saved.

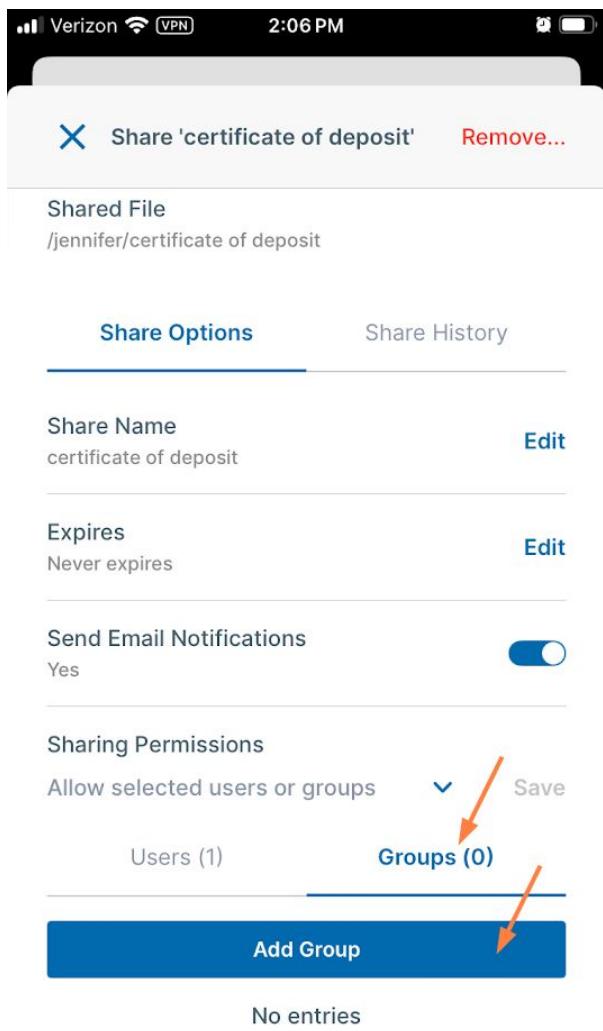

To add groups to a private share:

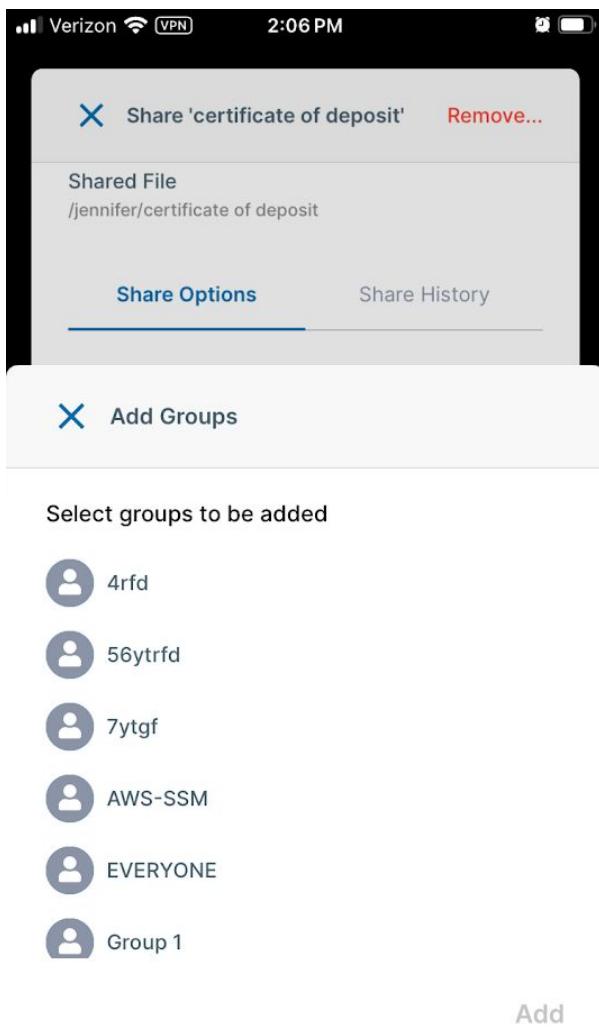

After you choose **Allow selected users or groups**, **Users** and **Groups** tabs appear.

To add a group to a private share:

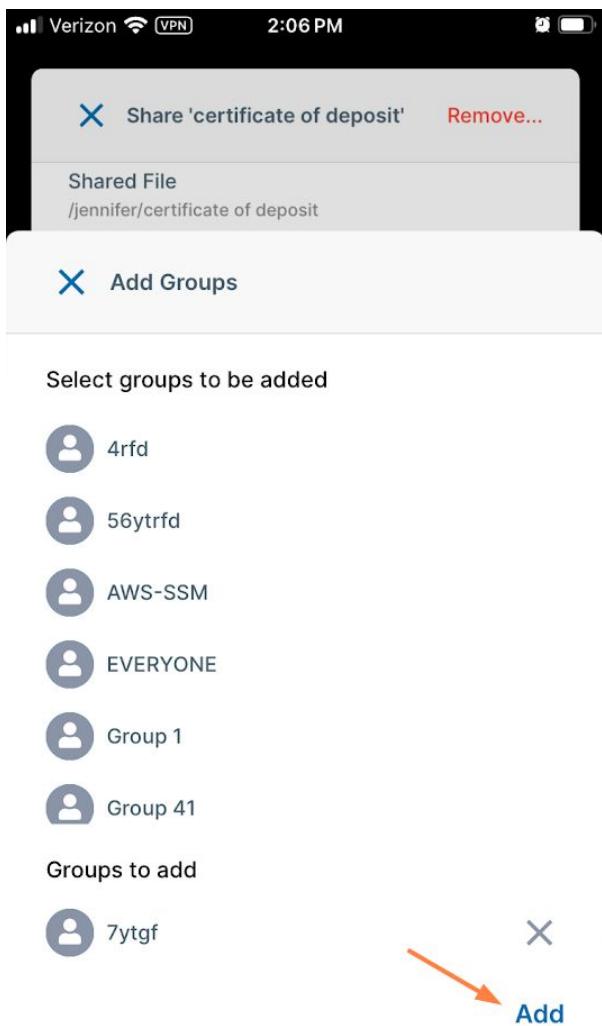

1. Tap the **Groups** tab and then tap **Add Group**.

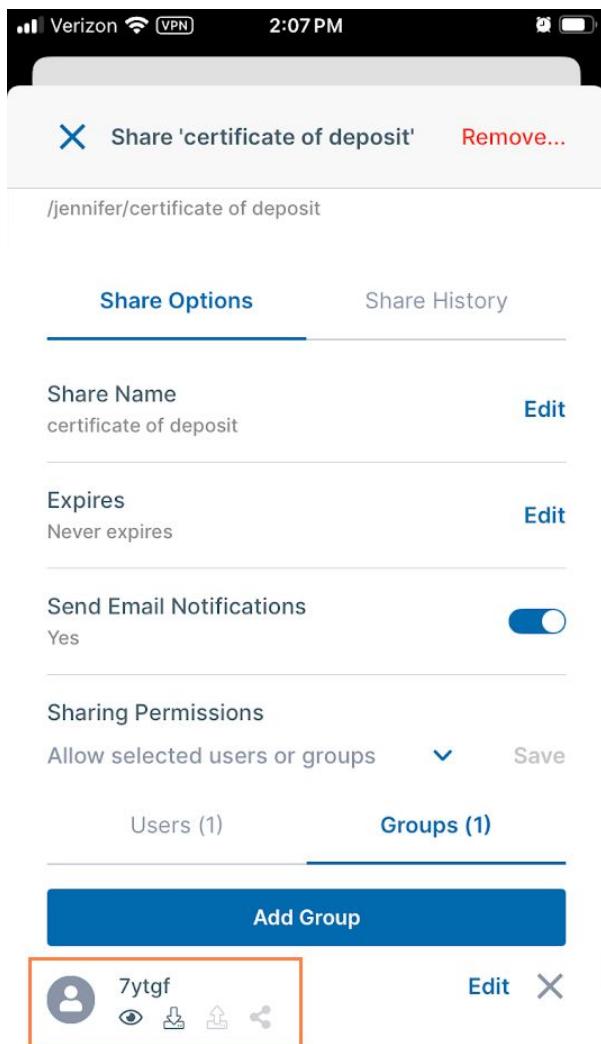

2. Tap each group that you want to add to the share.

3. When you are done selecting groups, tap **Add**.

The group or groups are added to the share:

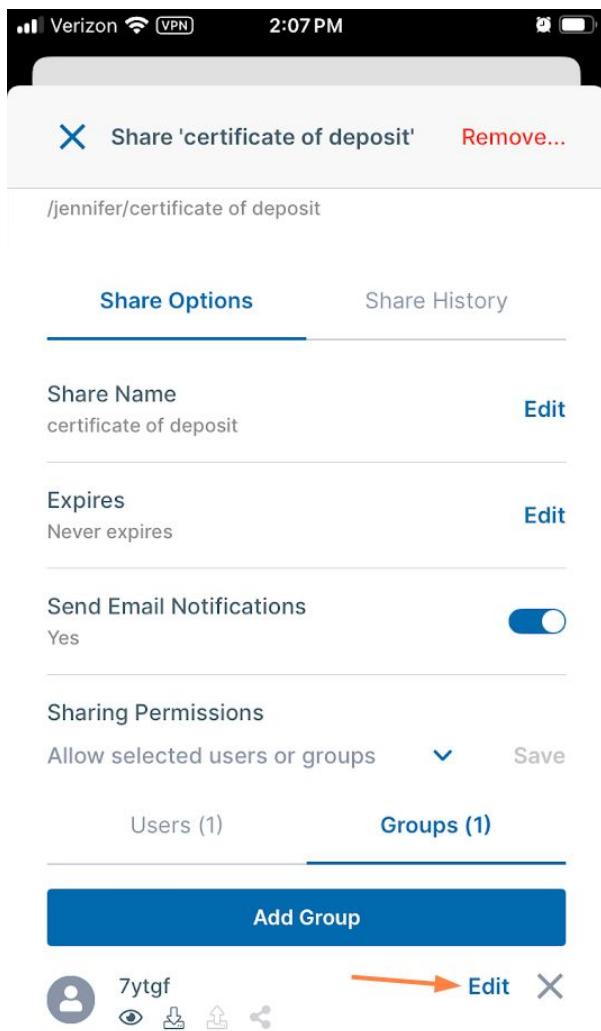

To change a group's private share permissions:

When you privately share a file with a group, the group's permissions for the file are shown in icons below the group name. By default, the members of the group have view and download permissions for the file.

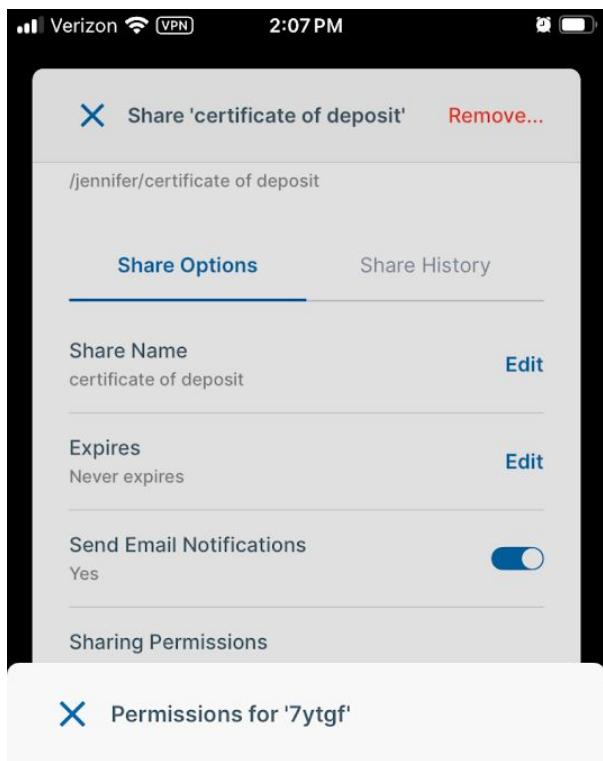

You can also give the group upload and share permissions, and if it is allowed in your system, sync permission. Note that other settings in FileCloud affect which permissions are available.

To change the group's permissions for the file:

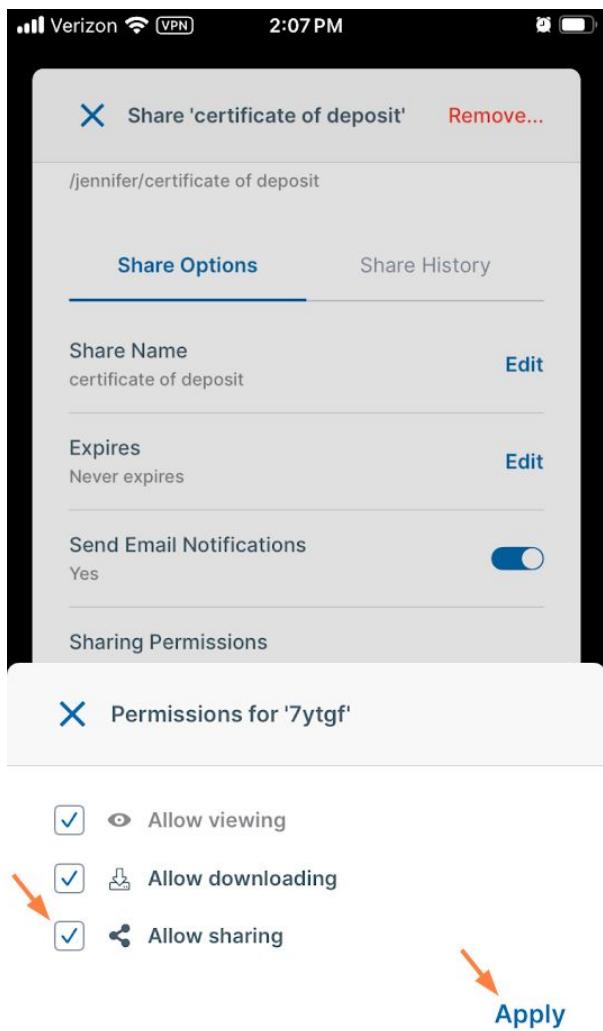

1. Across from the group, tap **Edit**.

2. A popup shows the available permissions.

3. Check or uncheck permissions, and tap **Apply**.

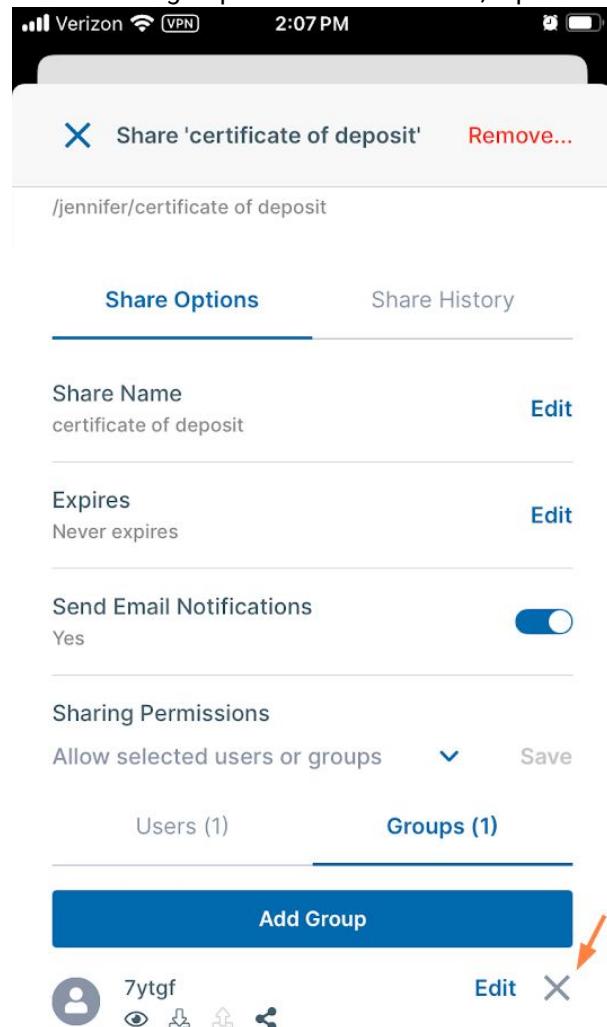

The changes to the permissions are saved.

The screenshot shows a mobile application interface for managing document sharing. At the top, a navigation bar displays the text 'FileCloud Online 23.253 FileCloud Mobile Access'. Below this, a header bar for a specific document ('certificate of deposit') includes a 'Share' icon, the document name, and a 'Remove...' button. The main content area is titled 'Share Options' and contains the following settings:

- Share Name:** certificate of deposit (with an 'Edit' button)
- Expires:** Never expires (with an 'Edit' button)
- Send Email Notifications:** Yes (with a toggle switch)
- Sharing Permissions:** A dropdown menu set to 'Allow selected users or groups' with a 'Save' button.
- Users (1):** A list containing a single user entry: '7ytgf' (with a user icon, edit, and delete buttons).
- Groups (1):** A list containing a single group entry: '7ytgf' (with a group icon, edit, and delete buttons).
- Add Group:** A blue button for adding new groups.

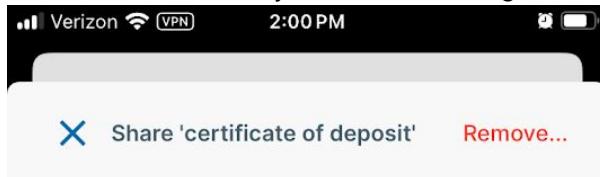

To remove a user or group from a share:

To remove a group or user from a share, tap the x next to it:

To make a share public:

1. Click the arrow beside your current **Sharing Permissions** choice.

Sharing Permissions

To copy the share link:

To copy the folder share link:

1. Tap the Copy icon.

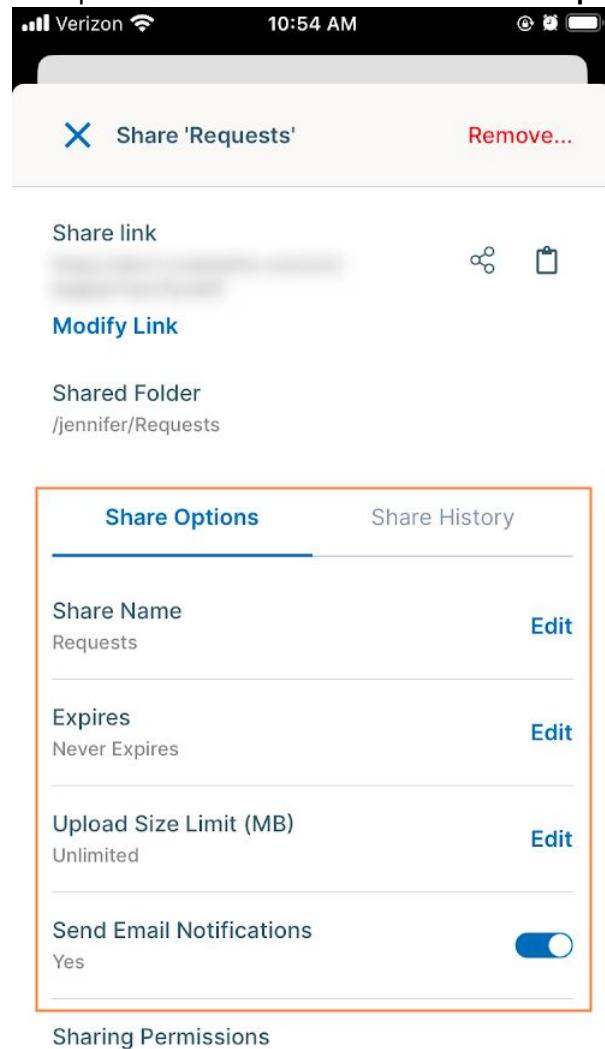

The screen displays the message **Share link copied**.

2. Paste the link into an email or text message and send it.

To change folder share options:

The options for a share are listed under **Share Options**:

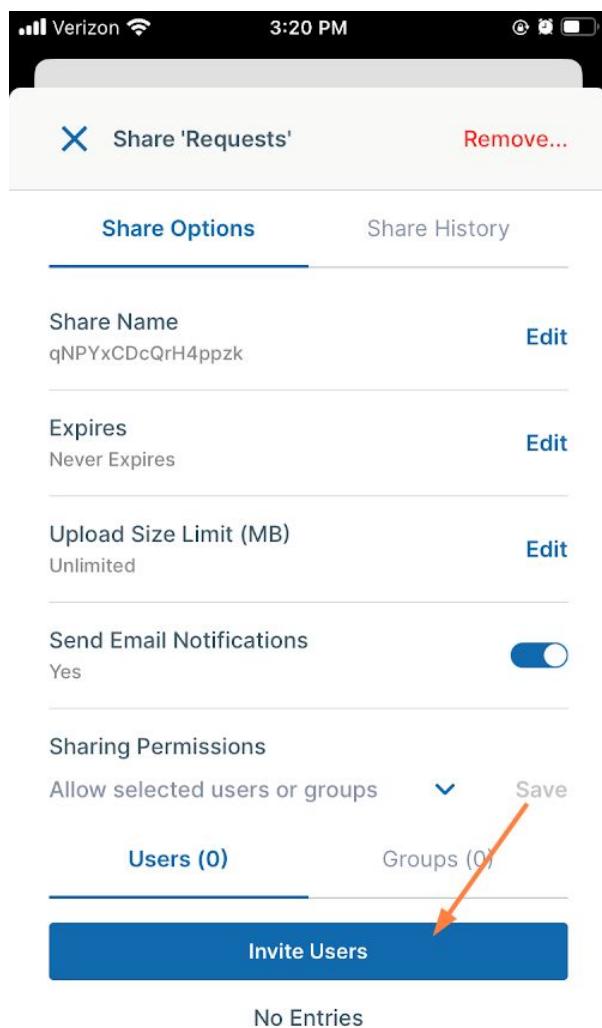

For information on setting share options, see:
Share Options for Public and Private Folders

To add users to a private share:

If you can't see the **Users** and **Groups** tabs, scroll to the bottom of the screen.

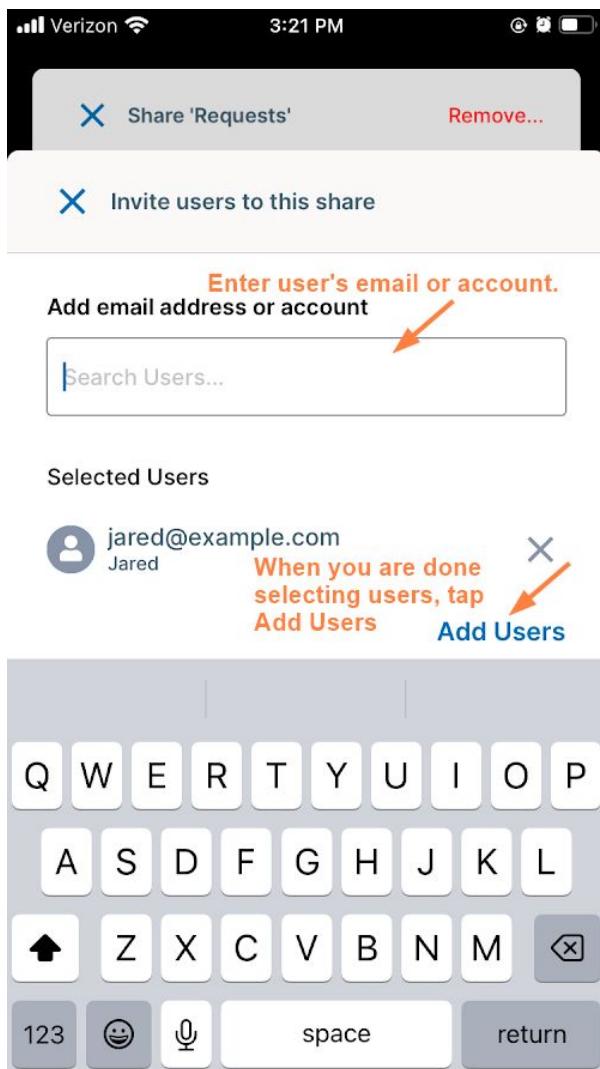

To add a user to a private share:

1. Tap **Invite users**.

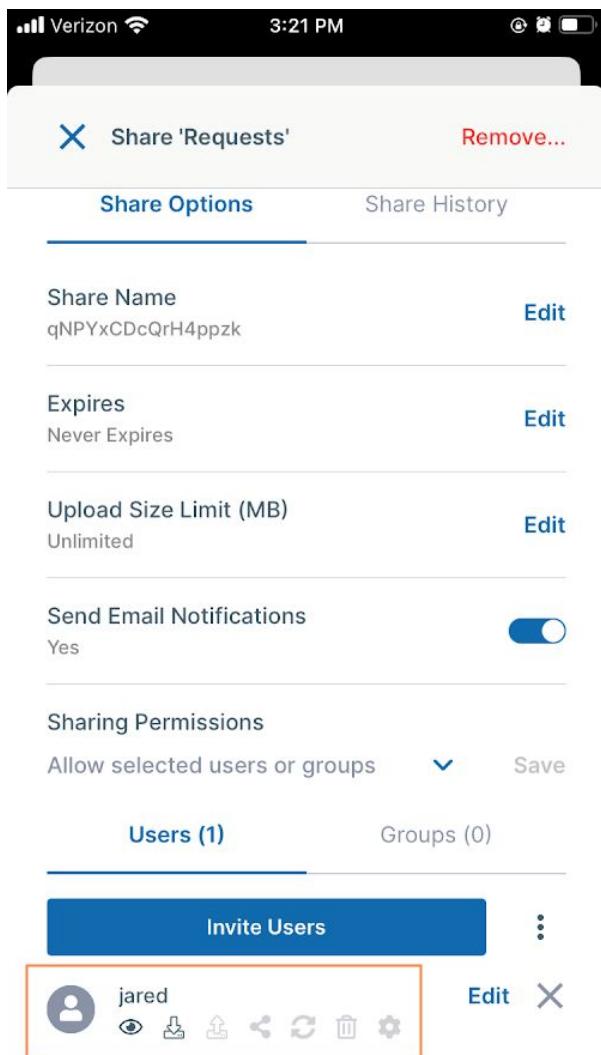

2. Enter a username or email that exists in your system, or enter a new user's email, and tap **Add Users**.

If you enter a new user, FileCloud sends them an email with the share link and asks them to create a FileCloud account to access the link.

The user is added to the share.

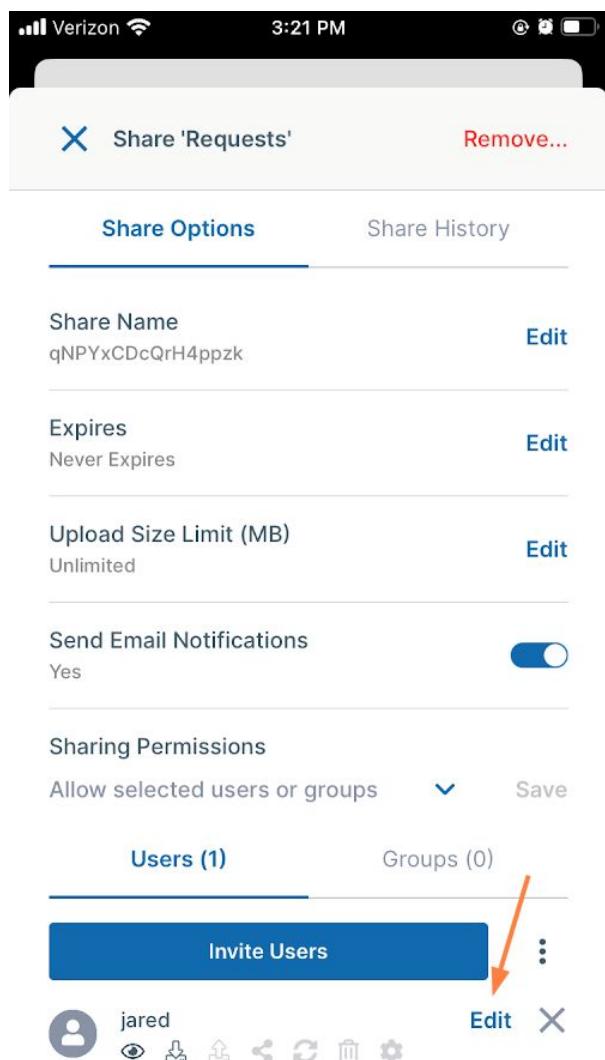

To change a user's private share permissions:

When you privately share a folder with a user, the user's permissions for the folder are shown in icons below the username or email. By default, the user has view and download permissions for the folder. You can also give the user upload and share permissions, and if they are allowed in your system, sync and delete permissions. Note that other settings in FileCloud affect which permissions are available.

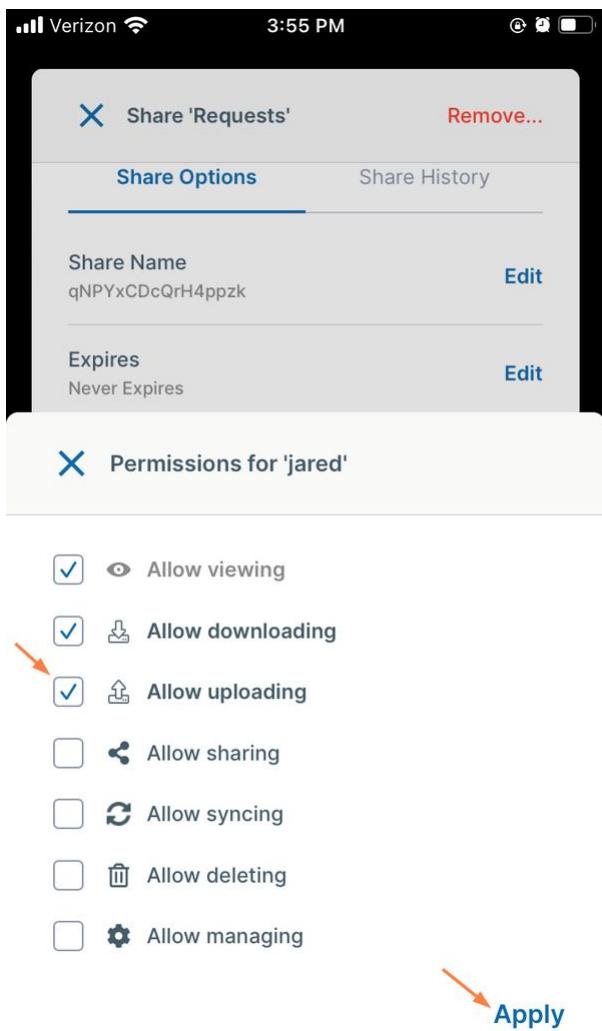

To change the user's permissions for the folder:

1. Across from the user's name or email, tap **Edit**.

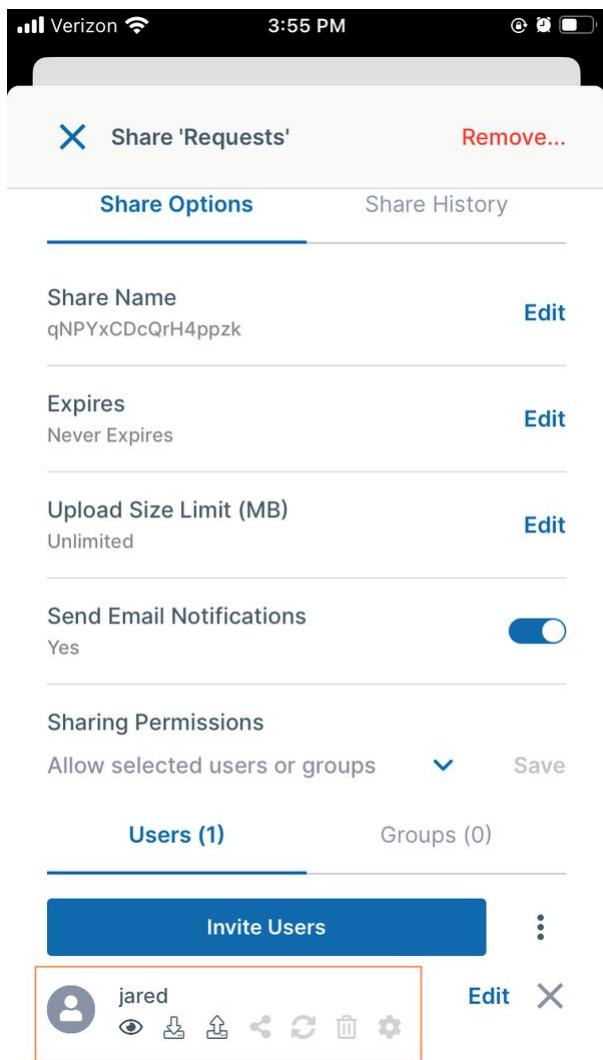

A popup shows the available permissions.

2. Check or uncheck permissions, and tap **Apply**.

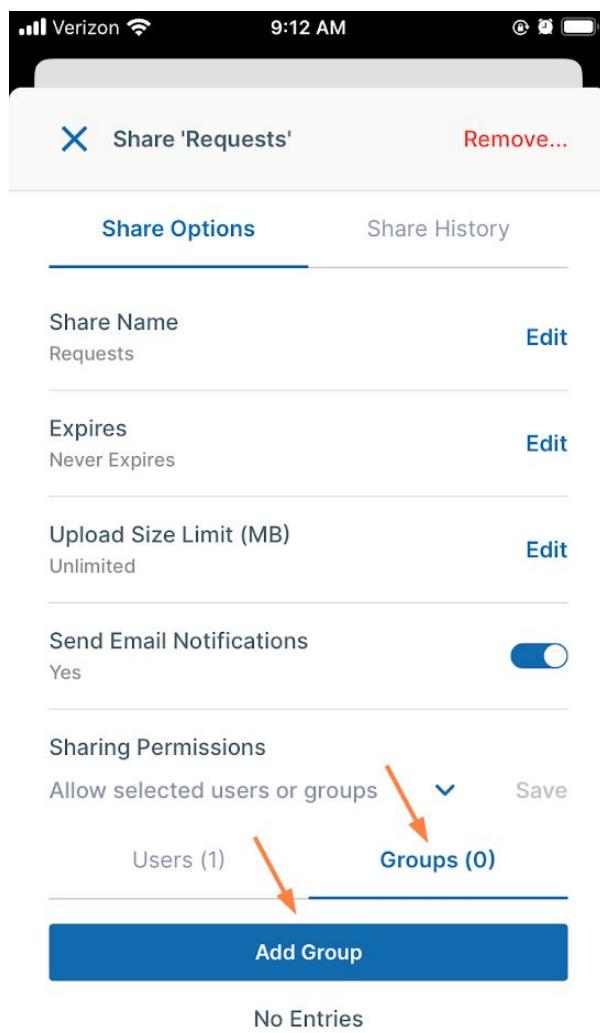

The changes to the permissions are saved.

To add groups to a private share:

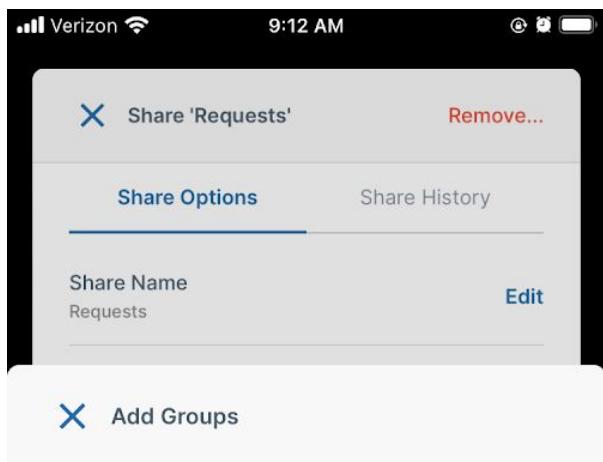

To add a group to a private share:

1. Tap the **Groups** tab, and then tap **Add Group**.

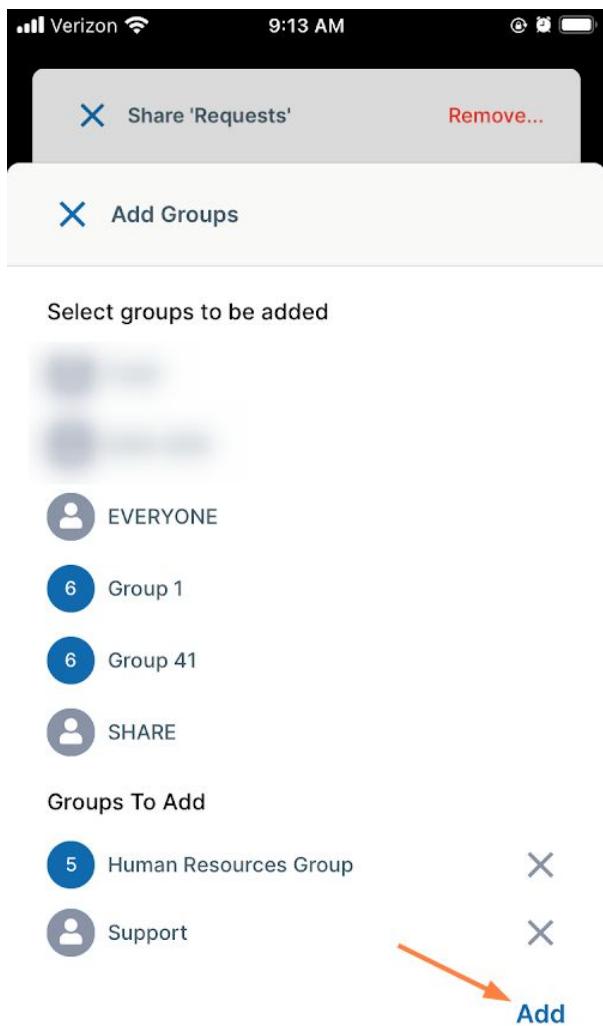

The groups that are available for you to add to the share appear.

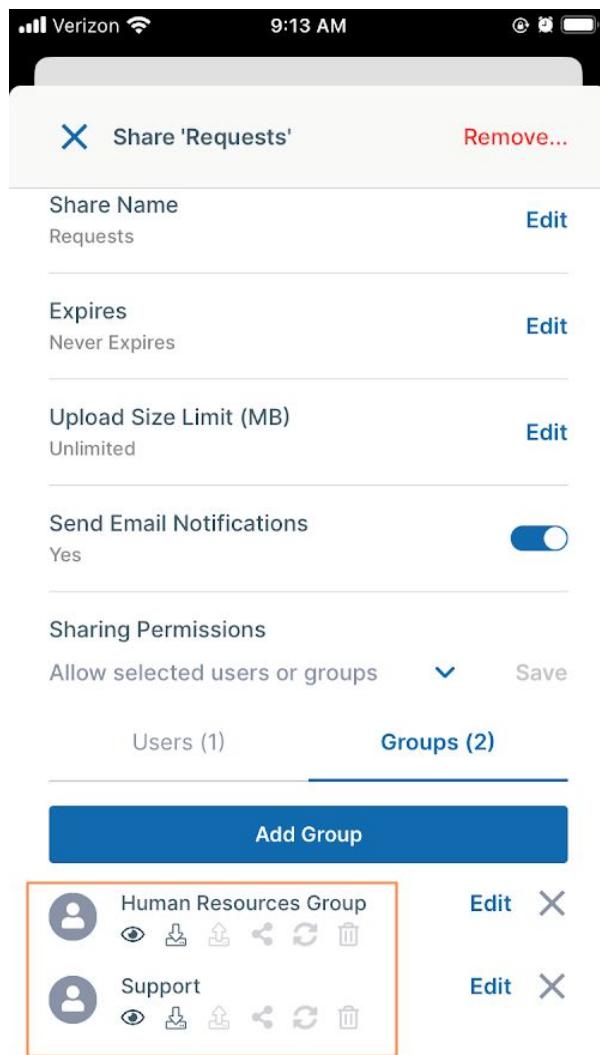

2. Tap each group that you want to add to the share.

3. When you are done selecting groups, tap **Add**.

The groups are added to the share:

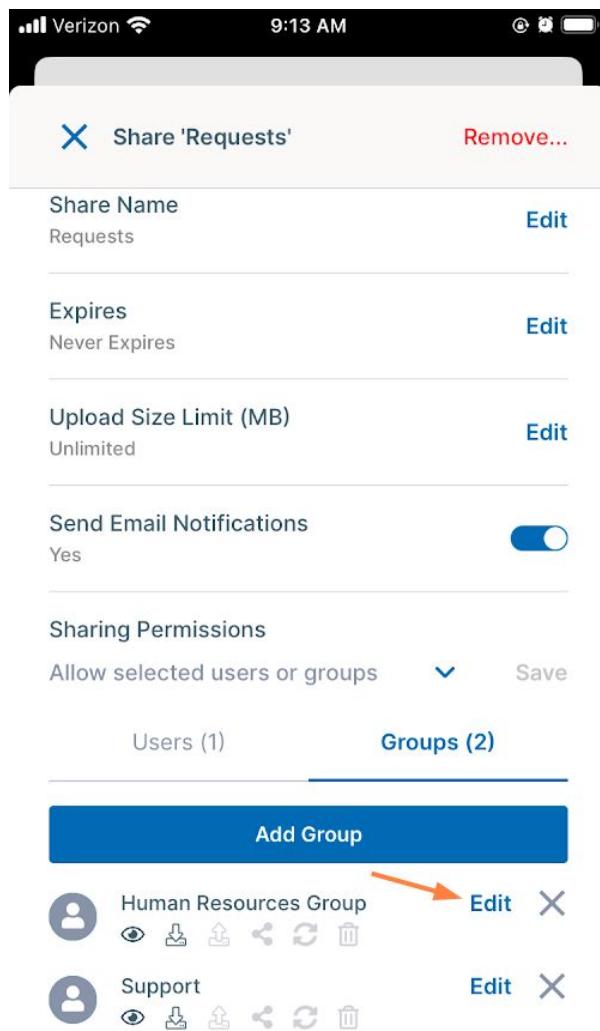

To change a group's private share permissions:

When you privately share a folder with a group, the group's permissions for the folder are shown in icons below the group name. By default, the members of the group have view and download permissions for the folder.

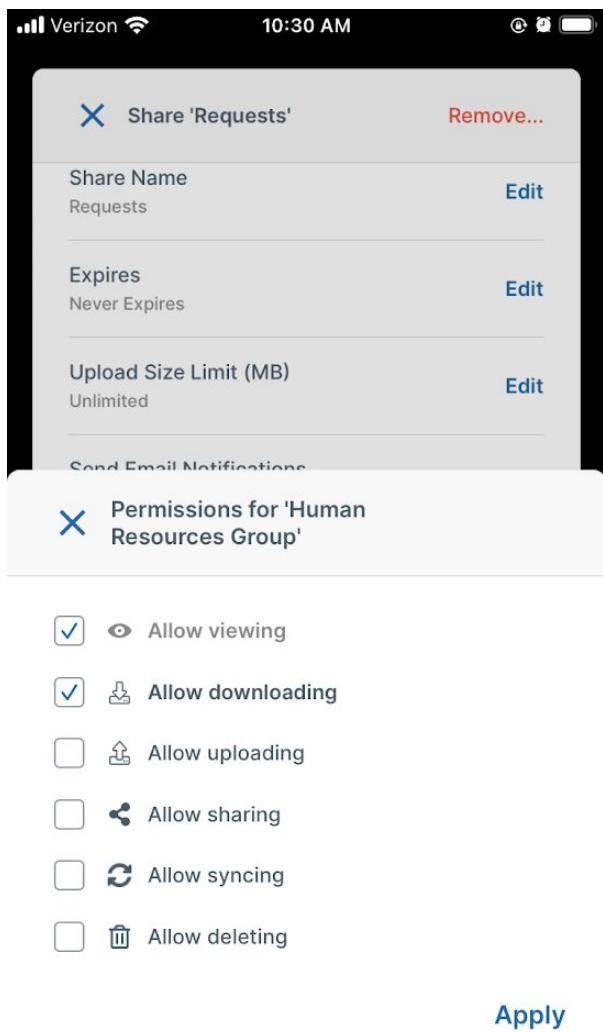

You can also give the group upload and share permission, and if it is allowed in your system, sync and delete permissions.

To change the group's permissions for the folder:

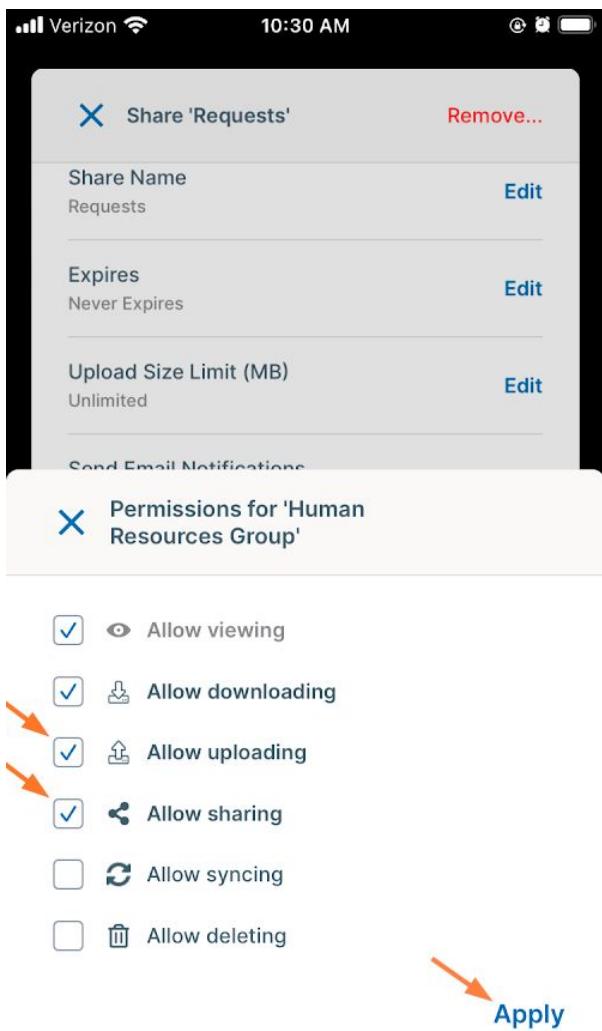

1. Across from the group, tap **Edit**.

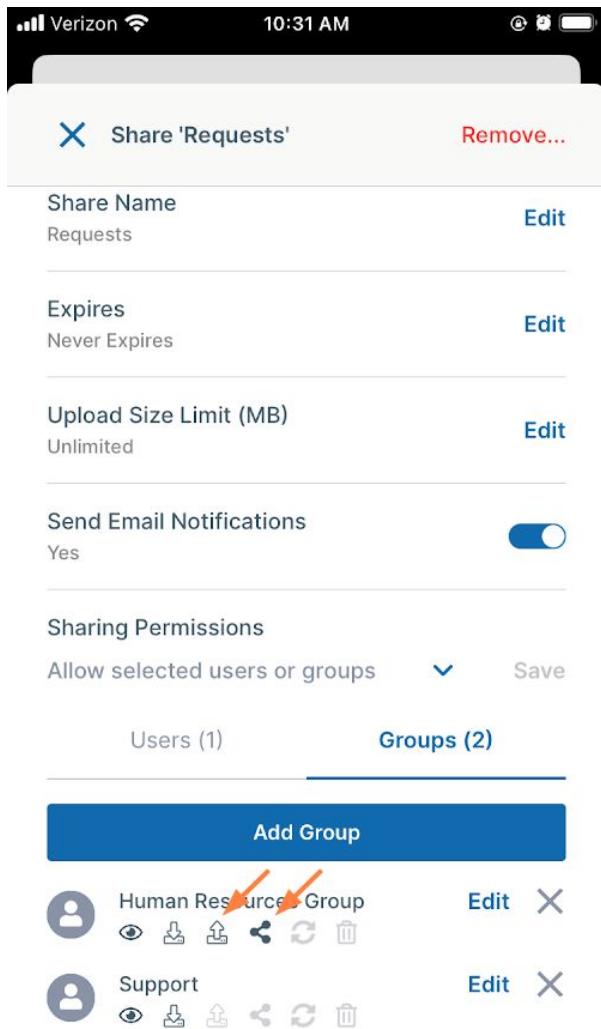

2. A popup shows the available permissions.

3. Check or uncheck permissions, and tap **Apply**.

The changes to the permissions are saved.

To remove a user or group from a share:

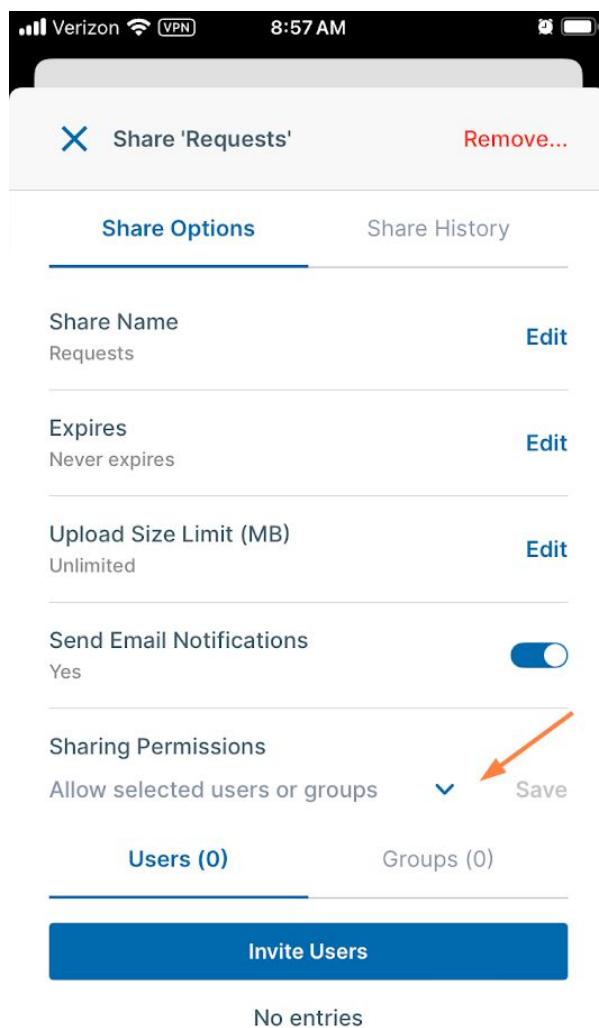

To remove a group or user from a share, tap the x next to it:

To make a share public:

To change a private folder share to public:

1. Click the arrow beside your current **Sharing Permissions** choice.

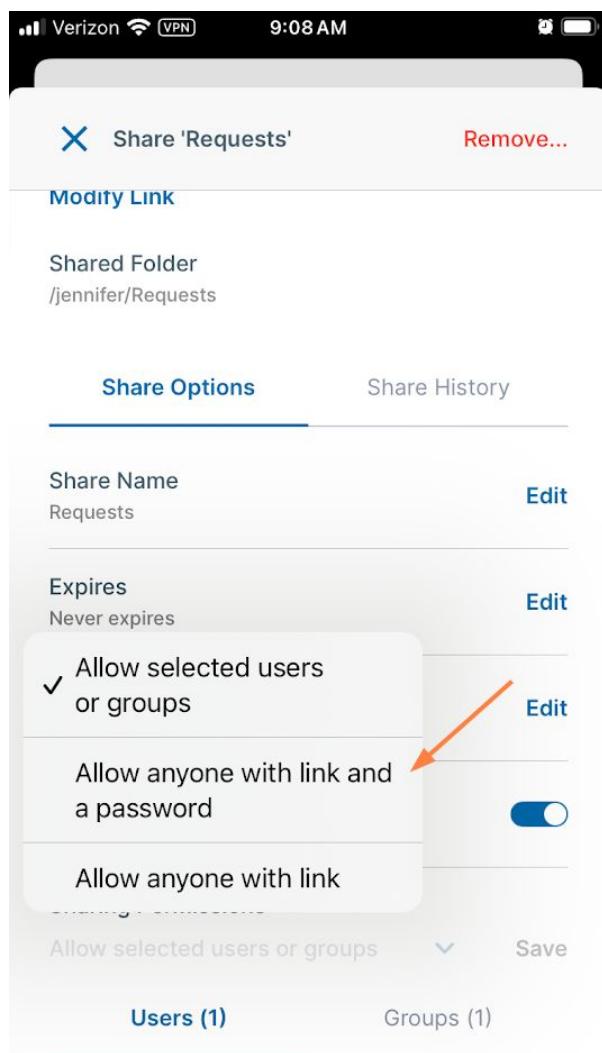

The options **Allow anyone with link**, **Allow anyone with link and a password**, and **Allow selected users or groups** appear.

2. Tap **Allow anyone with link and a password** to create a public share that requires a user to enter a password to access it.

or

2. Tap **Allow anyone with link** to create a public share that does not require a user to enter a password to access it.

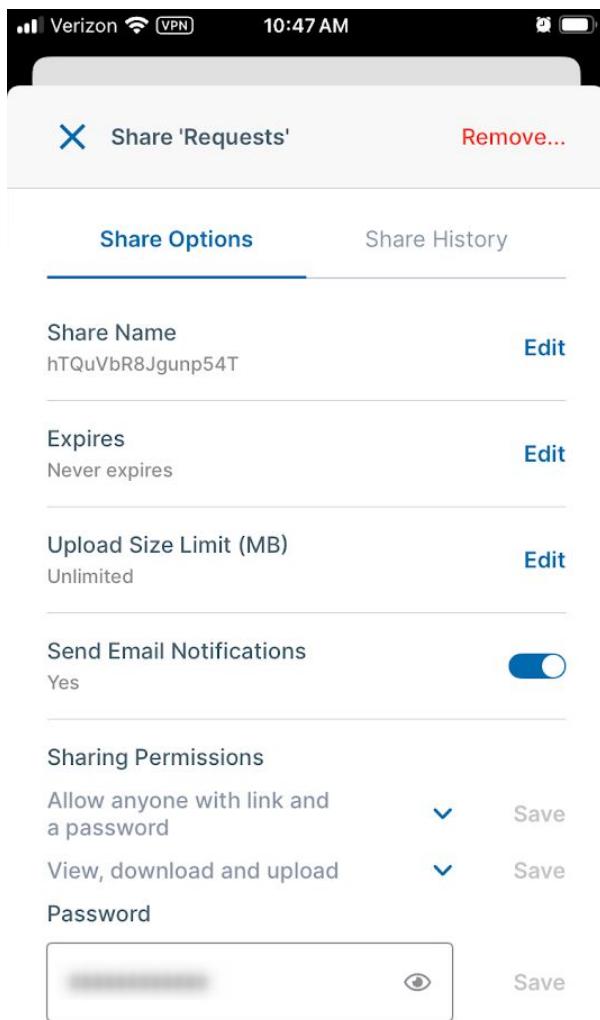

In this example, we choose **Allow anyone with link and a password**.

Allow anyone with link and a password now appears under **Sharing permissions**.

3. Tap **Save**, and then tap **OK**.

Since we chose **Allow anyone with link and a password**, a **Password** field that is filled with an auto-generated password appears. To view the password, click the eye icon. To change the password, type over it and click **Save**.

To change the permissions on a public share

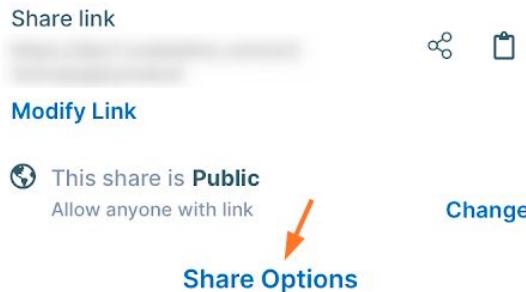

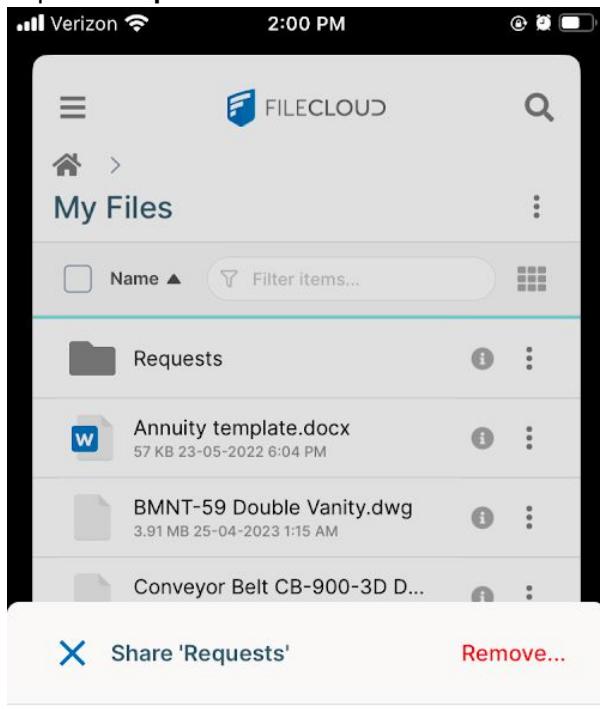

For public folder sharing, the following permissions are available. By default, the share has View + Download permission, but you may change it.

Permission	Effect
View + Download (default)	Users can browse existing files and download files to the folder.
View + Download + Upload	Users can browse existing files, download files and upload files to the folder.
View + Upload	Users can browse existing files, preview files (not download) and upload files to the folder.

Permission	Effect
View Only	Users can only browse existing files, and preview files in the folder (not download).
Upload Only	Users cannot browse existing files, but only upload files. It is like an upload-only FTP folder. It is also possible to create a web form to embed in other sites.

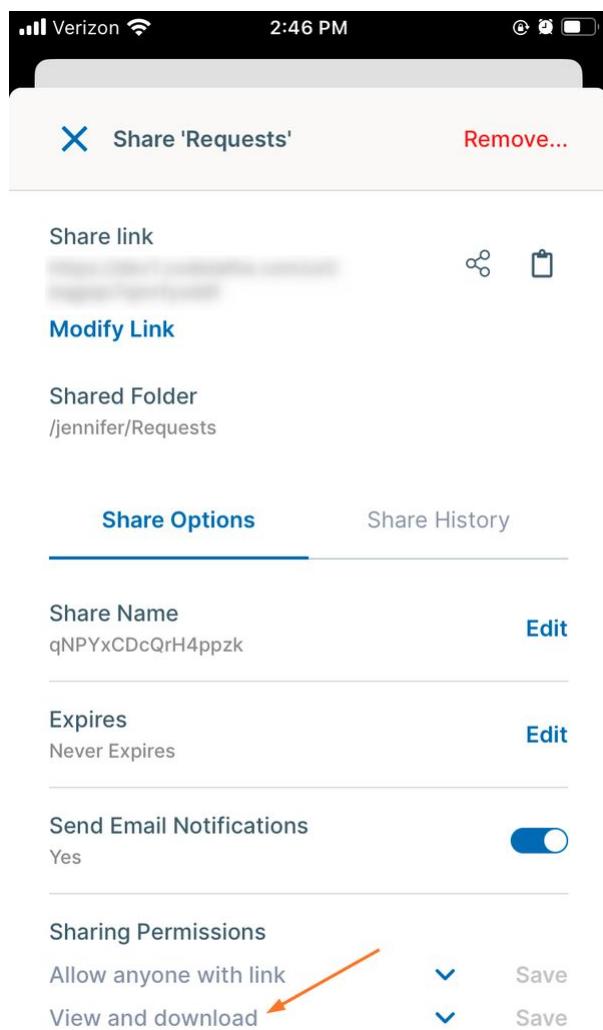

To change the share permission for a folder:

1. Tap **Share Options**.

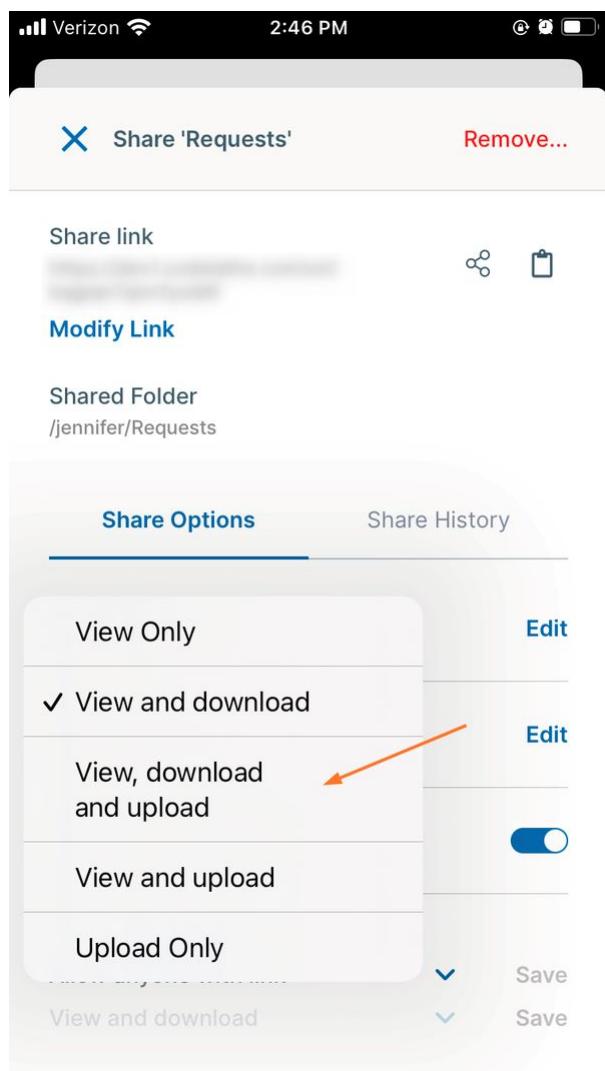

The share screen expands.

2. Under **Sharing Permissions**, tap the current permissions (such as View and Download).

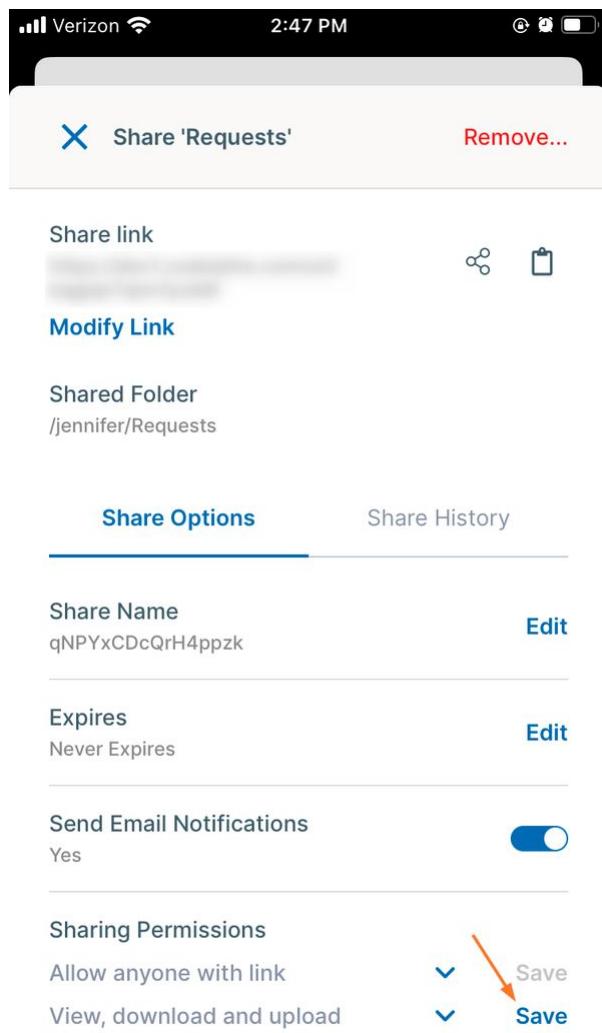

Permission options open.

3. Tap one of the permission options.

The permission appears changed.

4. Tap **Save** to save the changed permission.

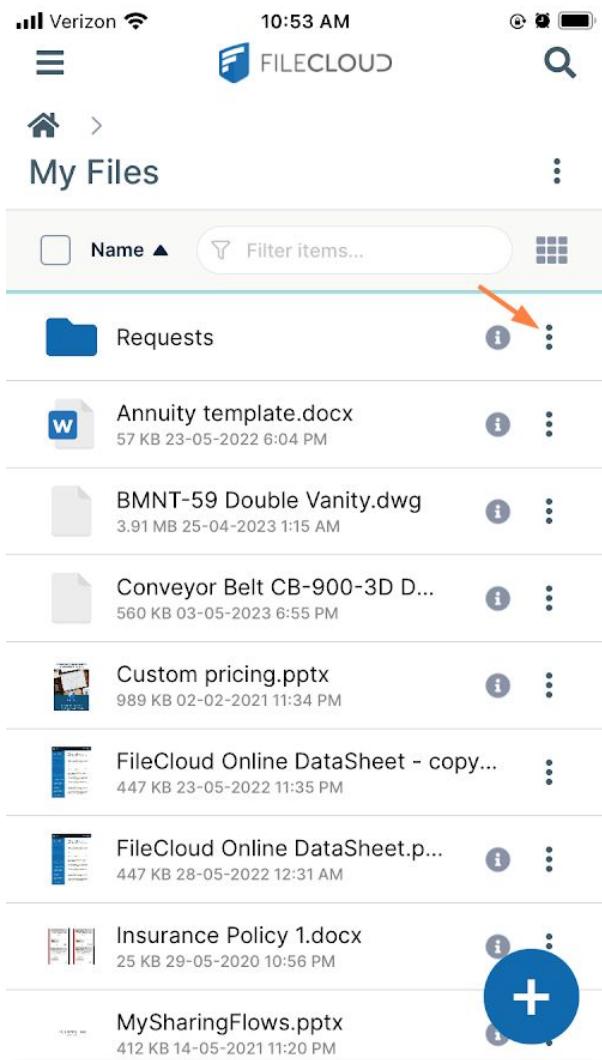

To remove a folder share:

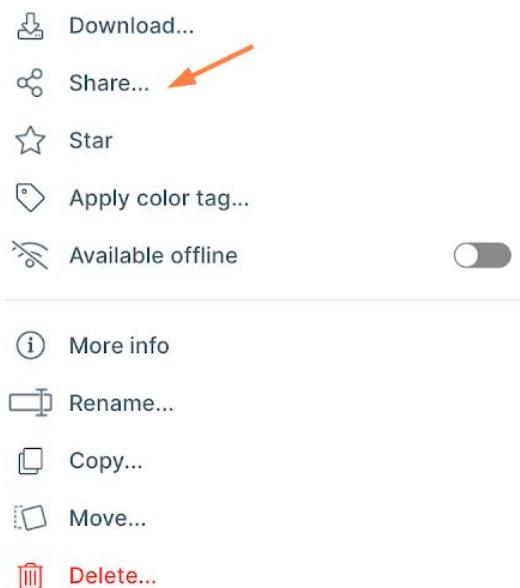

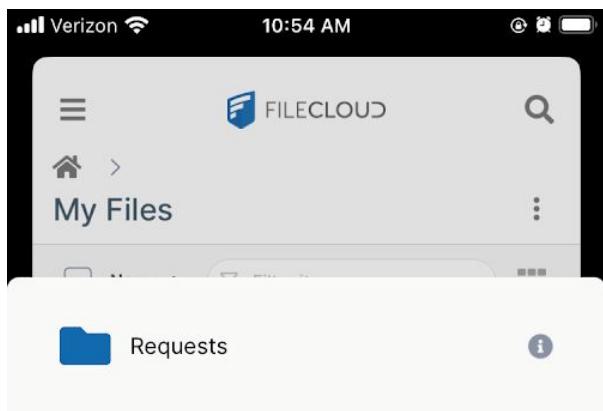

You can remove folder shares that you have created.

To remove a folder share:

1. Open the FileCloud app.
2. Navigate to the folder whose share you want to remove.
3. Tap the more icon next to the folder.

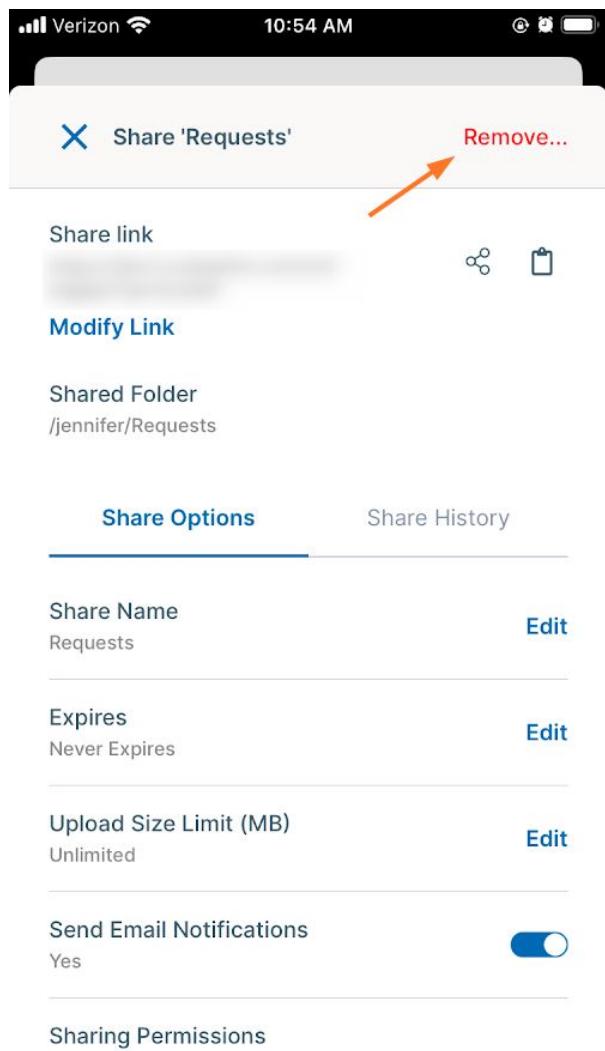

4. Tap **Share**.

The share details open.

5. Tap **Remove**.

The share is removed. Users who were given access to the share can no longer view it in their **Shared with me** folder or access it through the share link.

To share files on iOS, see [Share an iOS File \(see page 101\)](#).

For more detailed information about file and folder shares, see [Sharing Files and Folders⁴](#).

Delete, Move, Copy or Rename iOS data

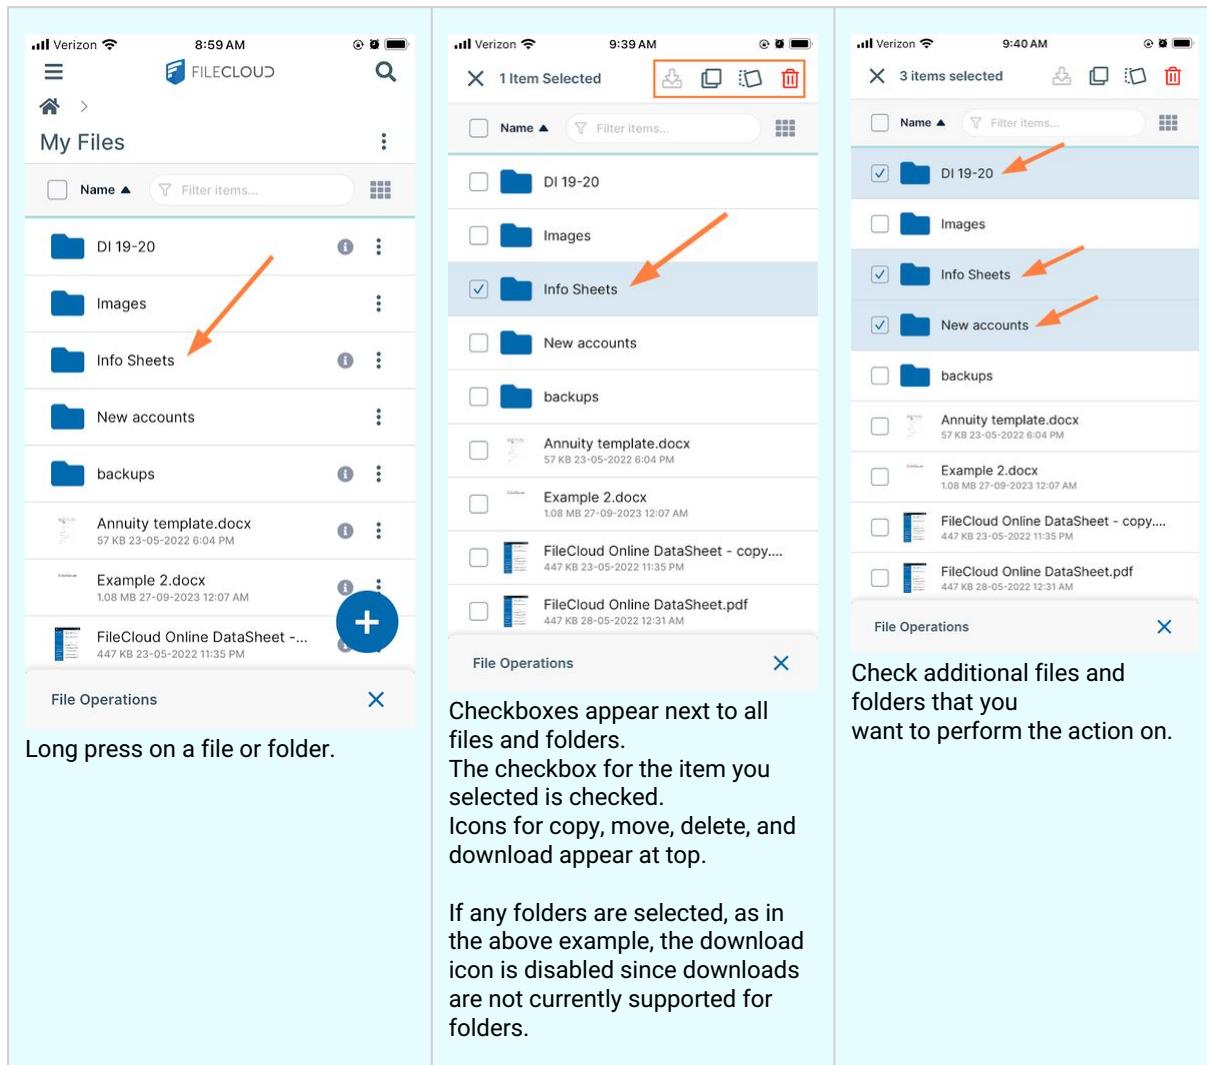

In the FileCloud iOS app, you can delete, move, copy, and rename your files and folders. You can perform the delete, move, and copy operations on a single file or folder or on multiple files and folders at the same time, but you can only rename one file or folder at a time.

4. <https://www.filecloud.com/supportdocs/display/FCDOC/Sharing+Files+and+Folders>

To access actions for multiple files and folders

To perform actions on multiple files and folders, check the checkboxes for the files and folders.

1. To select the files or folders, either:

My Files

- DI 19-20
- Images
- Info Sheets**
- New accounts
- backups
- Annuity template.docx
- Example 2.docx
- FileCloud Online DataSheet - ...

File Operations

Long press on a file or folder.

1 Item Selected

- DI 19-20
- Images
- Info Sheets**
- New accounts
- backups
- Annuity template.docx
- Example 2.docx
- FileCloud Online DataSheet - copy...
- FileCloud Online DataSheet.pdf

File Operations

Checkboxes appear next to all files and folders. The checkbox for the item you selected is checked. Icons for copy, move, delete, and download appear at top.

If any folders are selected, as in the above example, the download icon is disabled since downloads are not currently supported for folders.

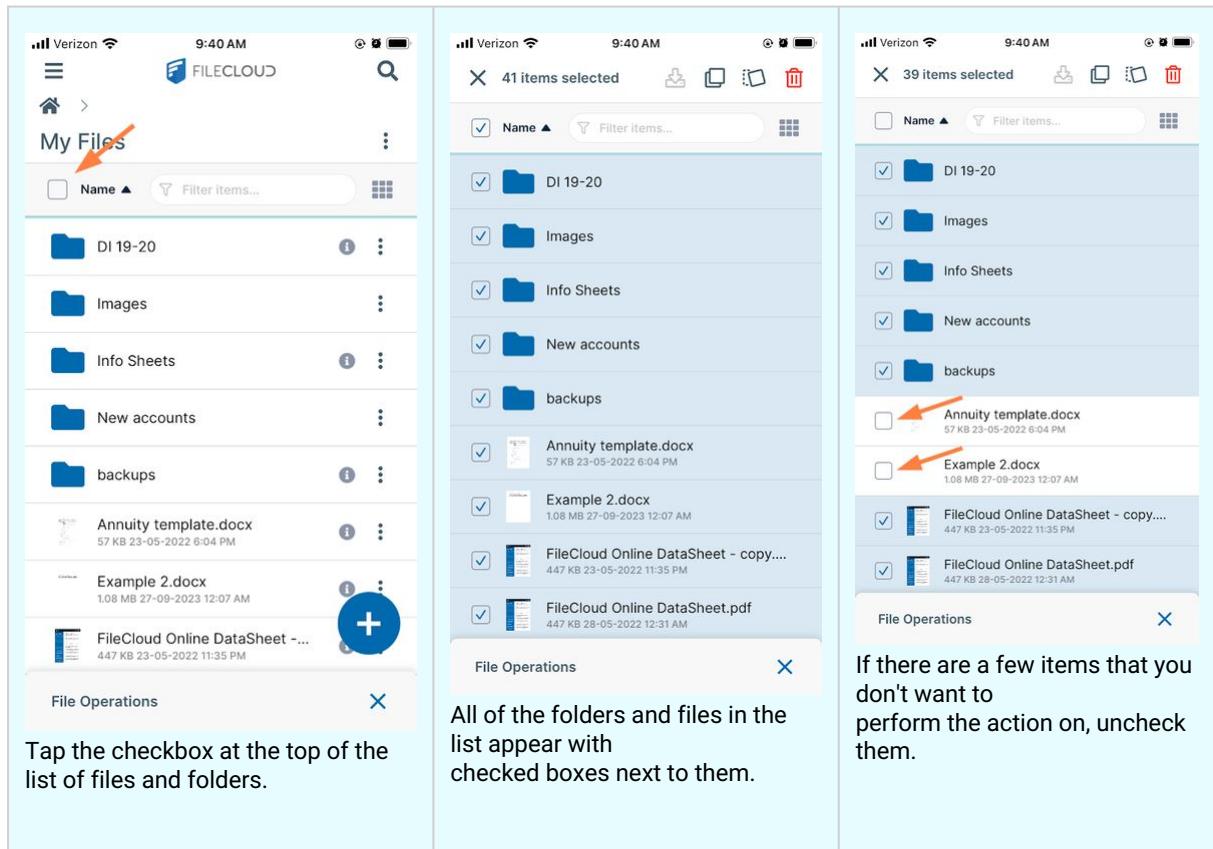

3 items selected

- DI 19-20**
- Images
- Info Sheets**
- New accounts**
- backups
- Annuity template.docx
- Example 2.docx
- FileCloud Online DataSheet - copy...
- FileCloud Online DataSheet.pdf

File Operations

Check additional files and folders that you want to perform the action on.

Or, if you want to act on many of the items in a folder:

The image consists of three side-by-side screenshots of the FileCloud mobile application interface on an iPhone or iPad. Each screenshot shows a list of files and folders with checkboxes next to them.

Screenshot 1 (Left): Shows the 'My Files' screen. A red arrow points to the checkbox at the top of the list. Below the list, there is a 'File Operations' section with a blue plus icon.

Screenshot 2 (Middle): Shows a list of 41 selected items. A red arrow points to the checkbox at the top of the list. The list includes various folder and file entries, such as 'DI 19-20', 'Images', 'Info Sheets', 'New accounts', 'backups', 'Annuity template.docx', 'Example 2.docx', and 'FileCloud Online DataSheet - ...'. A 'File Operations' section is at the bottom.

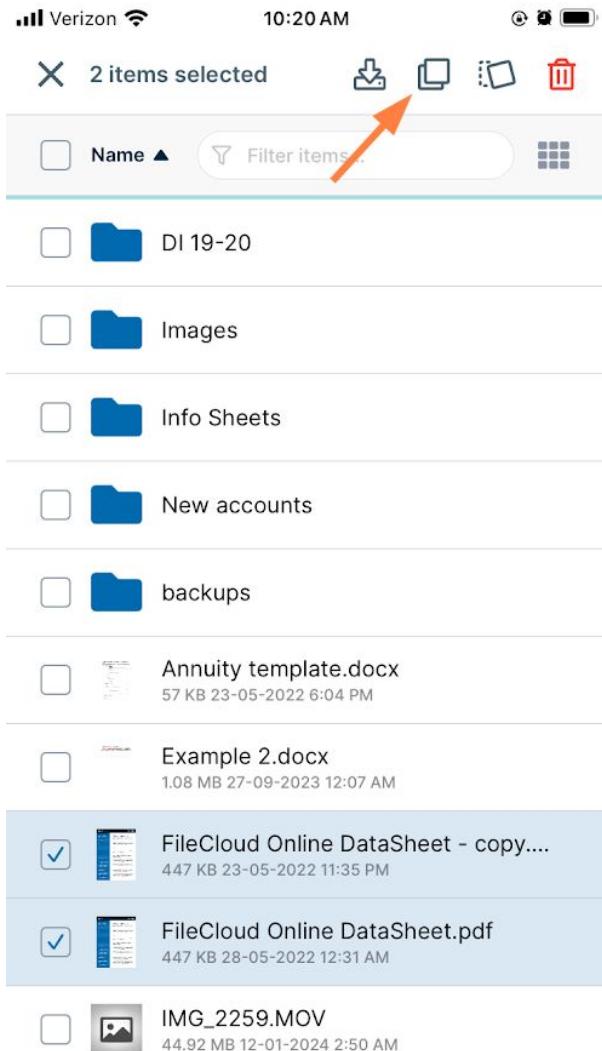

Screenshot 3 (Right): Shows a list of 39 selected items. A red arrow points to the checkbox at the top of the list. The list includes the same items as the middle screenshot. A 'File Operations' section is at the bottom.

Text Labels:

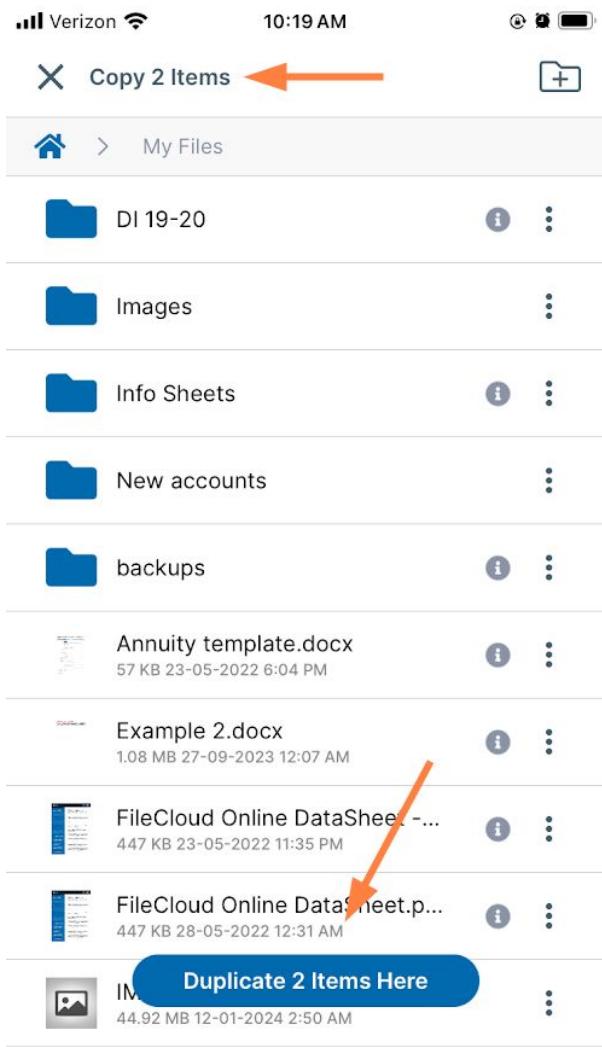

- Left Panel:** Tap the checkbox at the top of the list of files and folders.
- Middle Panel:** All of the folders and files in the list appear with checked boxes next to them.
- Right Panel:** If there are a few items that you don't want to perform the action on, uncheck them.

To copy multiple files and folders:

1. Select the files and folders and tap the **Copy** icon.

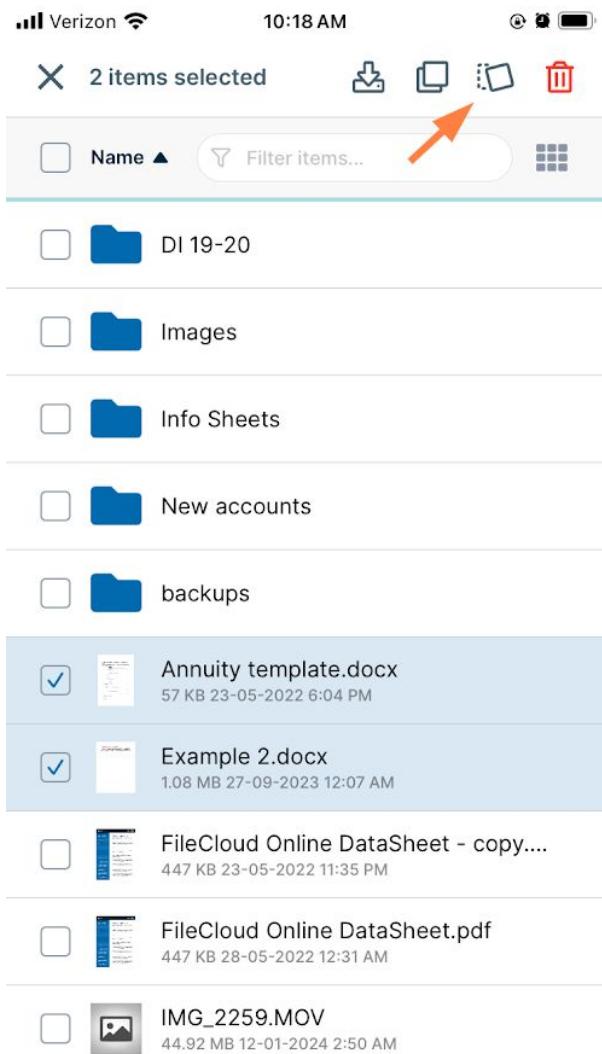

The **Copy** message at the top of the screen indicates how many items you are copying.
A **Duplicate here** message appears at the bottom of the screen.

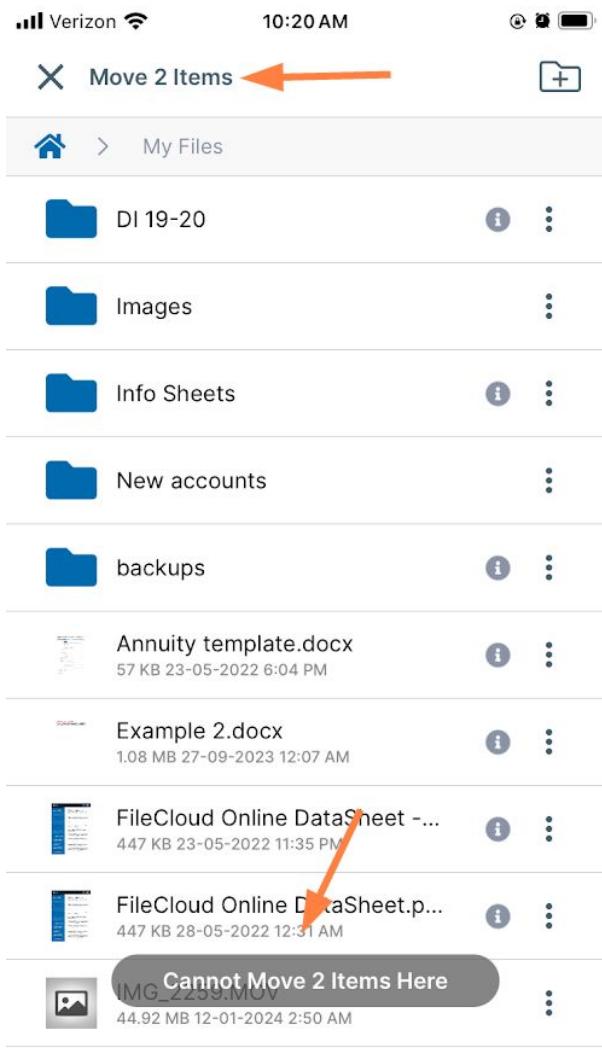

2. If you want to copy the items into the same location, tap the **Duplicate here** message.
OR
If you want to copy the items into another location, navigate to the location, and then tap the **Duplicate here** message.
Copies of the files and folders are added to the location.

To move multiple files and folders:

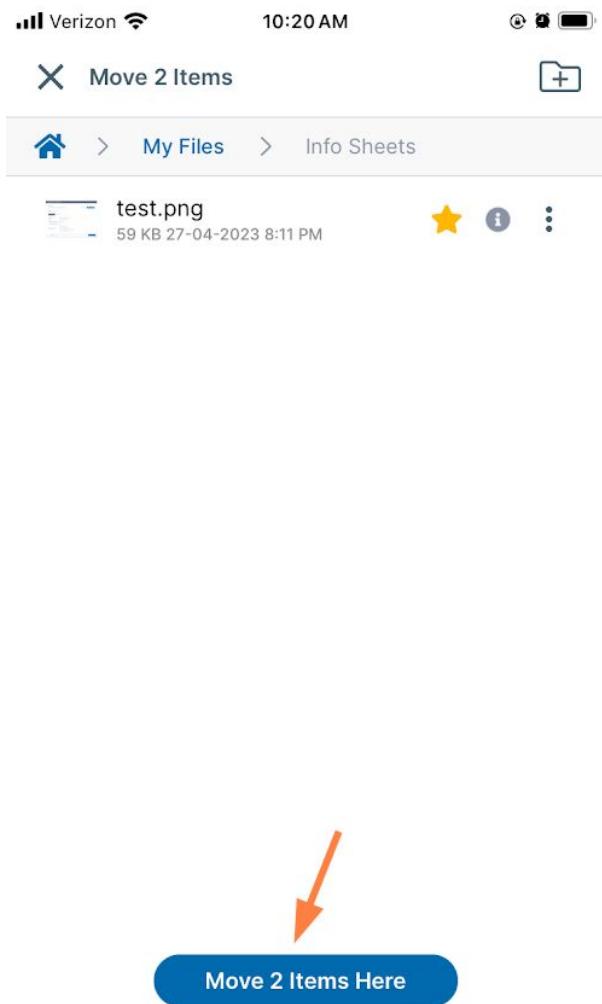

1. Select the files and folders, and tap the **Move** icon.

The Move message at the top of the screen indicates how many items you are moving. A **Cannot move here** message appears at the bottom of the screen because you are still in the same folder as the original items.

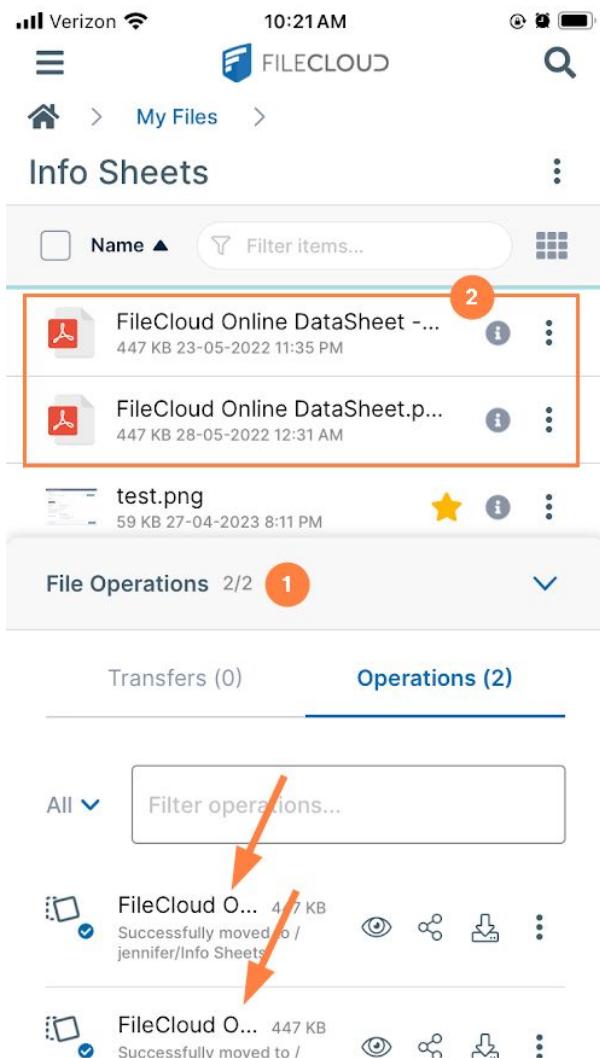

2. Navigate to the location where you want to move the items, and then tap the **Move items here** message.

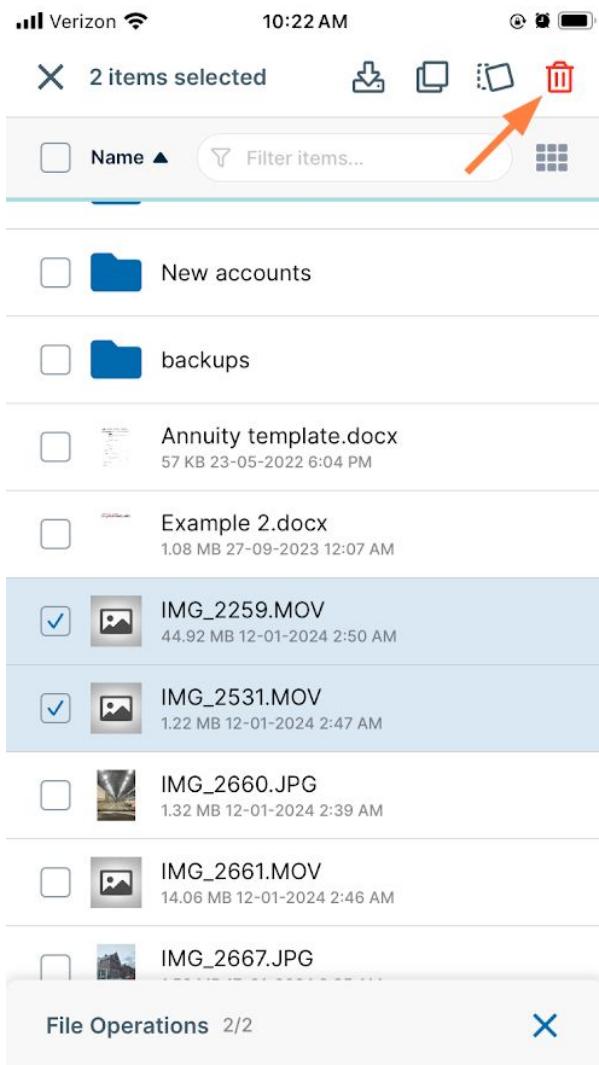

A File Operations popup shows you the progress of the move operation. Then the items appear in the new location.

Note: The popup and moved files may appear simultaneously if the files are moved quickly.

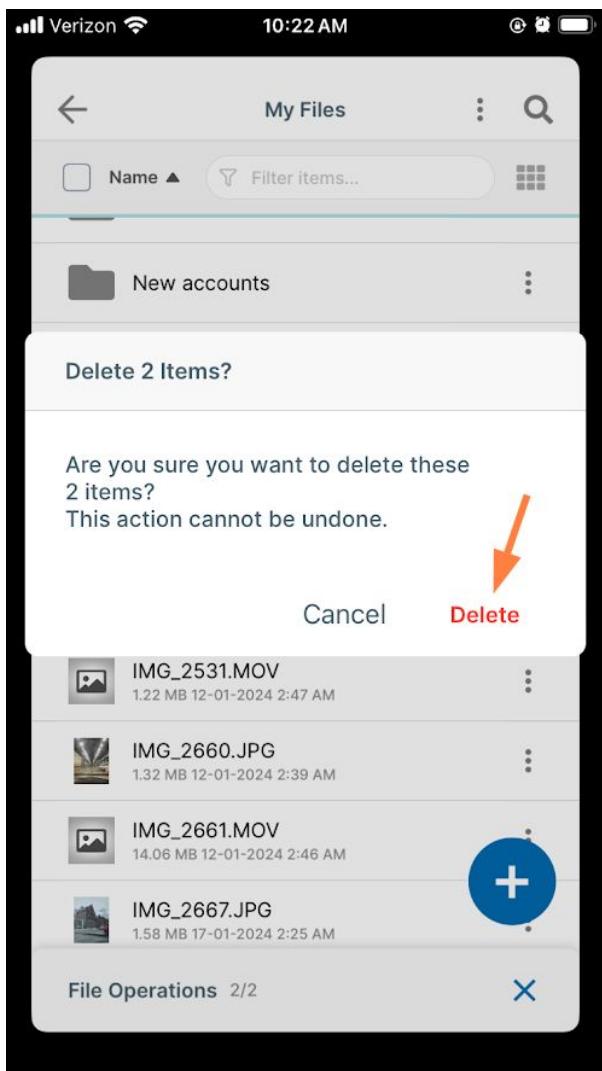

To delete multiple files or folders

1. Select the files and folders and tap the **Delete** icon.

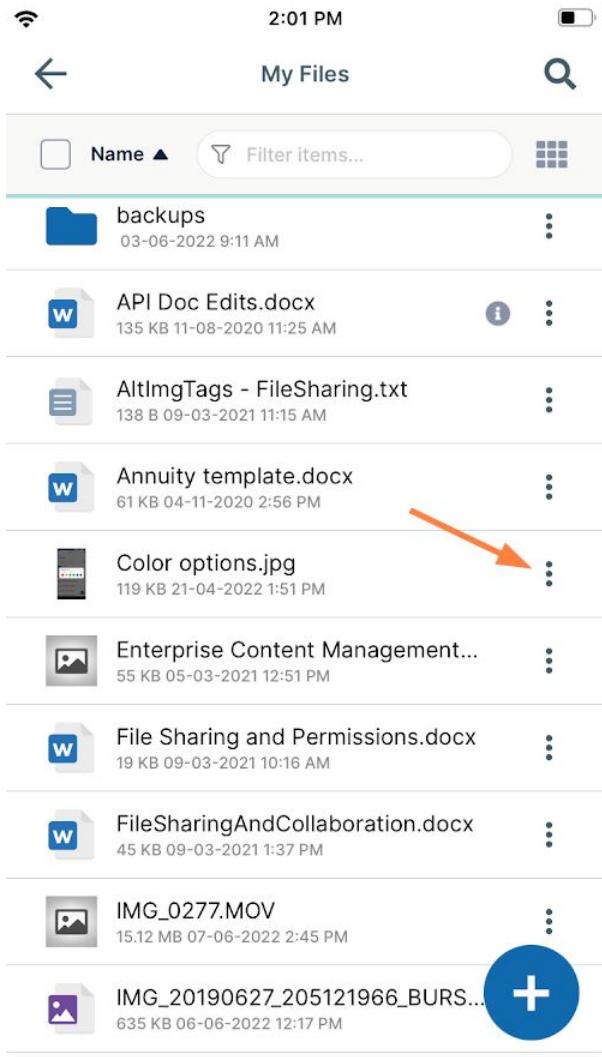

2. Tap **Delete** to confirm deletion.

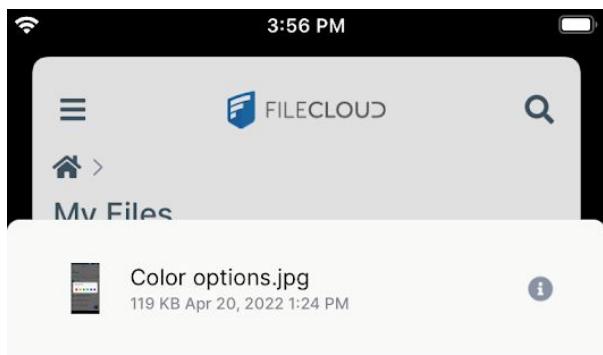

The files are deleted.

To access actions for a single file or folder by tapping the more icon

1. Tap the more (triple dot) icon to the right of the file or folder.

A list of file actions opens. **Rename**, **Copy**, **Move**, and **Delete** are listed at the bottom of the list.

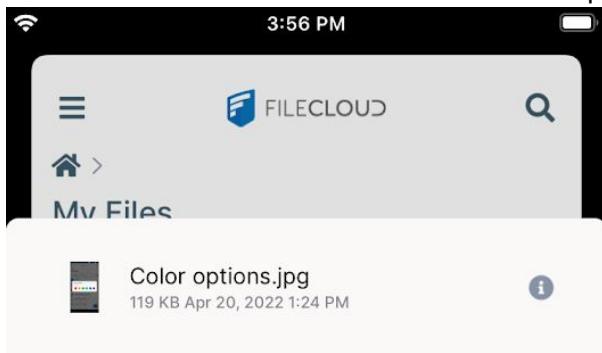

- Open with...
- Download
- Share...
- Star
- Apply color tag...
- Send for approval...

- More info

- Rename...
- Copy...
- Move...
- Delete...

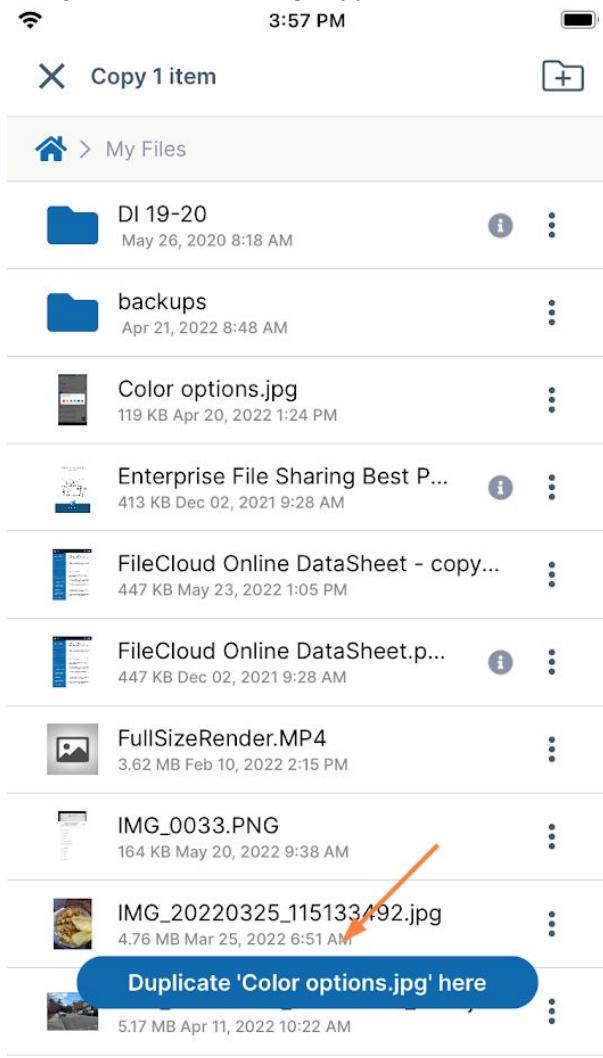

To copy a single file or folder:

1. Access the file actions for the file or folder and tap **Copy**.

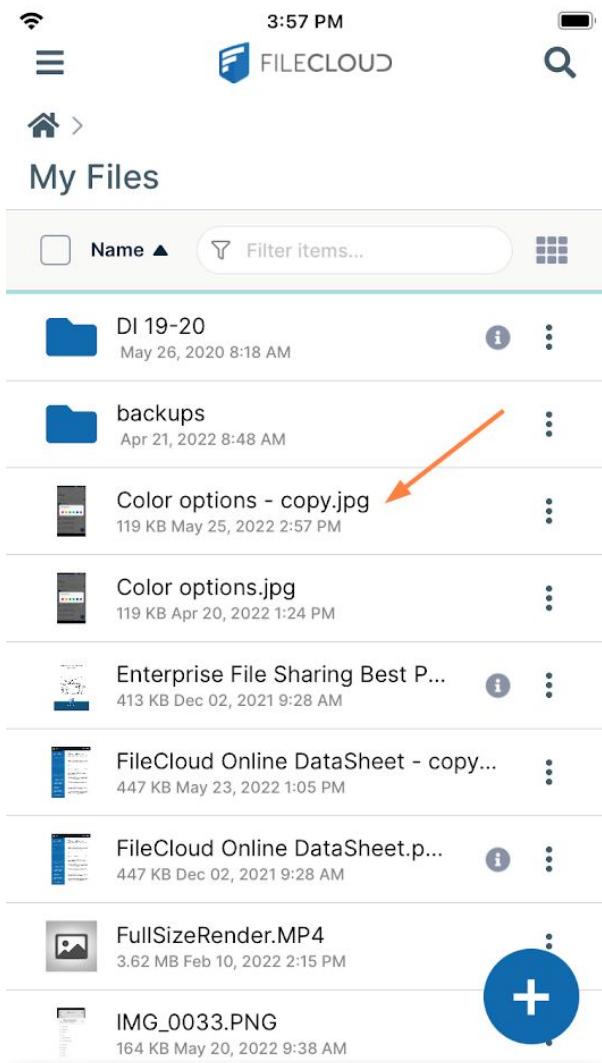

- Open with...
- Download
- Share...
- Star
- Apply color tag...
- Send for approval...
-
- More info
- Rename...
- Copy... ↗
- Move...
- Delete...

A **Duplicate here** message appears at the bottom of the screen.

2. If you want to copy the item into the same location, tap the **Duplicate here** message. If you want to copy the item into another location, navigate to the location, and then tap the **Duplicate here** message.

A copy of the file or folder is created in the location.

To move a single file or folder:

1. Access the file or folder's actions and tap **Move**.

- Open with...
- Download
- Share...
- Star
- Apply color tag...
- Send for approval...
-
- More info
- Rename...
- Copy...
- Move... ↗
- Delete...

Since you are in the same folder as the original item, a message on the screen indicates that you cannot move the item here.

2. Navigate to the location where you want to move the item.

Once you navigate out of the item's current location, a **Move here** message appears at the bottom of the screen.

3. Tap the **Move here** message.

3:58 PM

How to access details tabs for a file or folder

There are two ways to access the details tabs for a file or folder.

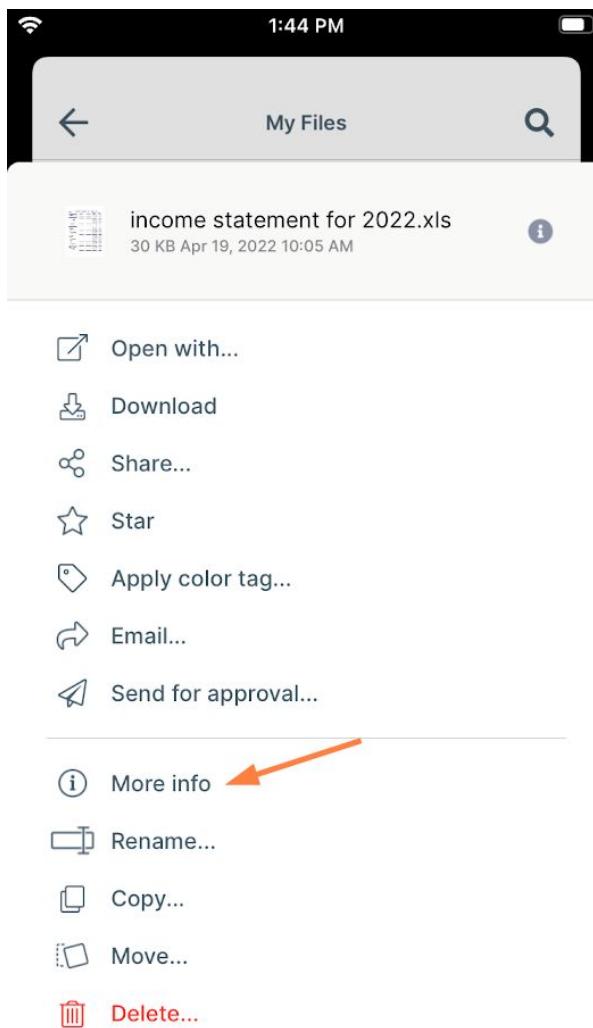

Tap the more icon

1. For any file or folder, tap the more (3 dot) icon next to the file or folder.

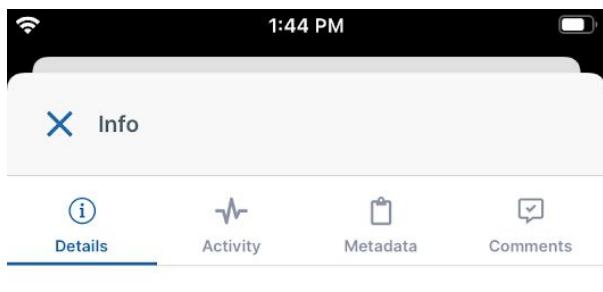

A list of options opens.

2. Tap **More info**.

The **More info** screen opens. From there, you can browse the information on the [Details](#) (see page 189), [Activity](#) (see page 190), [Metadata](#) (see page 191), and [Comments](#) (see page 193) tabs.

Path

A version is a modified copy of a file. Versions can be viewed, but not managed in iOS. However, they can be managed in the user portal.

See [View Previous Versions Of Files](#) for information about managing versions in the user portal.

Viewing Activities in iOS

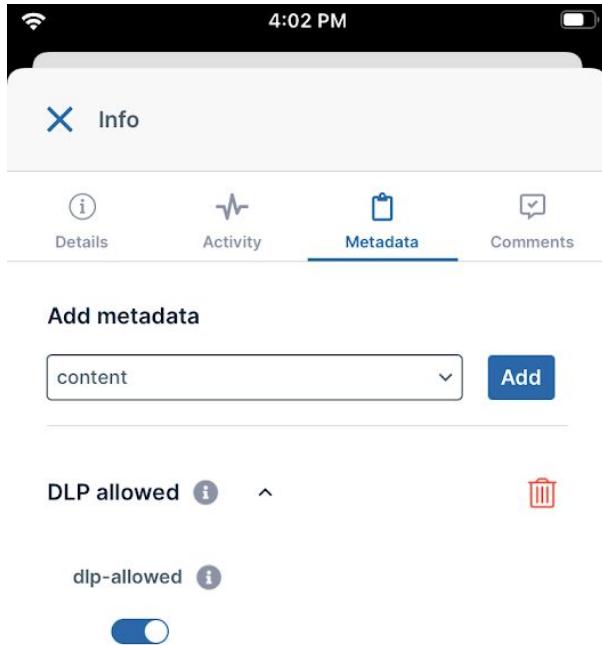

On the **Activity** tab of the **Info** screen, you can view recent activities performed on the file or folder. To access the **Info** screen, see [Viewing File and Folder Information in iOS](#) (see page 184).

Viewing and Adding Metadata in iOS

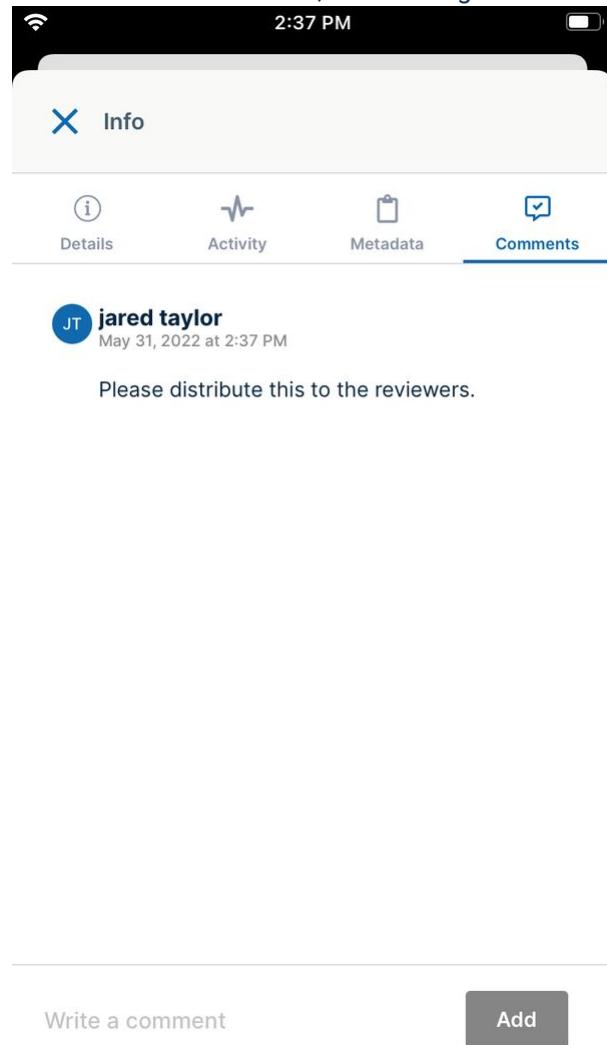

On the **Metadata** tab of the **Info** screen, you can view and add metadata information. To access the **Info** screen, see [Viewing File and Folder Information in iOS](#) (see page 184).

For information about adding metadata to files and folders, see [Adding Metadata](#).

Viewing and Adding Comments in iOS

On the **Comments** tab of the **Info** screen, you can view and add comments about the file or folder. To access the **Info** screen, see [Viewing File and Folder Information in iOS](#) (see page 184).

To add a comment to a file or folder, enter a comment in the comment box, and then click **Add**. Note that you cannot tag a user in a comment added in iOS as you can when you add a comment in the user portal.

File Locking in iOS

File and folder locking is available beginning in version 23.232 of iOS.

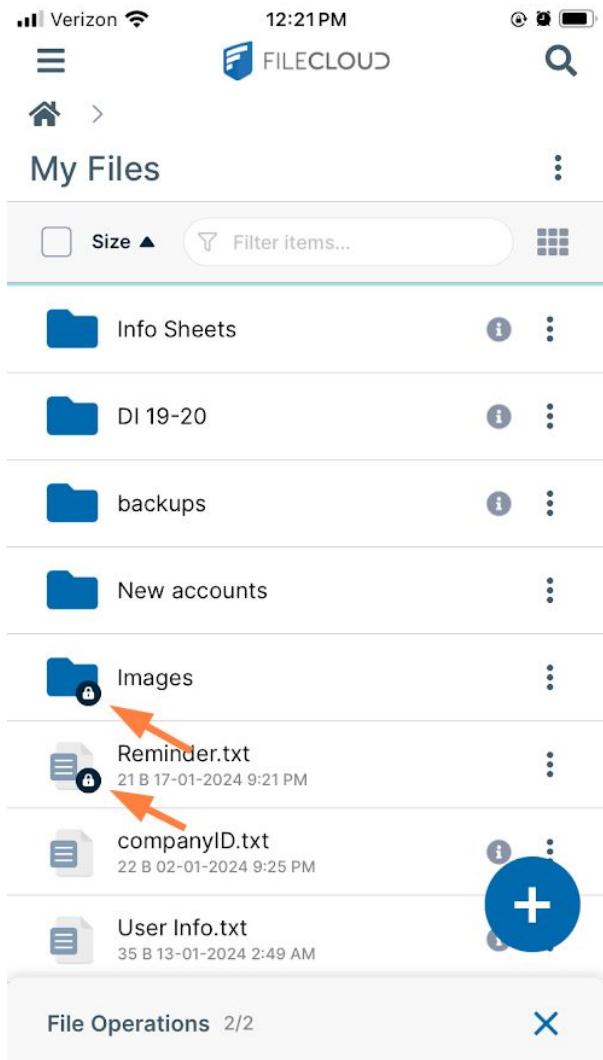

Locking is available for both files and folders in iOS. It indicates that you are actively editing that file or folder and don't want others to edit it as well.

Locking must be enabled by your administrator in FileCloud to enable you to lock a file or folder.

When a file or folder is locked in iOS:

- A lock icon overlays the file or folder:

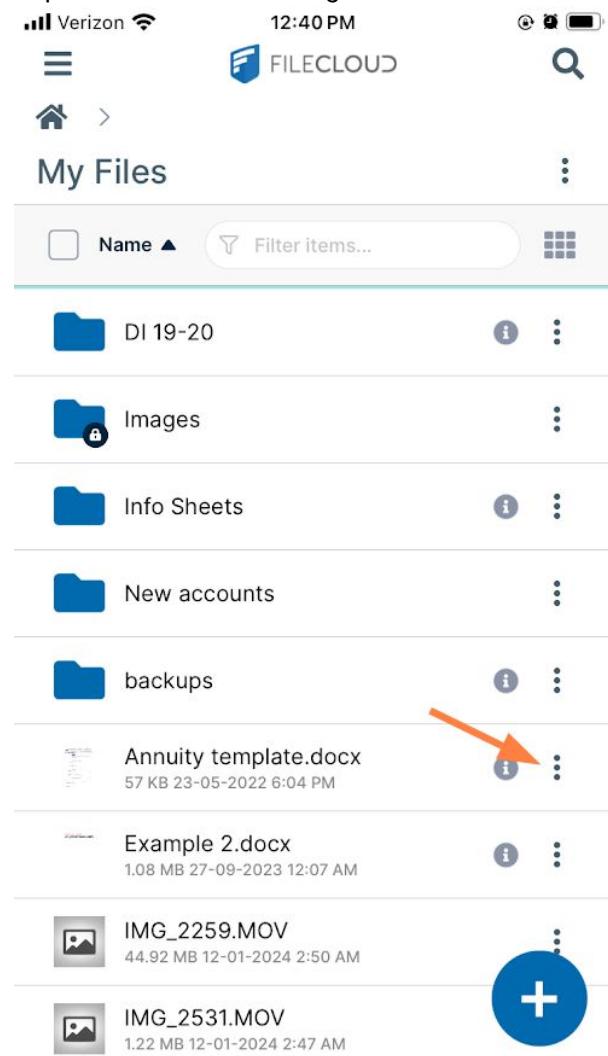

- The owner of the lock has full access to that file or folder and can modify it.
- Admins can always override a lock using the admin panel.
- A lock can be set up to prevent the locked file from being read. In that case other users cannot download or view the locked file or folder.
- The following table shows the behavior depending on the type of lock.

Lock type	Access by lock owner	Access by others
Read permitted	Full access to the file is available. Share/ Sync/Edit/Delete allowed.	Only read is allowed. No modification is allowed.
Read not permitted	Full access to the file is available. Share/ Sync/Edit/Delete allowed.	No access is provided. All access using all clients is blocked.

Locking a File or Folder in iOS

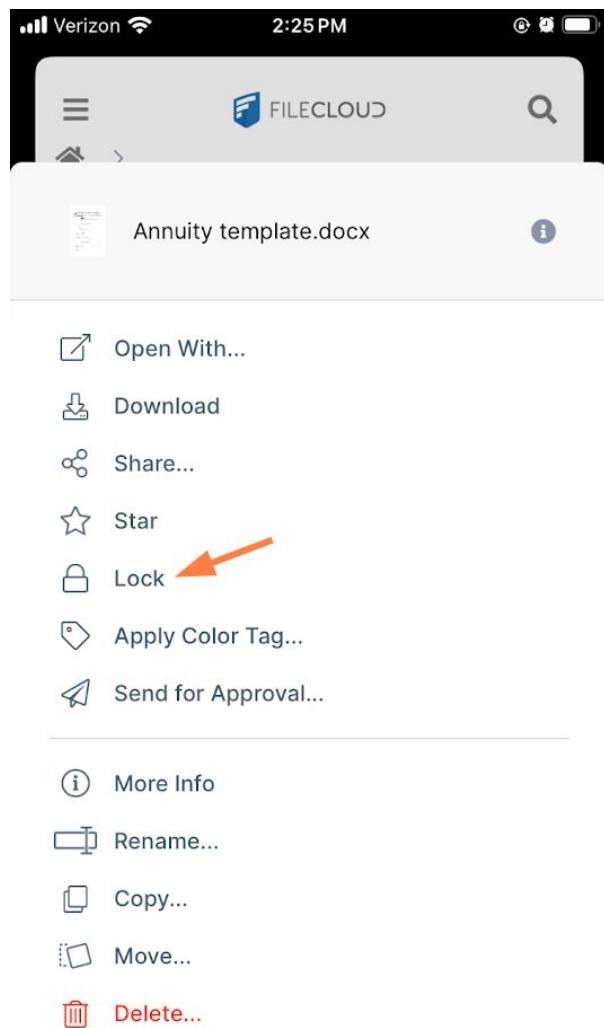

To lock a file or folder:

a. Tap the More icon to the right of the file or folder.

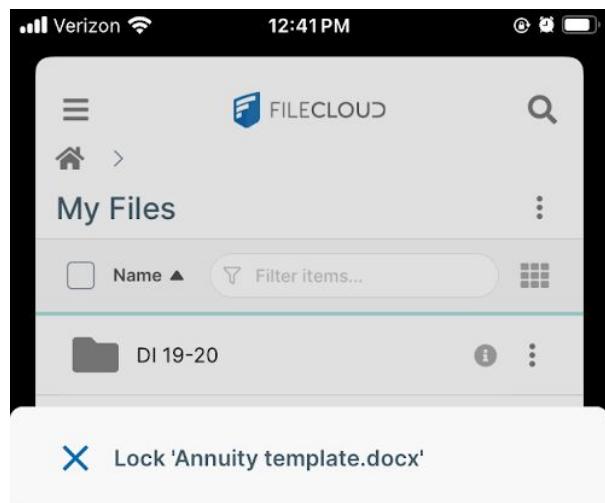

A list of actions for the file opens.

b. Tap **Lock**.

A popup with lock options opens.

- c. To prevent the item from being modified by other users but to allow them to continue to download and read it, just tap **Lock**.
To prevent others from modifying, downloading and reading check **Prevent others from downloading this file while locked** before tapping **Lock**.
To set an expiration date for the lock, tap the **Expires** slider and choose an expiration date.

You are about to lock the selected file

Locking indicates that you are actively working on this file and prevents others from modifying it

Prevent others from downloading this file while locked

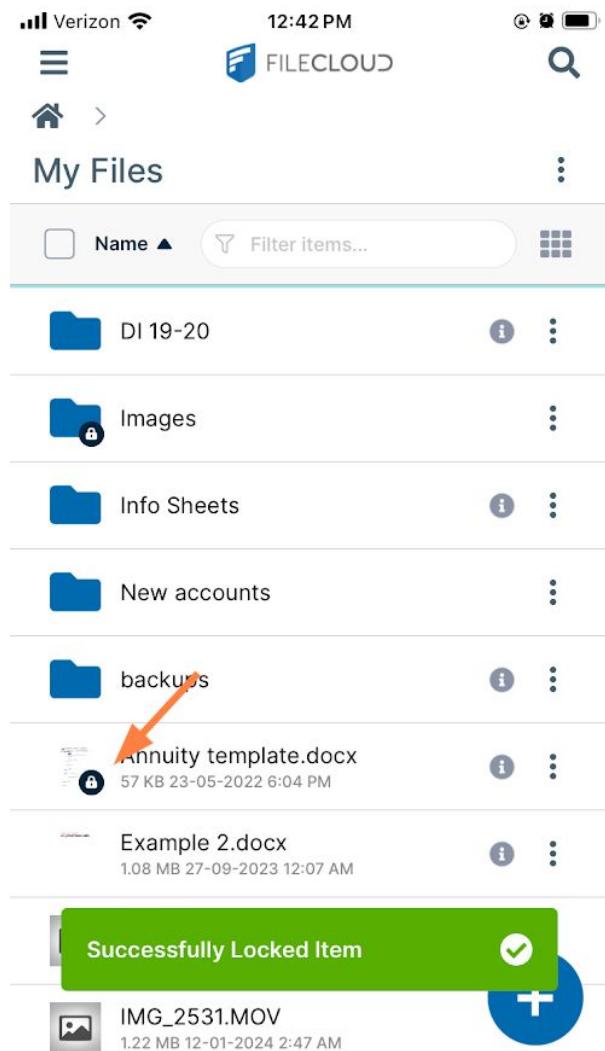

Expires

Jan 20, 2024

12:41 PM

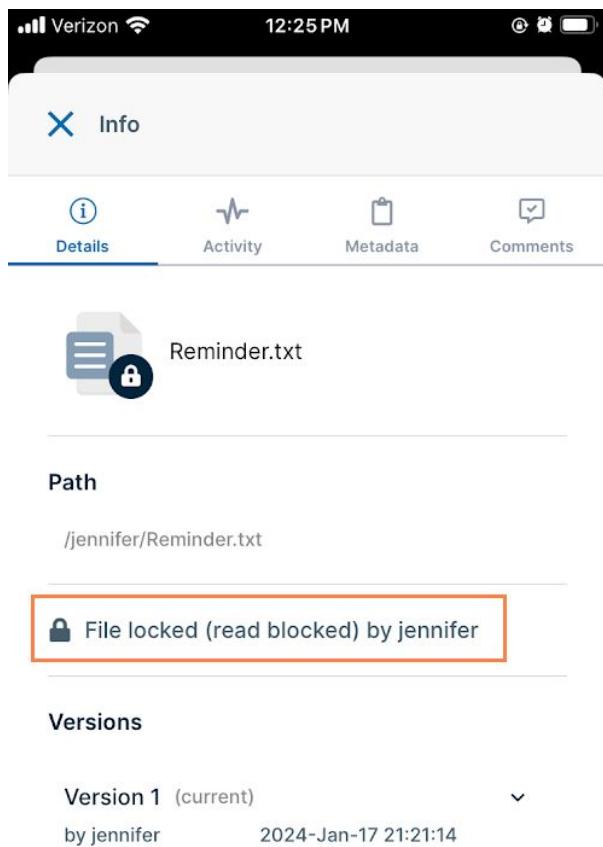

Cancel **Lock**

- d. The popup closes and a lock icon appears on the item.

To view information about a lock

You can see who locked a file and if other users are not permitted to read it by [accessing the Details tab \(see page 184\)](#) (tap the More icon at the end of the file's row and choose **More Info**, or, if there is an info icon for the file, tap the Info icon).

by jennifer 2024-Jan-17 21:21:14

To unlock a file or folder

1. Tap the More icon to the right of the file or folder.
The list of actions for the file or folder opens, but shows **Unlock** instead of **Lock**.
2. Click **Unlock**.

The item is unlocked and the lock icon no longer appears over it.

File Approval in iOS

The ability to request file approval is available beginning in FileCloud 21.2.

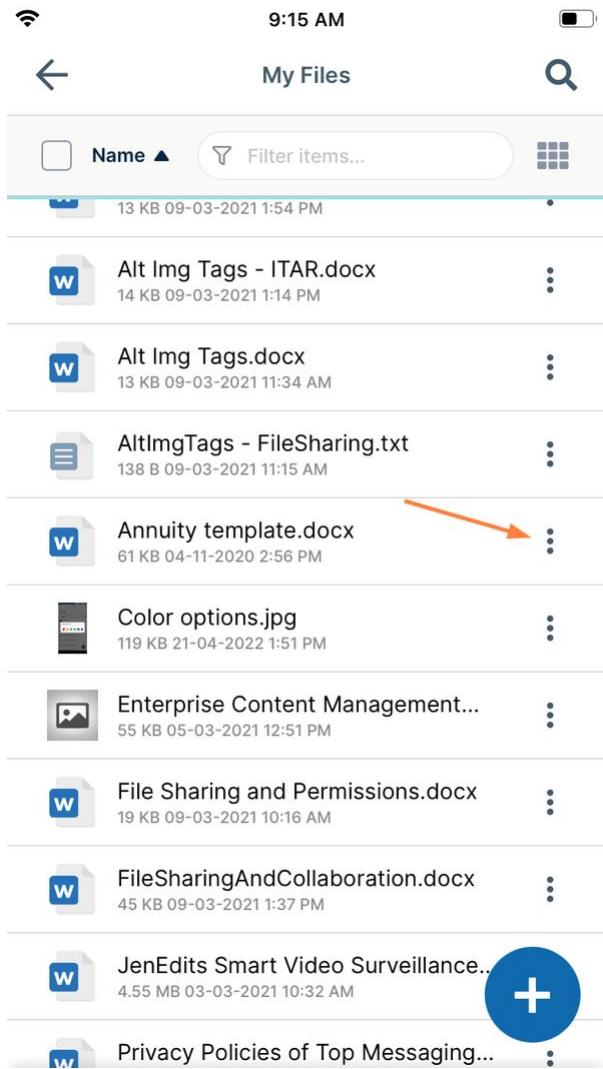

Admins: Disabling file approval through user policies is available beginning in 23.241.6. See [Disabling Send for Approval](#).

Users can send files to another user for approval and receive an approve or reject response. The response does not change the file's status; the person who requests approval can take any next action on the file whether it is approved or rejected.

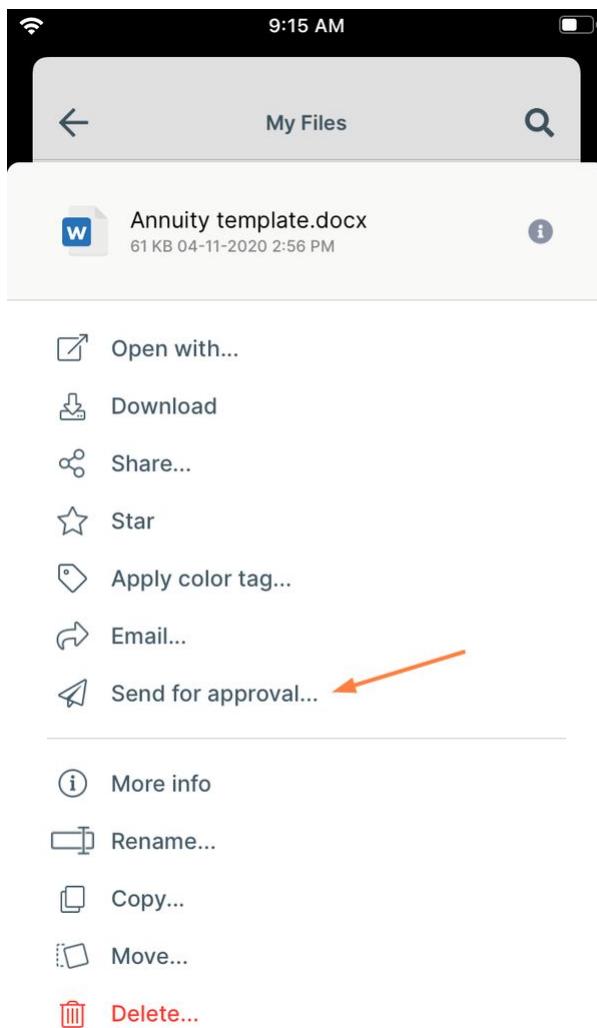

From your iOS device, you can check if files have been sent to you for approval and if files you have sent for approval have been approved or rejected. You can approve, reject, or send a comment about a file that has been sent to you for approval, and you can exchange comments with an approver that you have sent a file to.

To request approval of a file:

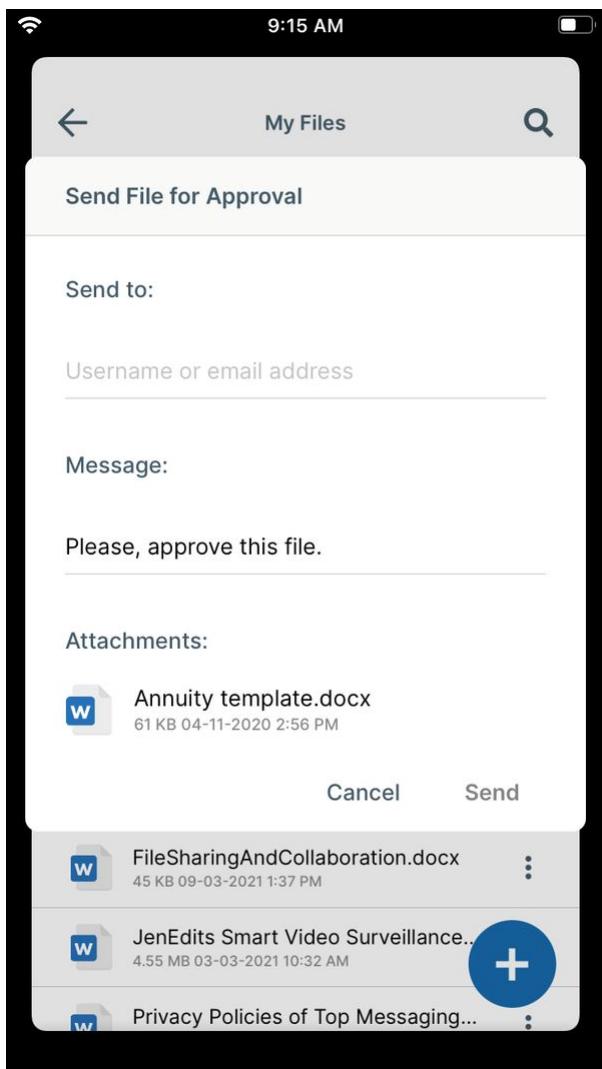

1. Log into the FileCloud app and navigate to the file that you want to send for approval.

2. Tap the more (3 dot) icon for the file, and then choose **Send for Approval**.

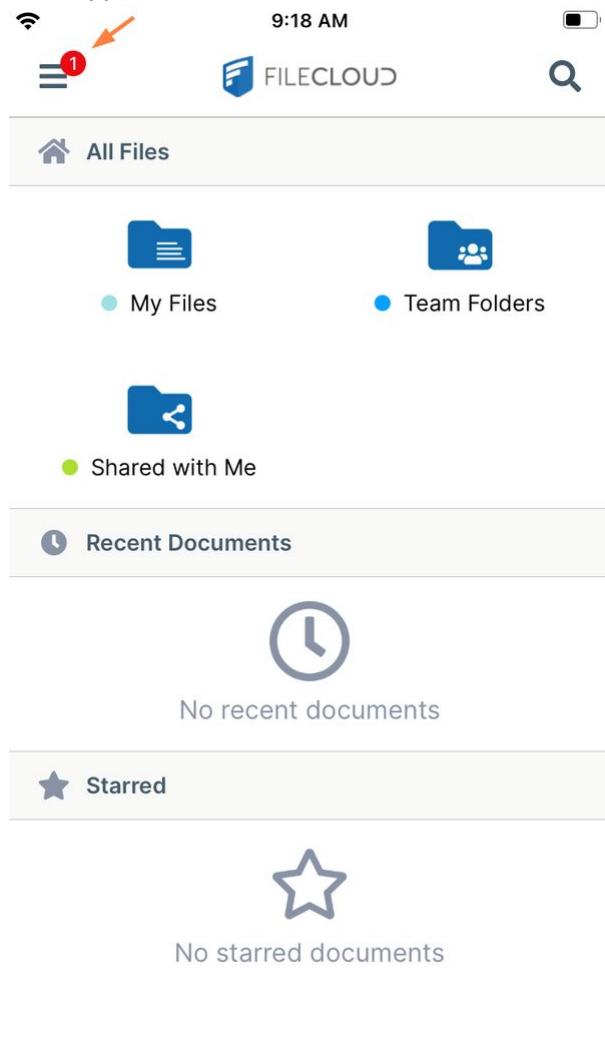

A **Send File for Approval** dialog box opens.

3. In **Send to**, enter the usernames or email addresses of existing FileCloud users.
4. You may change the note in **Message** or leave the default of **Please, approve this file**.
5. Tap **Send**.

The approval is sent to the approvers' inboxes in FileCloud.

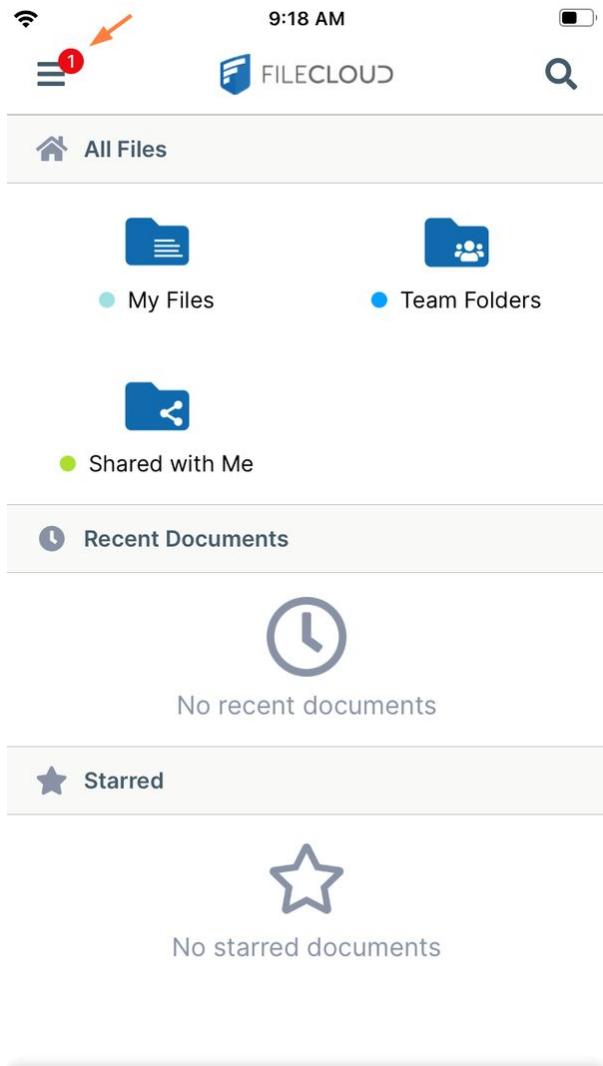

Each approver will receive a notification alert, and can proceed to approve or reject the file.

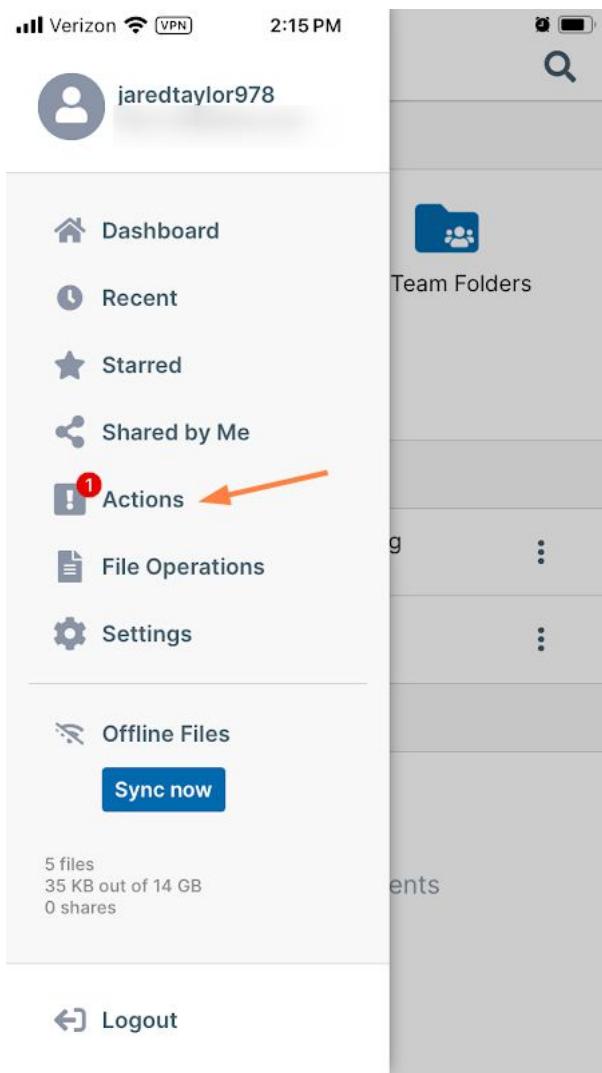

Approving files in iOS

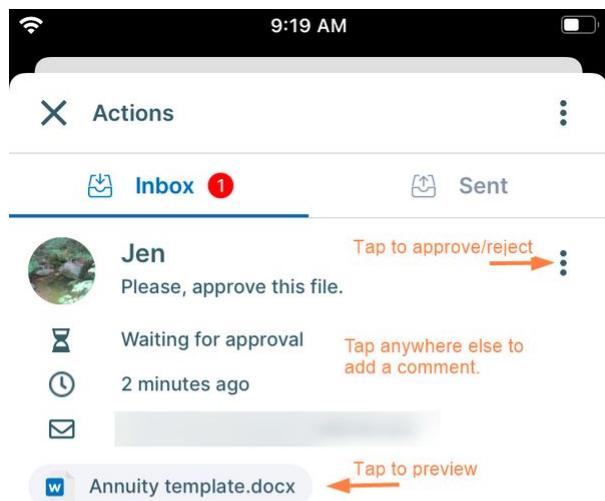

To check for approve activities on your iOS device:

1. Log into the FileCloud app on your iOS device.
A red dot overlays the menu icon in the upper-left corner to indicate that a file is awaiting your approval.
2. Tap the menu icon.

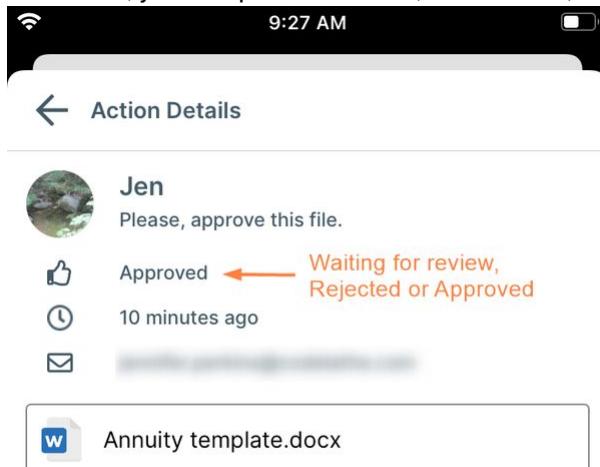

The **Actions** screen opens to the **Inbox** tab. The **Inbox** tab shows files waiting for your approval. From here, you can either approve or reject a file, view details, add a comment, or preview it.

4. Tap the **Sent** tab to see files that you have sent for approval.
Status is either **Waiting for review**, **Rejected**, or **Approved**.

From here, you can preview the file, view details, or add a comment.

In the user portal, the user who sent the file for approval receives a notification of the comment and can view the comment from there, or can view the comment in the approval request on their mobile device.

For instructions on approving or rejecting files in the user portal, see [File Approval](#).

iOS Automatic Photo and Video Backup

You can automatically upload photos and videos from your mobile device to FileCloud.

⚠ This feature must first be enabled on the server by your administrator.

Frequently Asked Questions

How often is the backup done?

The iOS app cannot operate (or start automatically) in the background, so when the user starts the app, it checks and initiates the backup.

What if the FileCloud App goes to the background?

Once the FileCloud app is started, in most cases, it tries to complete the upload even when the app is in background.

What happens if a file is removed on the FileCloud server?

If a photo or video is present in the iOS device but is deleted, renamed, or moved in the remote FileCloud server, then:

- The FileCloud iOS app treats the file as a new local image and uploads it to the server.
- The only way to prevent the file from being uploaded is to manually delete the file in the iOS device itself.

What happens if the FileCloud Server folder is full?

In the following cases:

- The folder on the remote FileCloud Server is not available
- The folder on the remote FileCloud Server has been deleted
- The folder on the remote FileCloud Server is full

The iOS app will not upload any more photos or videos until that issue is resolved.

💡 The status will be set to “Exception” in the app.

Is there a size limit when uploading?

There is no limit on the number or size of photos or videos that can be uploaded to FileCloud.

The only requirement is that you need to have enough free space to allow the app to import the photo or video first and then upload it.

- For example, if you have a 100MB video file, then you must have at least 110MB of free space.
- Once upload is completed, the temporary file is deleted

For Administrators: Enabling Automatic Backup

To enable automatic camera uploads:

Note: The Allow Sync Apps setting in Server Settings must be enabled for Allow camera uploads to work. By default Allow Sync Apps is enabled.

1. In the FileCloud admin portal's left navigation bar, scroll down and click **Settings**. Then, on

the **Settings** navigation page, click **Endpoint Backup**.
The **Endpoint Backup** settings page opens.

2. Enable **Allow camera uploads**.

About

Now the pictures and videos you take on your device are automatically backed up to your FileCloud Server.

Star a File or Folder in iOS

You can star your favorite files and folders in FileCloud. The Starred folder appears on the dashboard. You can also access it by tapping **Starred** in the navigation pane.

To add a file to starred:

1. Open the FileCloud App.
2. Navigate to the file or folder you want to star.
3. Tap the more (three dot) icon next to the file or folder.

1:19 PM

FILECLOUD

- Copy...
- Move...
- Delete...

Now a star appears next to the file or folder:

The screenshot shows the FileCloud mobile application interface. At the top, there are standard iOS status icons: signal strength, battery level, and a lightning bolt for charging. The center top features the 'FILECLOUD' logo. Below the header, the navigation path is shown as 'My Files > Web Content'. The main content area is titled 'Web Content' and displays a list of files. Each file entry includes a small icon representing the file type (e.g., PDF, Word document, text file), the file name, its size, and the date it was last modified. To the right of each file name is a vertical ellipsis (three dots) for more options. A red arrow points to the yellow star icon next to the file 'CD records.pdf', which is the second item in the list. The file 'CD records.pdf' is a PDF document from 311 KB, last modified on 28-05-2020 at 11:23 AM. The list also includes 'Bank Account statement.pdf', 'Insurance Policy - Copy.docx', 'Insurance Policy.docx', 'InternalAccts.txt', 'Mortgage - Copy.rtf', and 'copies of insurance payments.pdf'. A large blue circular button with a white plus sign is located at the bottom center of the screen, likely for adding new files.

Apply Color Tag Metadata in iOS

Color tag metadata enables you to assign colors to files and folders for categorization and searching.

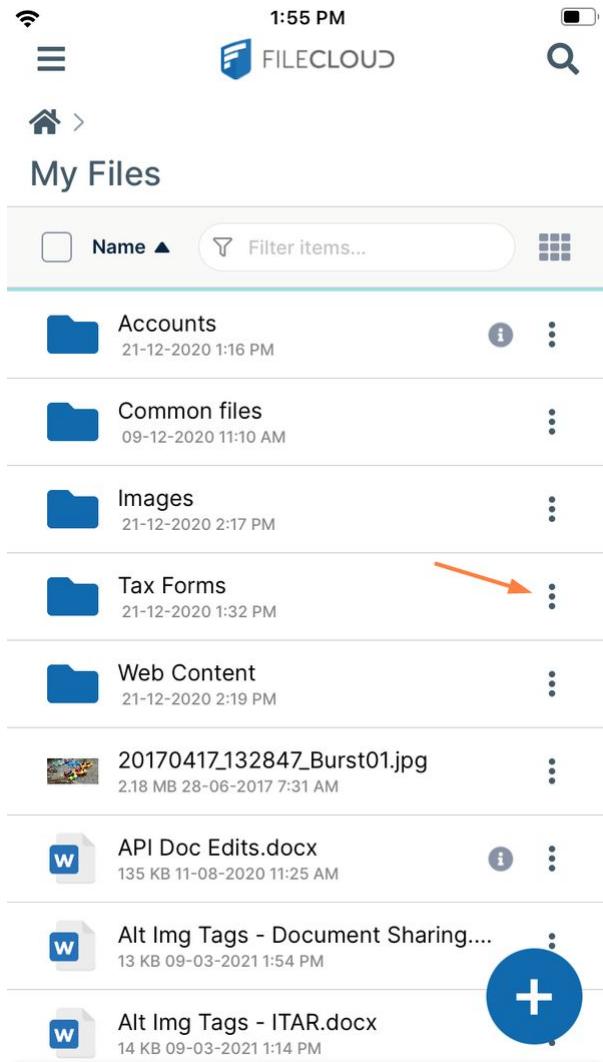

For admins

For more information about color tag metadata, see [Working with Built-In Metadata](#).

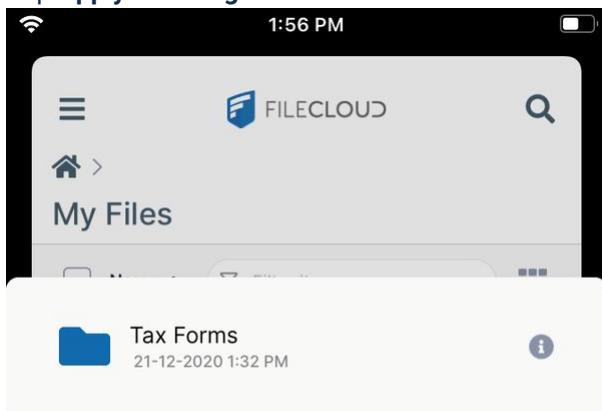

To apply a color tag to a file or folder:

1. Open the FileCloud App.
2. Navigate to the file or folder you want to apply the color tag to.

3. Tap the more (three dot) icon next to the file or folder.

4. Tap **Apply color tag**.

Download...

Share...

Copy...

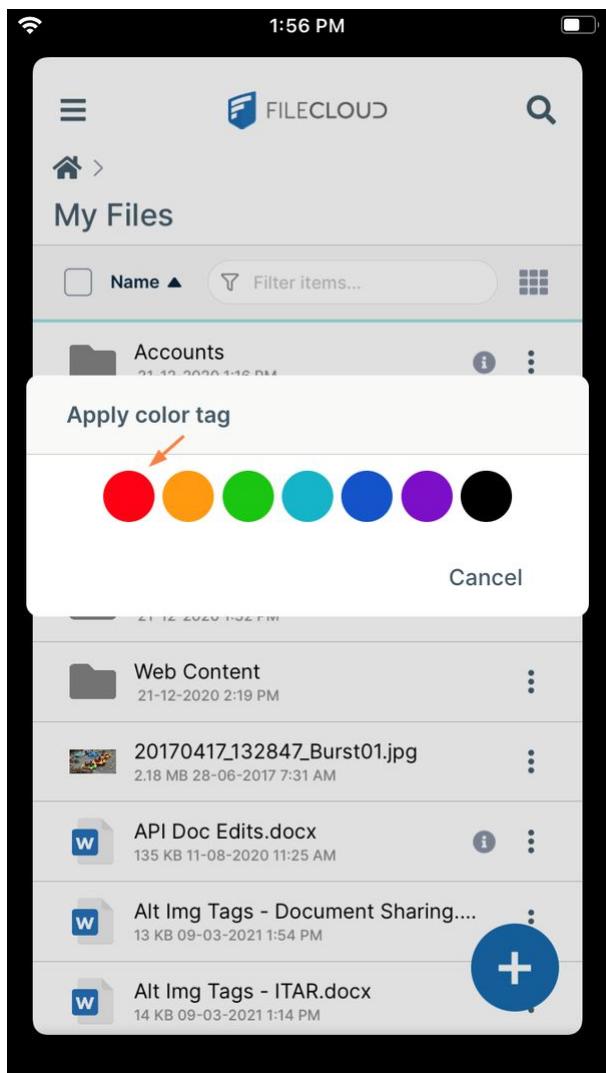

Move...

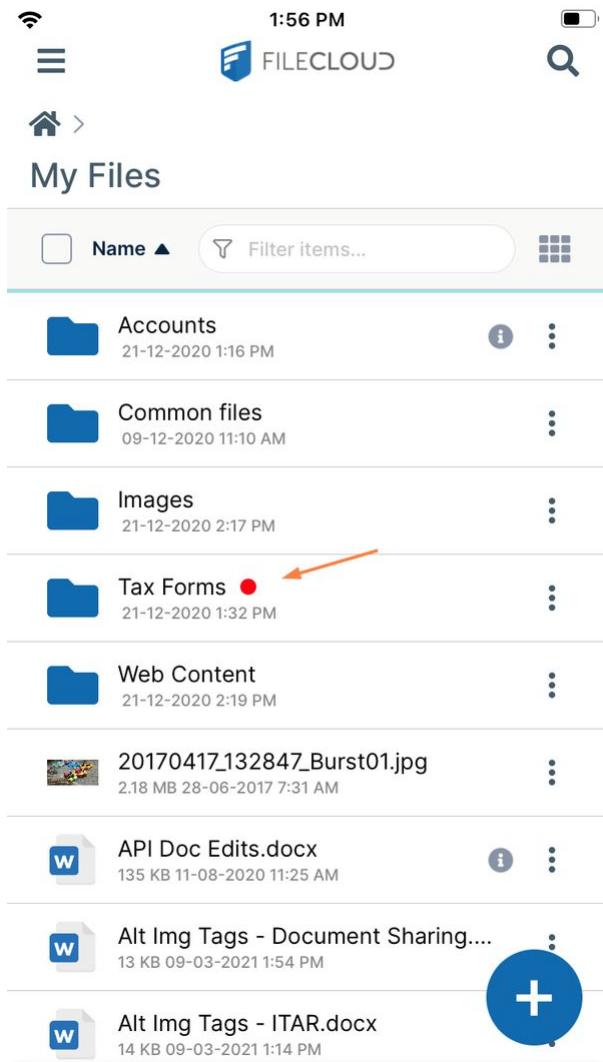

Delete...

A pop-up displays colors.

5. Tap the color that you want to apply.

The color tag appears next to the file or folder.

Searching on FileCloud in iOS

File and folder name search as well as content search are available in FileCloud on iOS; however, the content search feature is only available if it is configured in your system. Searching is case-insensitive.

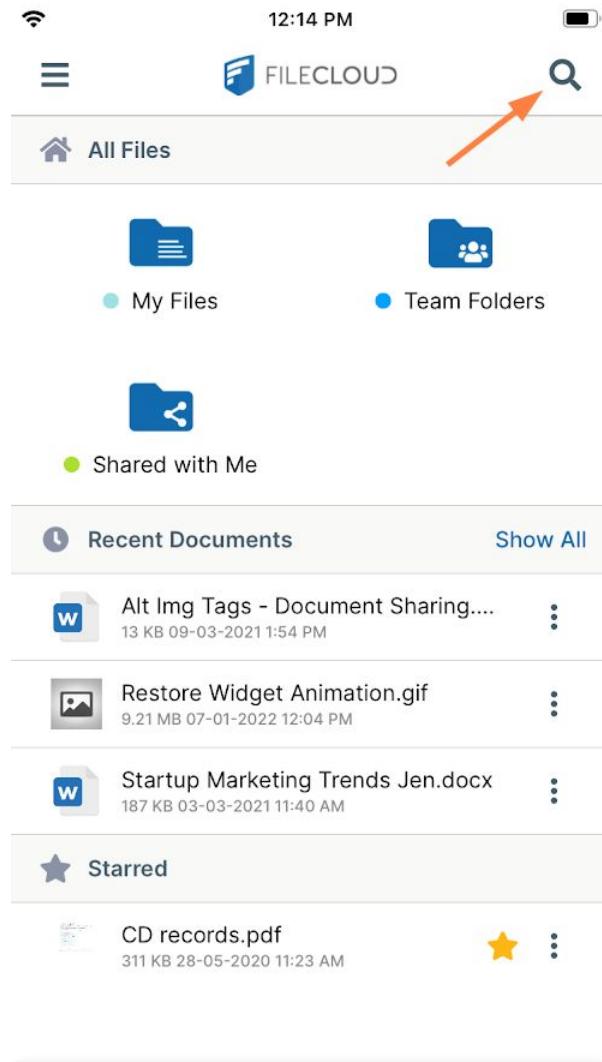

Content search hits are returned with the matching string emphasized except in the case of lengthy search results, where omitting emphasis achieves quicker response time.

To perform a search:

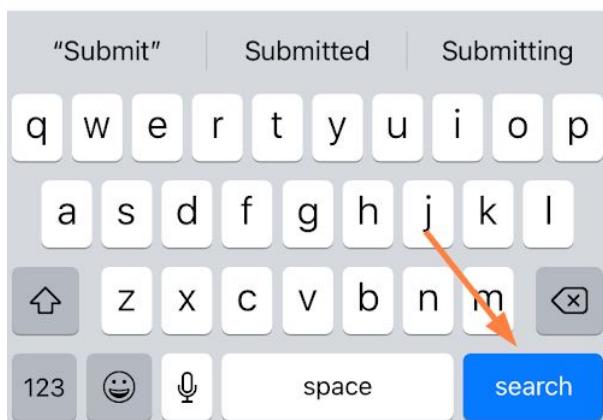

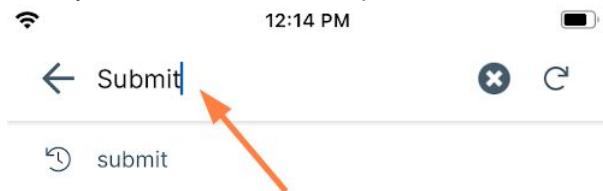

1. In the FileCloud iOS app, navigate to the folder that you want to search, or remain in the dashboard to search all files and folders.

Note that searches only look in the selected folder and its sub-folders. It does not search in parent folders.

2. Tap the Search icon in the upper right corner.

3. Enter your search term, and tap **Search**.

Your search results are listed. Content search results are bolded.

12:13 PM

← Results for "Submit" × ⟳

Tips and Tricks.txt

114 B - 08-06-2022 11:11 AM

1. Do not click **submit** more than once. 2.
Instead of entering your address twice,
check the same

🏠 > jennifer

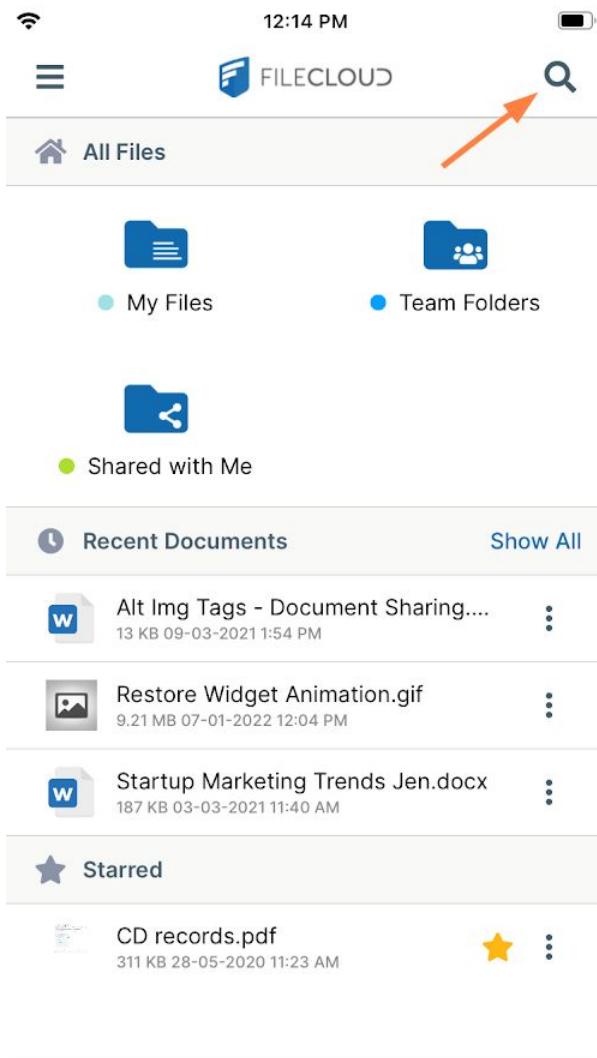

4. Perform any of the following actions after the search results are returned:

- Tap a file to preview it or tap a folder to open the location.
- Tap **x** in the search bar to perform another search.
- Tap the back arrow to return to the folder.

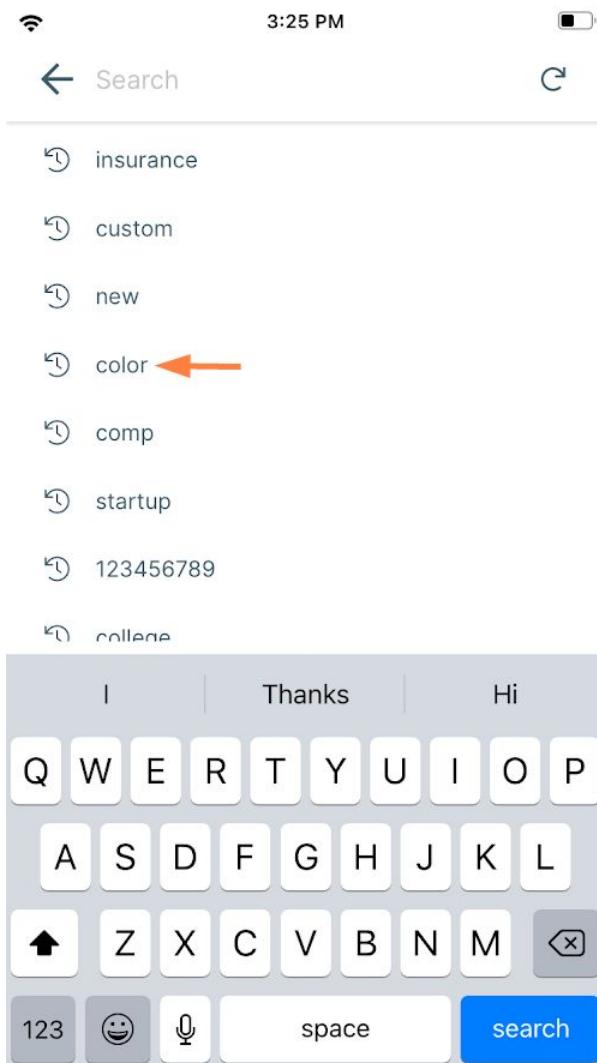

To view prior search results:

After you perform a search, the results are cached.

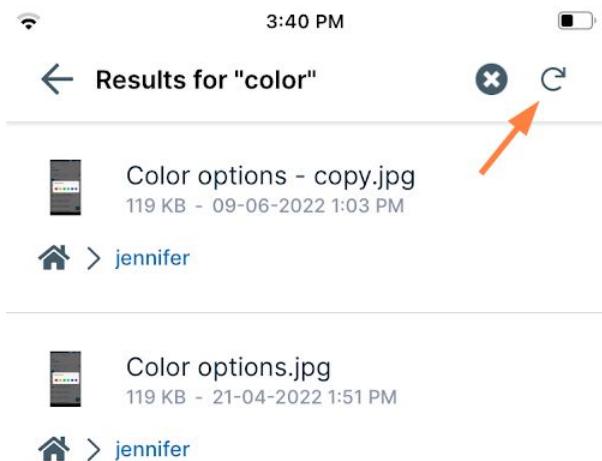

1. Tap the Search icon.

2. Tap on a prior search listed under the search box to see the cached results of the search.

3. To discard the cached results and perform the search again, tap the repeat icon.

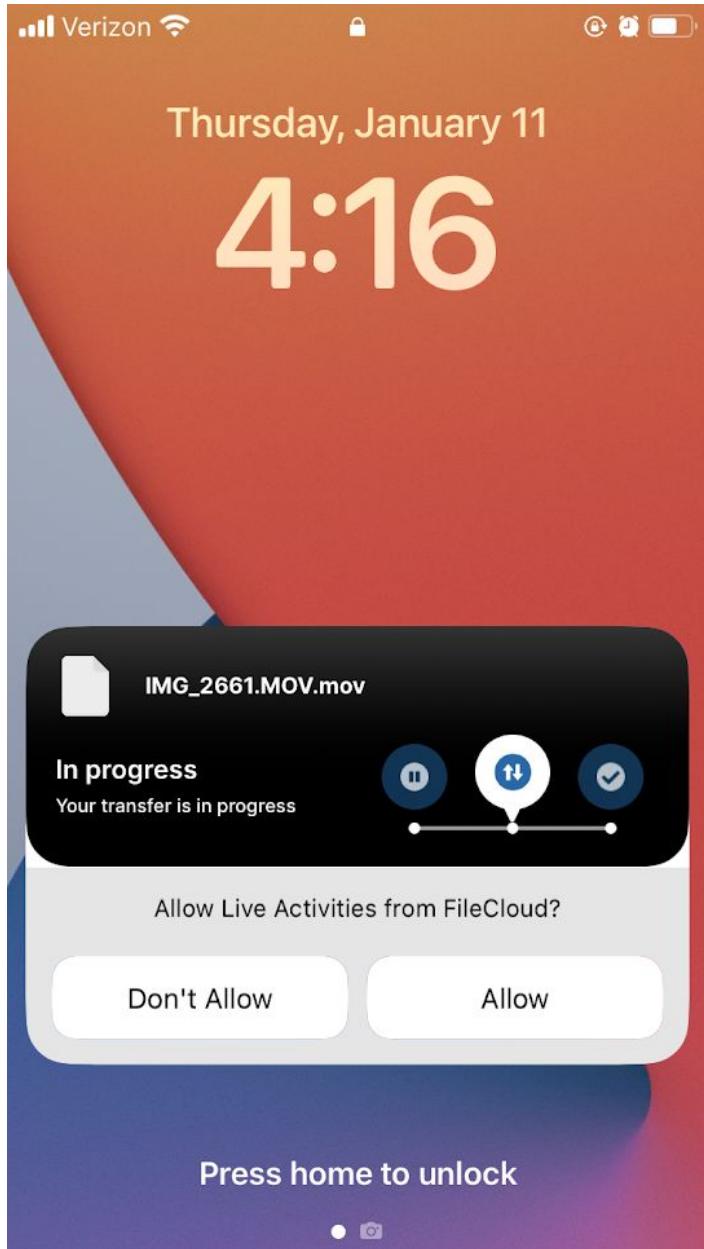

View Uploads and Downloads with FileCloud Live Activities

The ability to view FileCloud live activities in iOS is available in version 23.232 and higher. The live activities feature is only available on devices that use iOS 16.1 and higher.

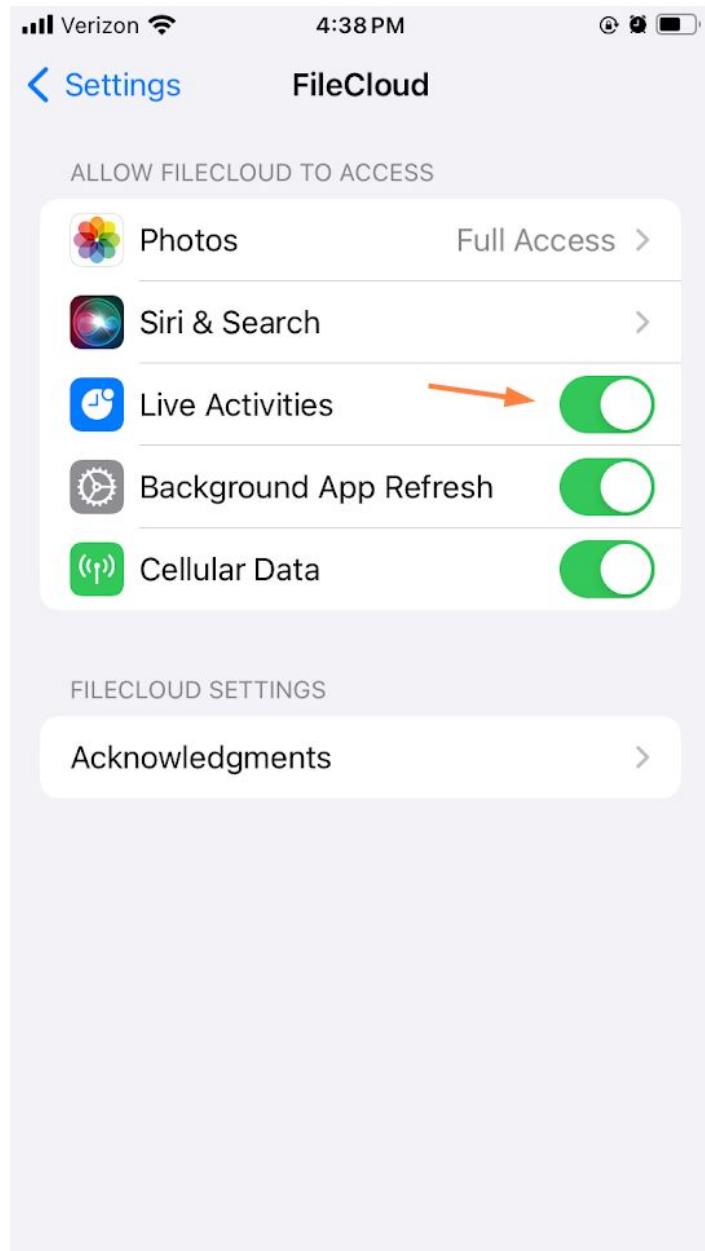

By default, the status of a file upload or download from your FileCloud account is displayed on your device when the FileCloud app is in the background or your device is locked.

If you don't want to show FileCloud live activities on your lock screen, click **Don't Allow**.

You can also go to your iOS settings and click the FileCloud icon to view FileCloud access settings. From there, toggle the **Live Activities** slider to show/not show FileCloud live activities on your lock

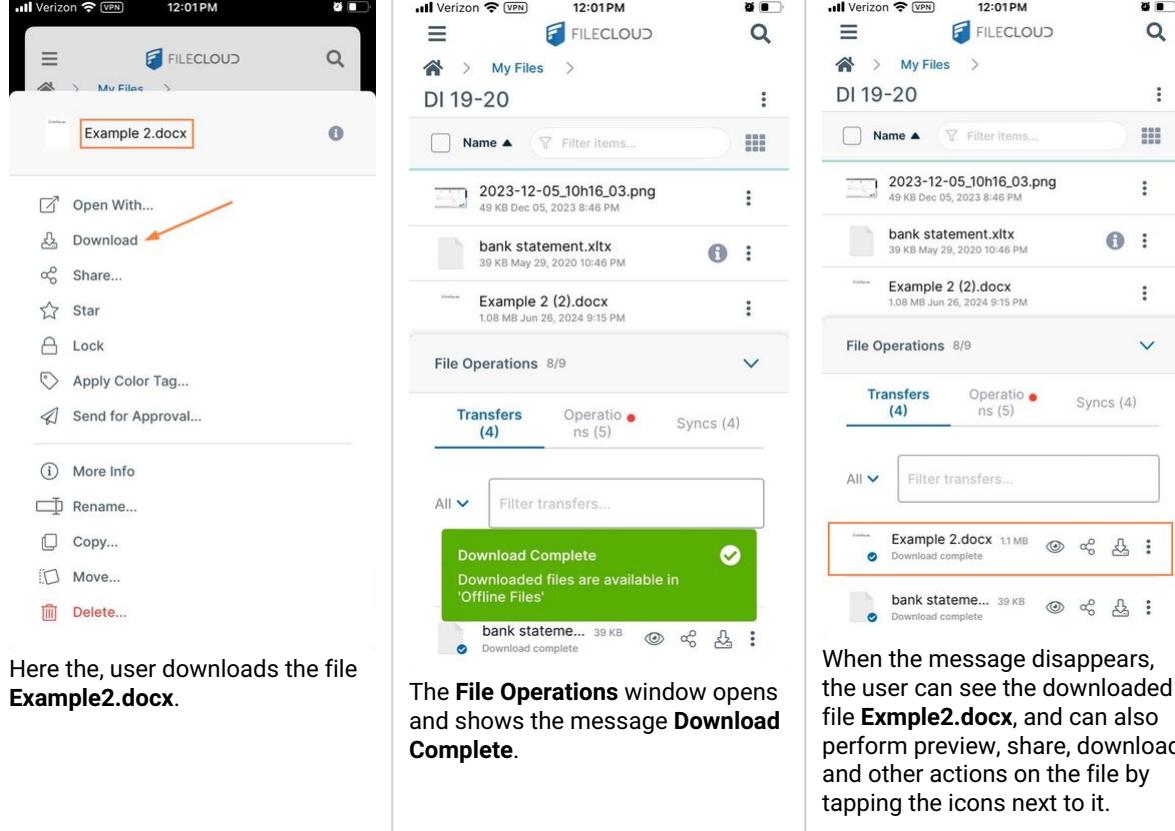

screen.

View File Operations in iOS

You can view records of recent uploads and downloads, copies and moves, and sync operations in the **File Operations** window.

The **File Operations** window opens automatically after you perform one of these operations. If the operation is still being performed, the window shows you its progress; if the operation completed successfully the window displays a Complete message. When the progress bar or message disappears, you can see records of the operation and previous operations.

The screenshots illustrate the process of downloading a file from the FileCloud mobile application.

Left Screenshot: A file named "Example 2.docx" is selected. A red arrow points to the "Download" option in the context menu, which is highlighted with a red box.

Middle Screenshot: The "File Operations" window is open, showing a "Transfers (4)" tab. A green message box displays "Download Complete" and "Downloaded files are available in 'Offline Files'".

Right Screenshot: The "File Operations" window is open, showing the "Transfers (4)" tab. The file "Example 2 (2).docx" is listed with a "Download complete" status, indicated by a green box and a checkmark icon.

Text Labels:

- Left: "Here the, user downloads the file Example2.docx."
- Middle: "The **File Operations** window opens and shows the message **Download Complete**.
- Right: "When the message disappears, the user can see the downloaded file **Example2.docx**, and can also perform preview, share, download and other actions on the file by tapping the icons next to it."

If the file completes with an error, a red dot appears next to its tab, and when you click the tab, the file is shown with an error message.

The screenshot shows the FileCloud mobile application interface. At the top, there is a navigation bar with icons for signal strength, Verizon, VPN, time (3:58 PM), battery level, and a search icon. Below the navigation bar, the main header reads "FILECLOUD" with a logo. The current location is "My Files > Info Sheets".

The "Info Sheets" list displays three items:

- FileCloud Online DataSheet... (447 KB May 23, 2022 11:35 PM) with a details icon and a three-dot menu icon.
- FileCloud Online DataSheet.... (447 KB May 28, 2022 12:31 AM) with a details icon and a three-dot menu icon.
- test.png (59 KB Apr 27, 2023 8:11 PM) with a details icon and a three-dot menu icon.

Below the list is a "File Operations" section with a dropdown showing "22/23". It includes tabs for "Transfers (5)", "Operations (18)" (which is selected and highlighted in blue), and "Syncs (5)".

The "Operations" tab shows a "Failed" section with a dropdown and a "Filter operations..." input field. A single failed operation is listed:

- test.png 59 KB CLFC-01482 Source and Destination paths are the same (/jennifer/Info Sheets/test.png to /jennifer/Info Sheets/test.png)

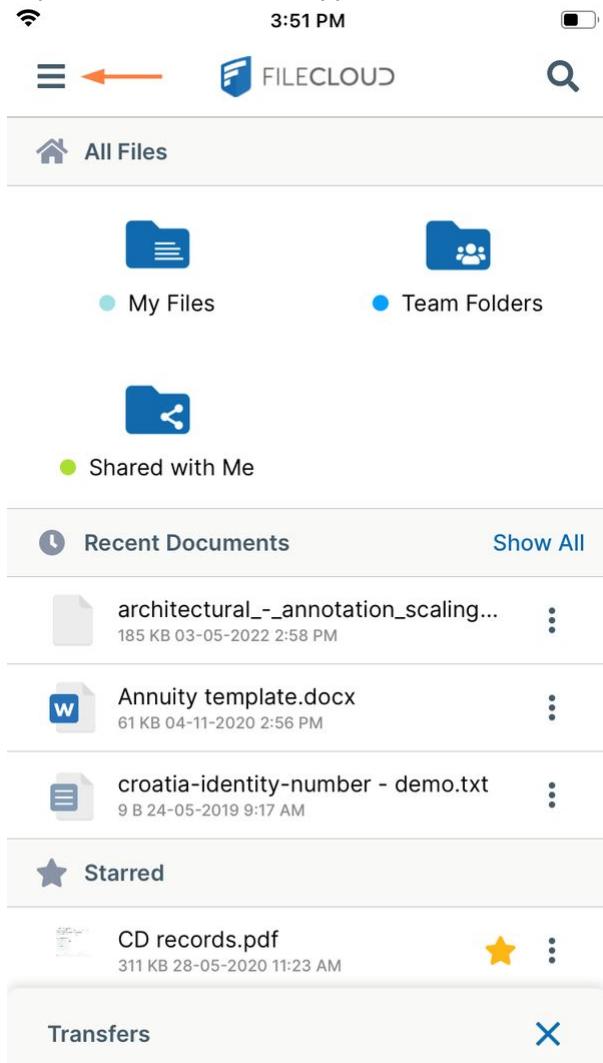

At the bottom of the operations section are "Duplicate" and "Cancel" buttons.

You can also open the **File Operations** window manually to view records of recent operations.

Opening the File Operations window manually

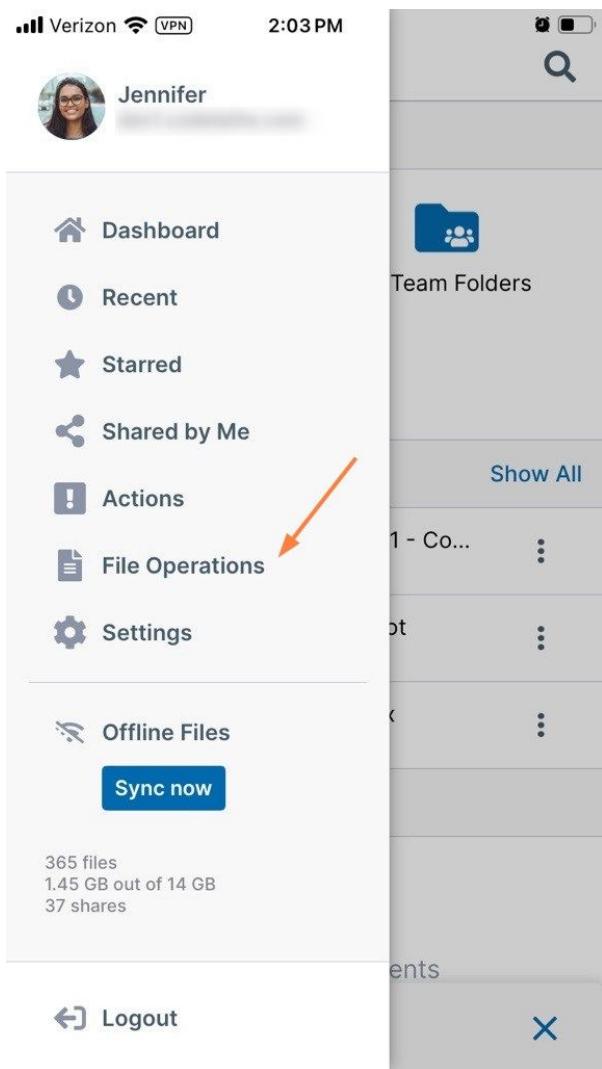

To open the File Operations window manually:

1. Tap the menu icon in the upper left of the screen.

A navigation pane opens.

2. Tap **File Operations**.

3. The **File Operations** window opens to the **Transfers** tab or the last tab you opened.

The screenshot shows the FileCloud mobile application interface. At the top, there is a navigation bar with icons for signal strength, Verizon, VPN, the time (2:04 PM), battery level, and a search icon. The main header is 'FILECLOUD'. Below the header, the title 'All Files' is displayed with a house icon. The interface is divided into several sections:

- File Categories:** 'My Files' (blue folder icon), 'Team Folders' (blue folder with people icon), and 'Network Shares' (blue folder with network icon).
- Recent Documents:** A section titled 'Recent Documents' with a clock icon, followed by a 'Show All' link.
- File Operations:** A section titled 'File Operations' showing '9/9' items, with a dropdown arrow icon.
- Transfers:** The active tab, showing '4' items. A sub-section shows 'All' items with a dropdown arrow and a 'Filter transfers...' input field.
- File Details:** Two file entries are shown:
 - Example 2.docx**: 1.1 MB, Download complete. Includes icons for eye, share, download, and more.
 - bank stateme...**: 39 KB, Download complete. Includes icons for eye, share, download, and more.

The Transfers tab (uploads and downloads)

The **Transfers** tab lists all recent upload and download operations.

You can filter which transfers are shown by tapping the **All** drop-down arrow and choosing an option.

The Operations tab (copies and moves)

The **Operations** tab lists all recent copy and move operations.

You can filter which operations are shown by tapping the **All** drop-down arrow and choosing an option.

Resolving issues on the Operations tab

If a copy or move fails, the **Operations** tab displays a red dot. To view failed operations, choose **Failed** in the **Filter operations** drop-down list.

If there is a way to resolve the failure, buttons under the issue give you the option of resolving it or cancelling it.

If you attempt to copy a file or folder into its original location, the copy operation fails, but gives you the option of duplicating the file in the location or cancelling the operation.

If you tap **Canceled**, the **Duplicate** and **Cancel** buttons are removed. (Now the listing can be found by filtering on **Canceled** instead of **Failed**).

If you tap **Duplicate**, a copy of the file with a number appended to it is added to the same location, and the failed result is replaced with a successful one.

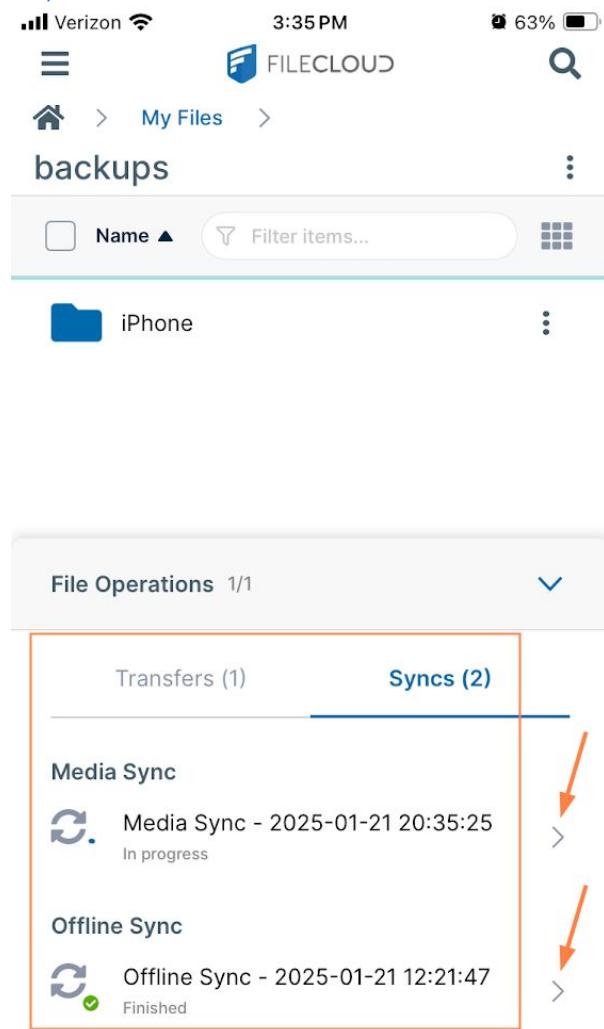

The Syncs tab (offline sync and media sync operations)

To view the results of Sync operations:

1. Select the **Syncs** tab if it is not already selected.

The **Syncs** tab lists the most recent offline sync operation, either in progress or recently

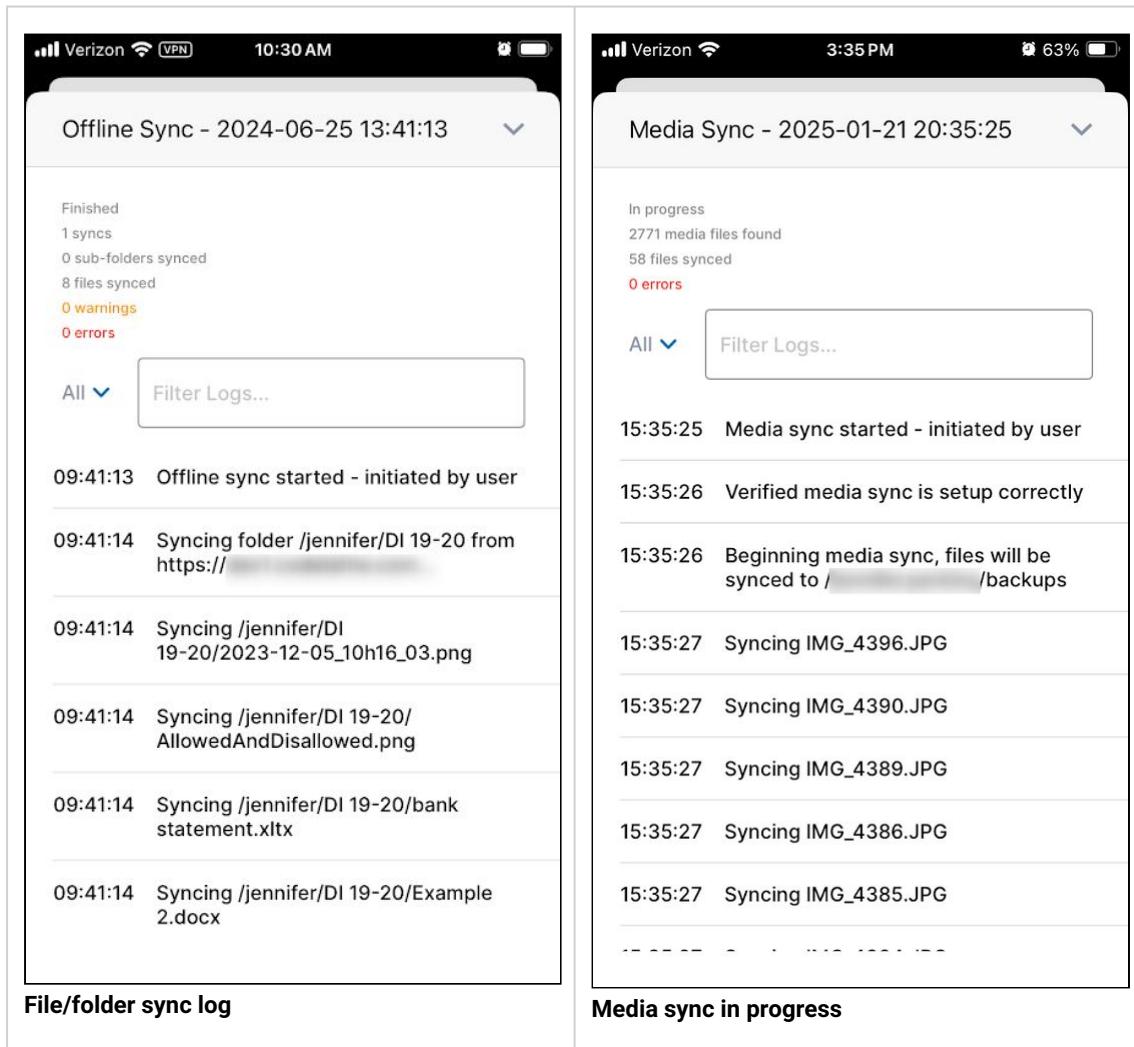

completed. The tab also shows the most recent completed or in progress media sync (see page 215).

The screenshot shows the FileCloud mobile application interface. At the top, there are status icons for signal strength, battery level (63%), and time (3:35 PM). The main navigation bar includes a menu icon, the FILECLOUD logo, and a search icon. Below the navigation is a breadcrumb trail: Home > My Files > backups. The 'backups' folder is selected, indicated by a blue folder icon. A toolbar below the folder name includes a checkbox for 'Name ▲', a 'Filter items...' search bar, and a grid icon. The main content area displays a list of items under the heading 'File Operations 1/1'. This list is divided into two sections: 'Transfers (1)' and 'Syncs (2)'. The 'Syncs (2)' section is highlighted with an orange border. It contains two entries: 'Media Sync' (status: 'In progress') and 'Offline Sync' (status: 'Finished'). Each sync entry has an orange arrow pointing to the right, indicating where to click for more details.

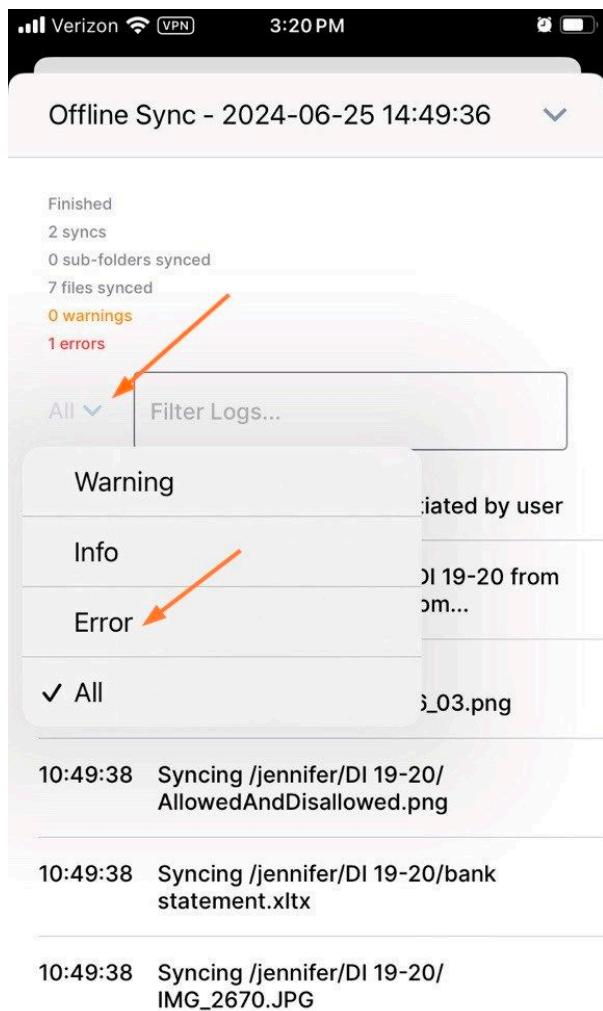

Transfers (1)	Syncs (2)
Media Sync	Media Sync - 2025-01-21 20:35:25 In progress
Offline Sync	Offline Sync - 2025-01-21 12:21:47 Finished

2. To view detailed information or logs of a sync, click the arrow next to the listing.

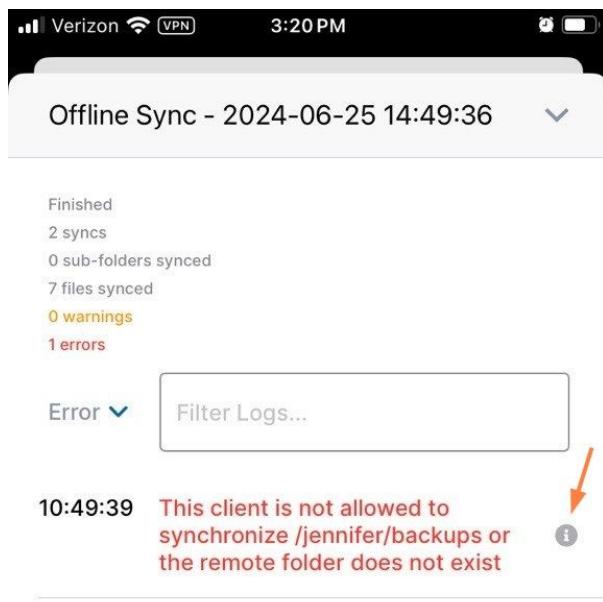

To filter sync logs

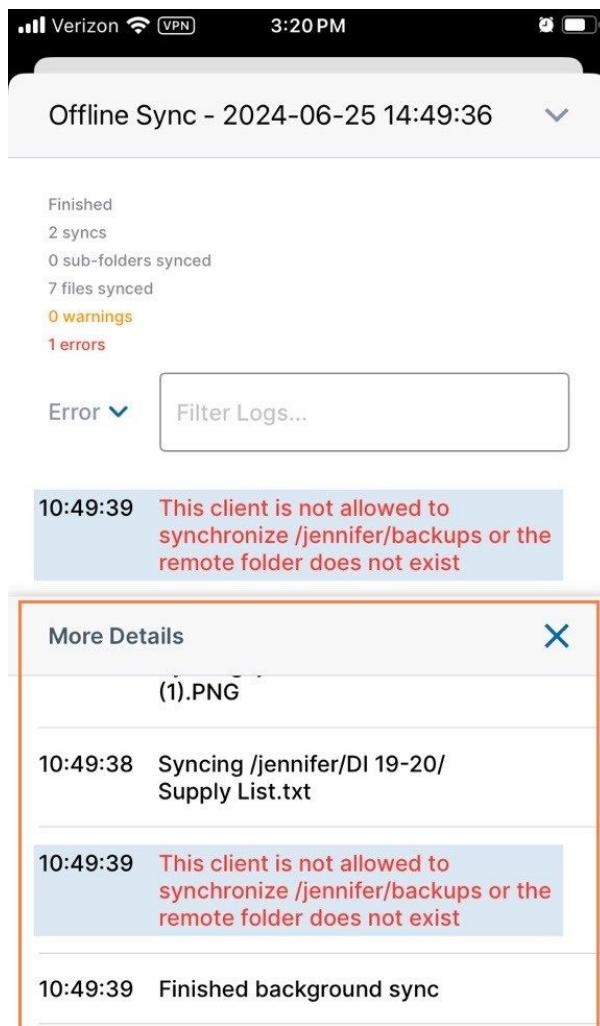

You can filter sync logs by tapping the drop-down arrow next to the **Filter Logs** field and choosing an option.

For example, if you want to see a list of sync errors, you can choose **Error** to view them all together. To view a particular error in context of the log, tap the info icon next to it.

A **More Details** box shows you the error as it appears within the log, so you can see its context.

For more information about sync operations, see [iOS File Sync \(see page 248\)](#).

iOS File Sync

Automatic synchronization of files and folders between your iOS device and the FileCloud server is available in the FileCloud iOS App version 4.9 and later.

You can choose to synchronize FileCloud folders and their contents with your iOS device:

- Download files on your device to access them while offline
- Update your local version of a file when the remote version has changed
- Add new local files that will be uploaded remotely when connectivity is available

When you activate this option you can choose between:

Mode	Description
Two Way Sync	This option will download changes from server as well as upload changes from the device back to the server
Download Only	This option will ignore any changes made to local downloaded files and will download changes from the server only

In order to synchronize a file, the following requirements must be met:

- Syncing My Files - Your admin must enable Sync.
- Syncing Team Folders - Your admin must enable Sync and give you sync permission on the specific team folder.
- Syncing Network Shares - Your admin must enable Sync and enable syncing of network folders (in FileCloud storage settings), and give you Sync permission for the specific Network Share.

Locally renaming the root sync folder is detected as a deletion of that folder during two-way syncing, so the renamed root folder will be remotely deleted on the server and no further sync will happen from there on.

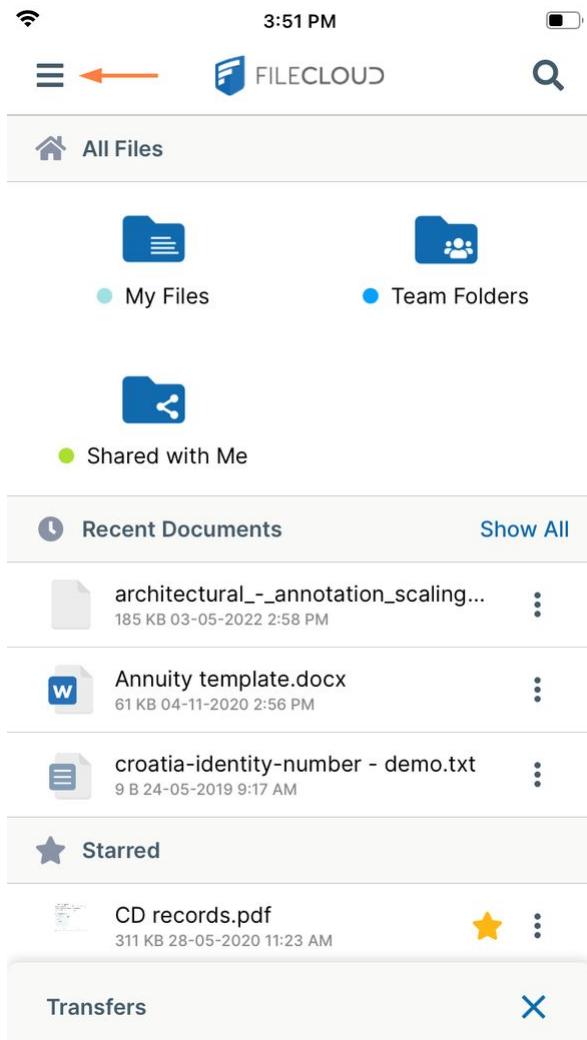

This limitation only happens when renaming the root folder, and not when renaming its child items.

View Offline Sync settings

Settings that configure FileCloud sync can be viewed and managed from the Settings screen. The **Files and folders** setting is enabled by default; if you disable it, files and folders that you individually configure for automatic syncing will not sync automatically.

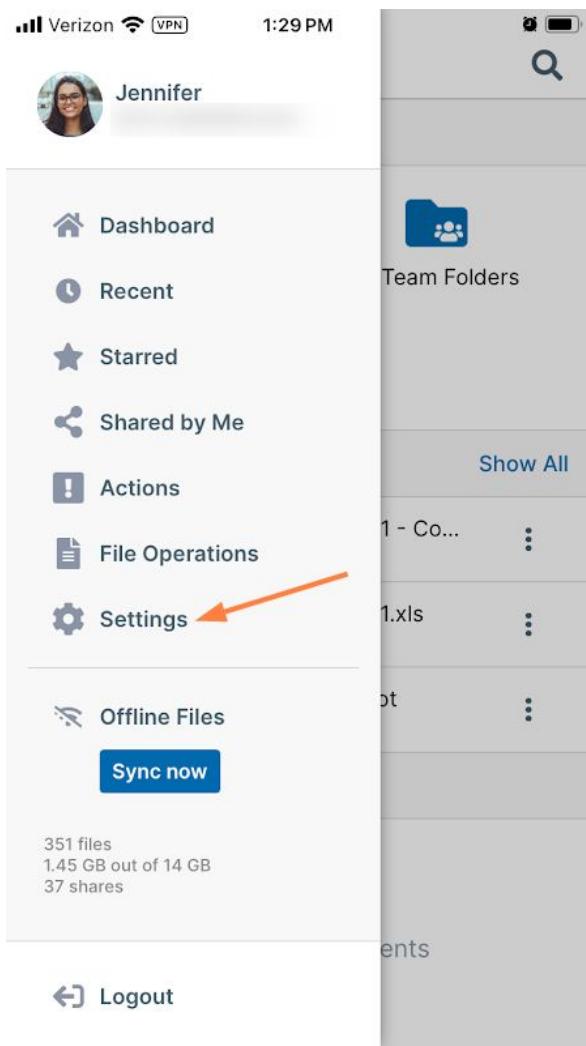

To access sync settings:

1. Open the FileCloud iOS app.
2. Tap the menu icon in the upper left of the screen.

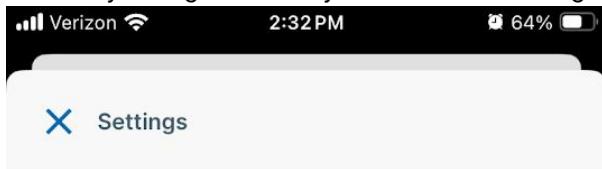

A navigation pane opens.

3. Tap **Settings**.

4. Make any changes to the Synchronization settings.

Security

Enable passcode

Enable app integrations
Access your files from other apps

Media Sync

Enable media sync
Automatically upload media files from the device to your server

Backups Destination
/jennifer.perkins/backups

Offline Sync

Automatic sync
Offline files will be updated automatically

Data Usage

Transfer files only over WiFi
Synchronization will happen not when connected to cellular data

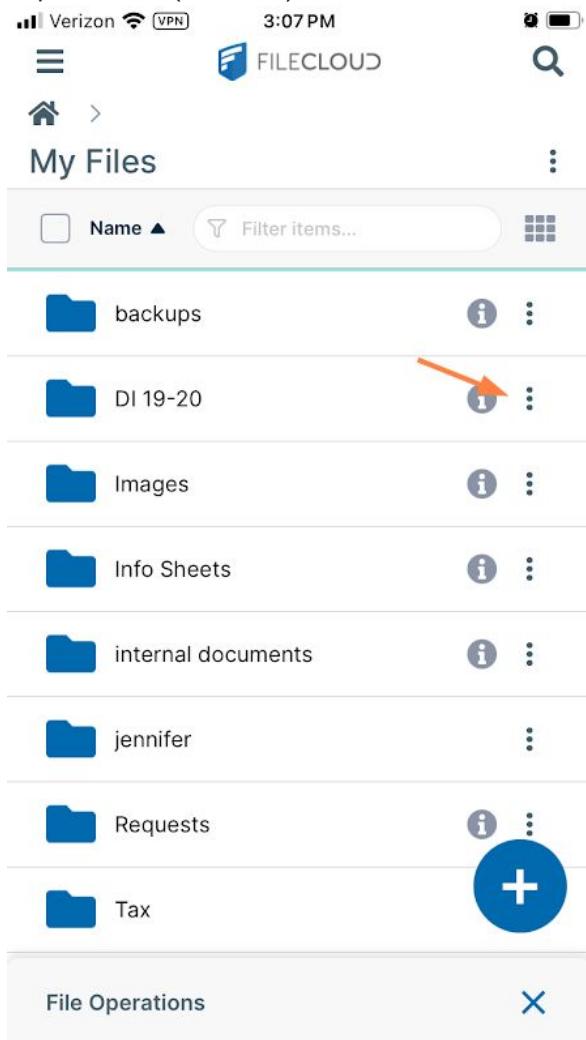

Setting	Description
Automatic Sync	Enabled by default. Turns on automatic syncing for files and folders that are enabled for syncing. If this is disabled, even files and folders enabled for syncing are not synced automatically.
Data Usage	Disabled by default, so that synchronization only occurs when your device is connected to wifi. When enabled, synchronization occurs over wifi or cellular data.

Enable automatic sync for a folder

All files in the folder and its sub folders are marked for sync. Empty folders are not synced.

To enable automatic sync:

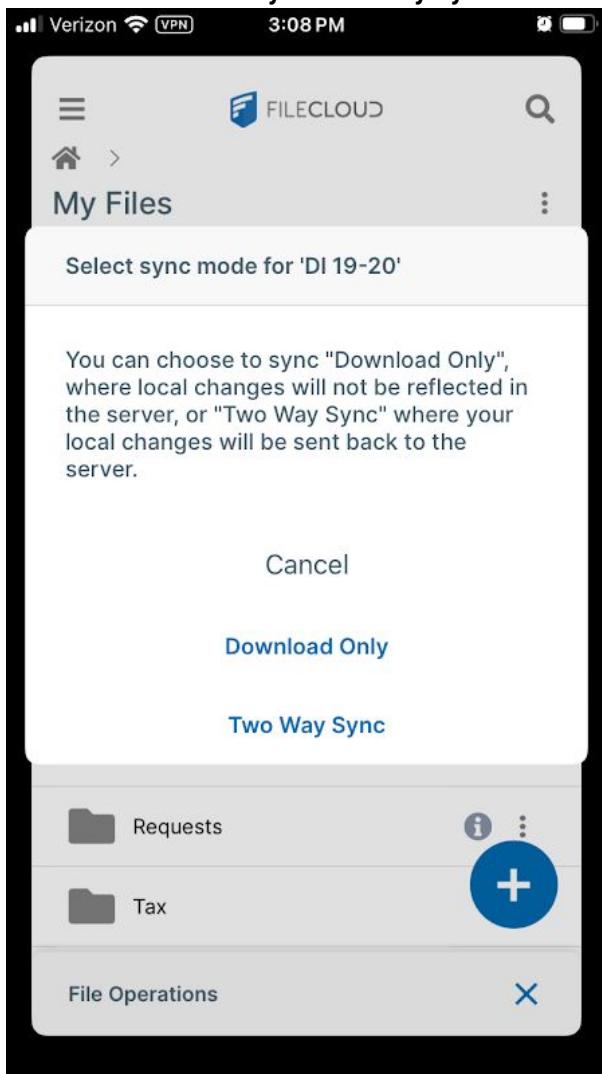

1. Open the FileCloud iOS app.
2. Navigate to the folder you want to automatically sync when changes are made to its contents.
3. Tap the more (three dot) icon next to the file or folder.

File options appear.

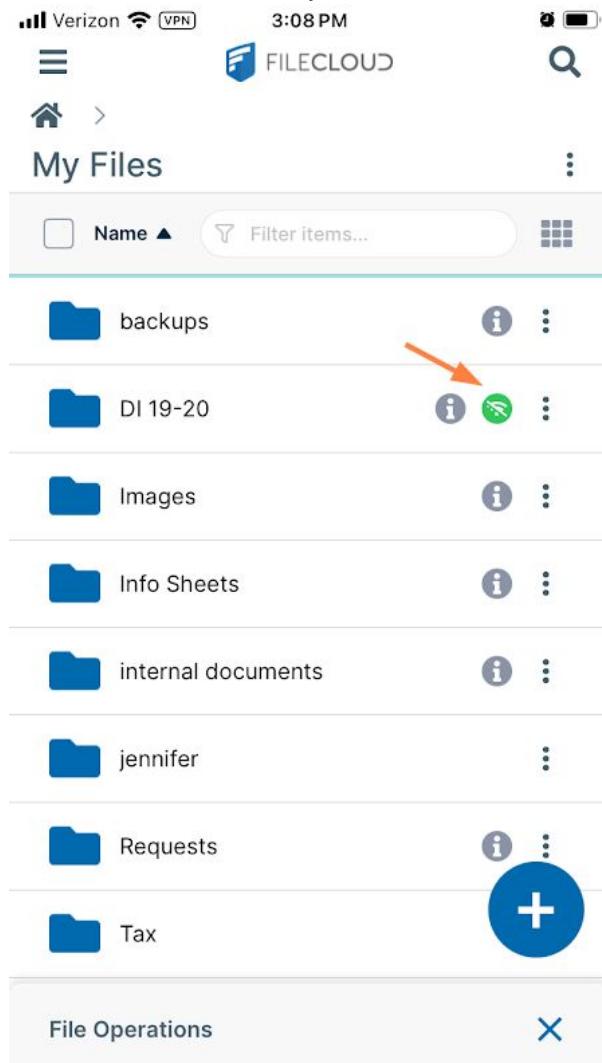

4. Tap **Available Offline**.

A Select sync mode dialog box opens.

5. Choose **Download Only** or **Two Way Sync**.

Now this folder and its contents are automatically synced either as a one-way download or in

both directions based on your selection, and an Available Offline icon appears next to the folder:

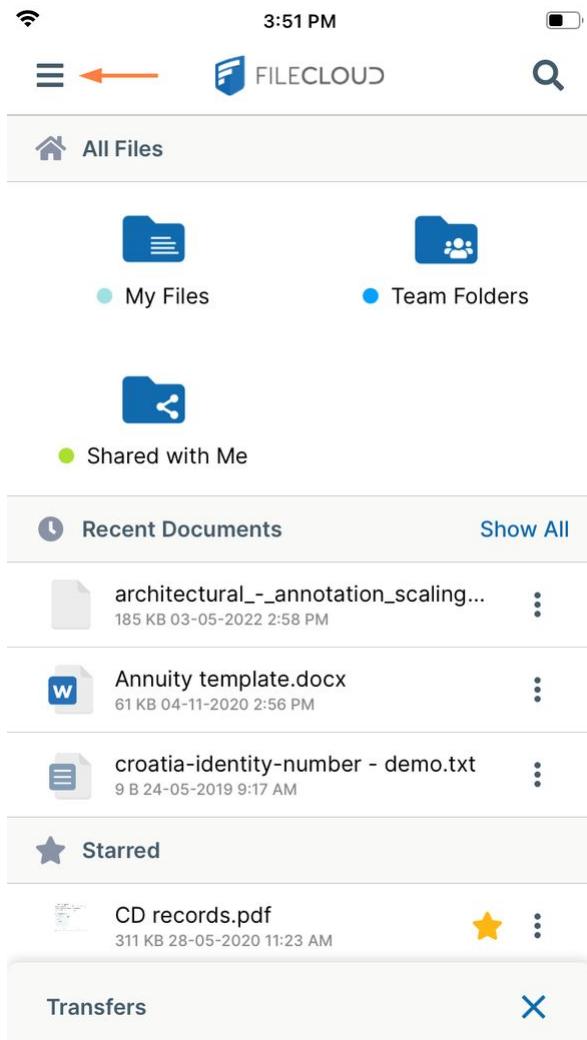

Manual syncing

When the synchronization setting **Files and Folders** is enabled in the FileCloud app settings and specific files and folders are configured for automatic syncing, sync will occur automatically at intervals. However, you can initiate syncing of configured files and folders at any time by tapping **Sync now**.

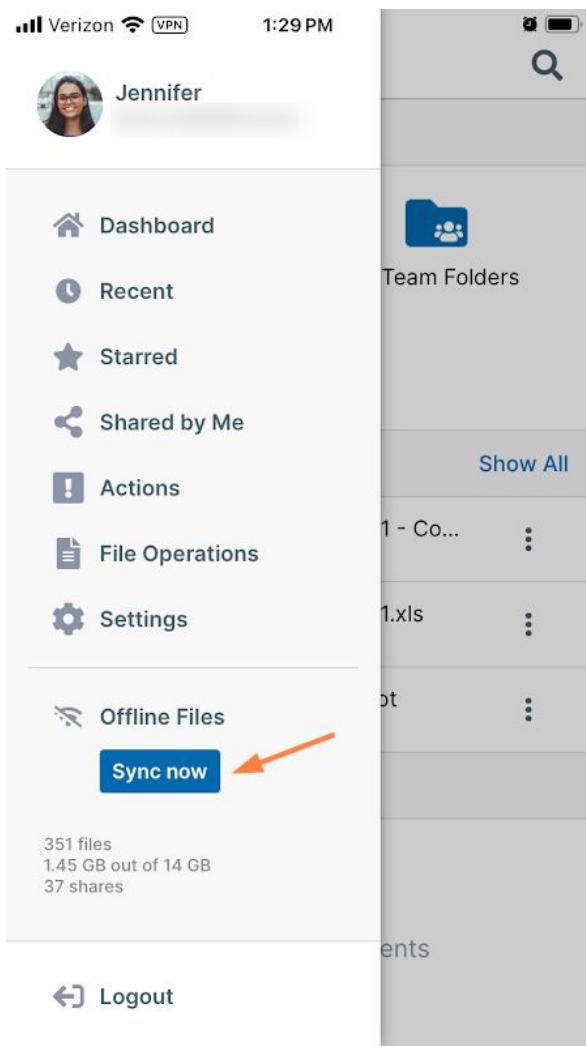

To initiate a sync manually:

1. Open the FileCloud iOS app.
2. Tap the menu icon in the upper left of the screen.

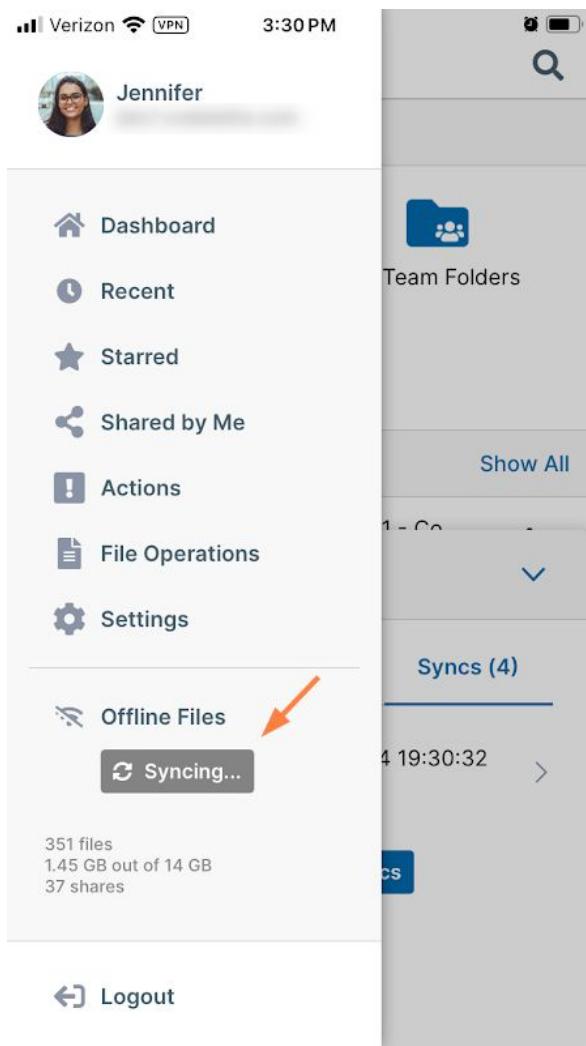

A navigation pane opens.

3. Tap **Sync now**.

The Sync button now displays **Syncing** and rotating arrows to indicate that synchronization is taking place for all sync-enabled files and folders.

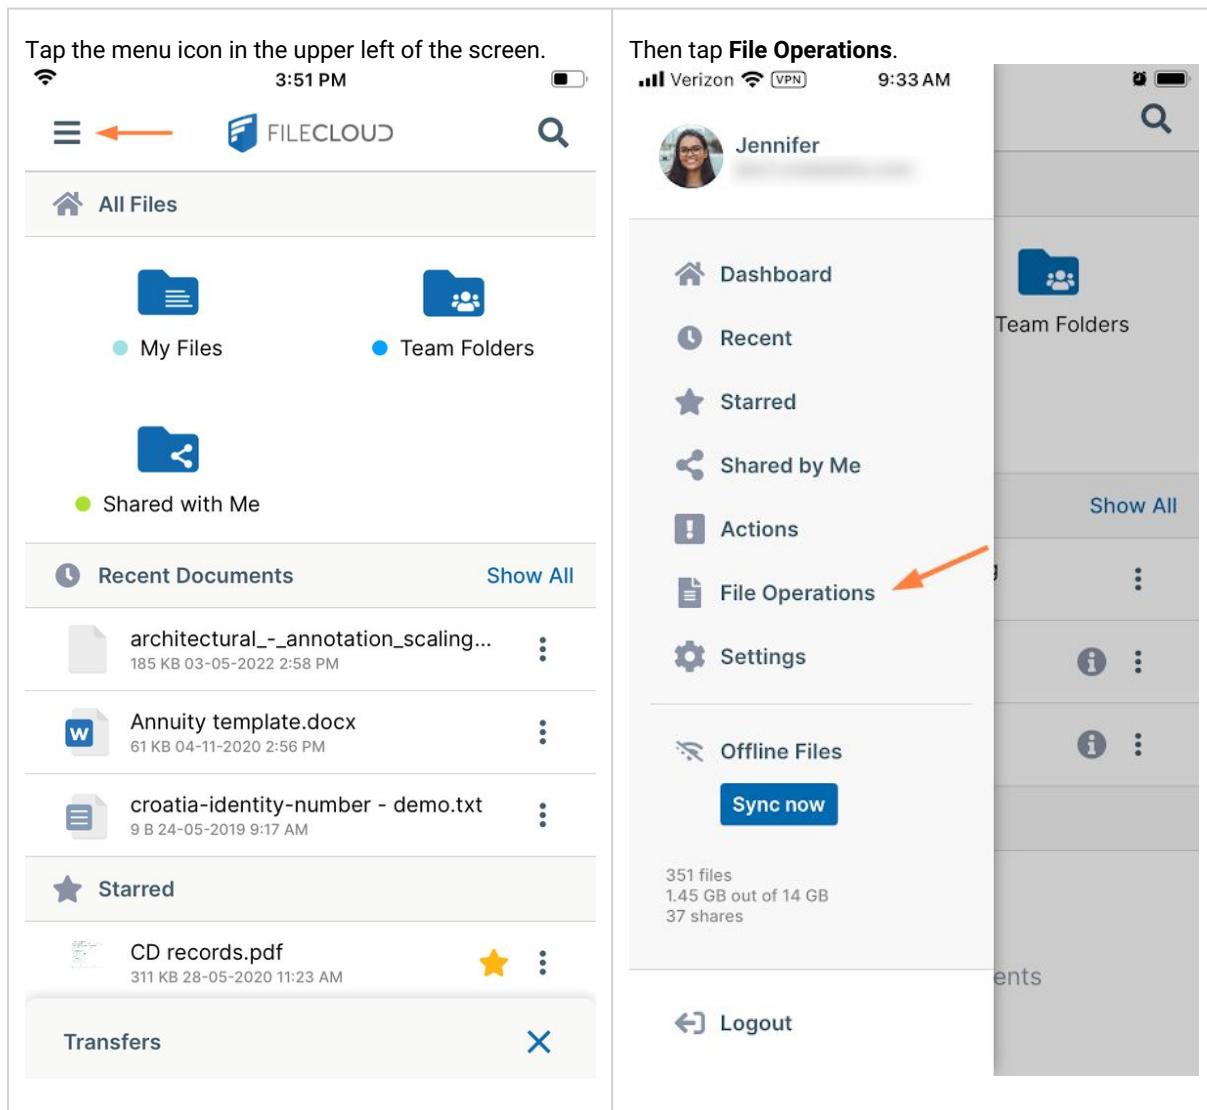

View sync results

You can see the results of your recent offline sync operations in the **File Operations** window.

To access the **File Operations** window:

If you perform a manual sync by tapping **Sync Now**, the **File Operations** window automatically opens when the sync begins.

If you want to check results of previous syncs, either automatic or manual, tap the menu icon in the upper left of the screen, and in the navigation pane, tap **File Operations**.

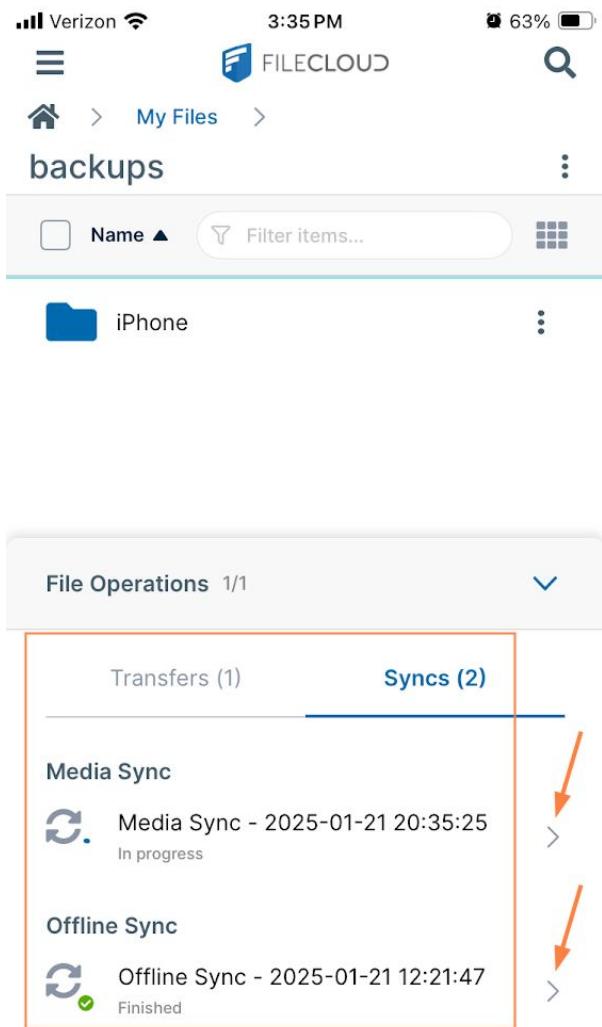

The File Operations window opens at the bottom of the screen.

To view the results of Sync operations:

1. Select the **Syncs** tab if it is not already selected.

The **Syncs** tab lists the most recent offline sync operation, either in progress or recently completed. The tab also shows the most recent completed or in progress media sync (see page 215).

2. To view detailed information or logs of a sync, click the arrow next to the listing

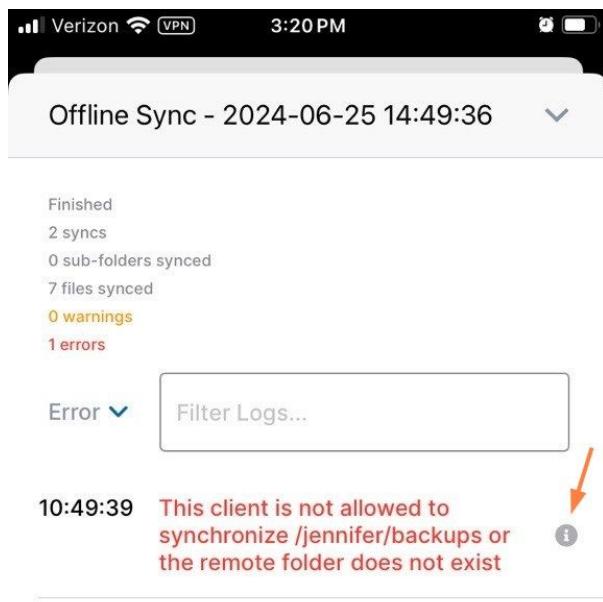

To filter sync logs

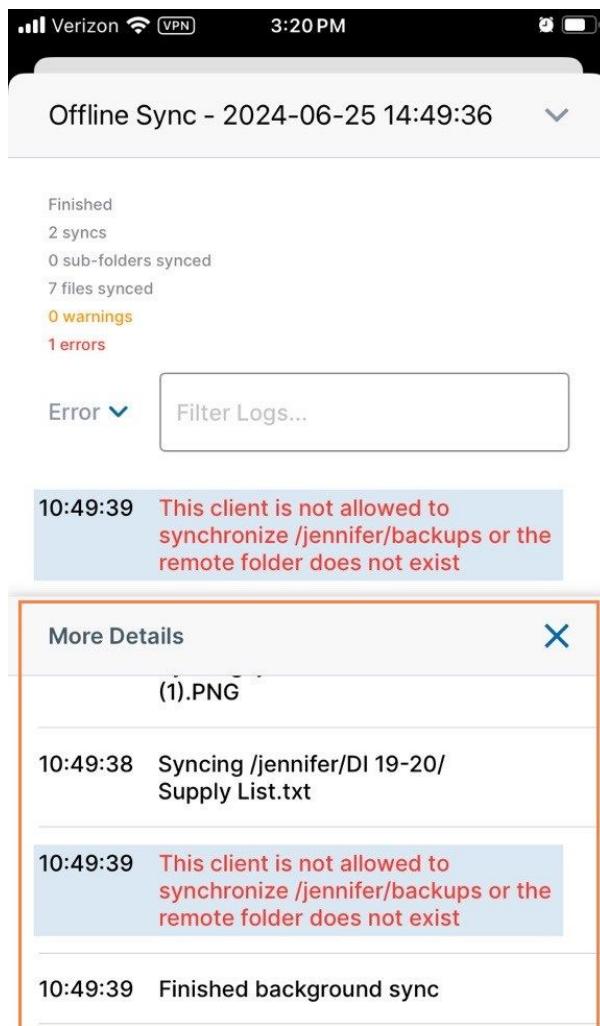

You can filter sync logs by tapping the drop-down arrow next to the **Filter Logs** field and choosing an option.

For example, if you want to see a list of sync errors, you can choose **Error** to view them all together. To view a particular error in context of the log, tap the info icon next to it.

A **More Details** box shows you the error as it appears within the log, so you can see its context.

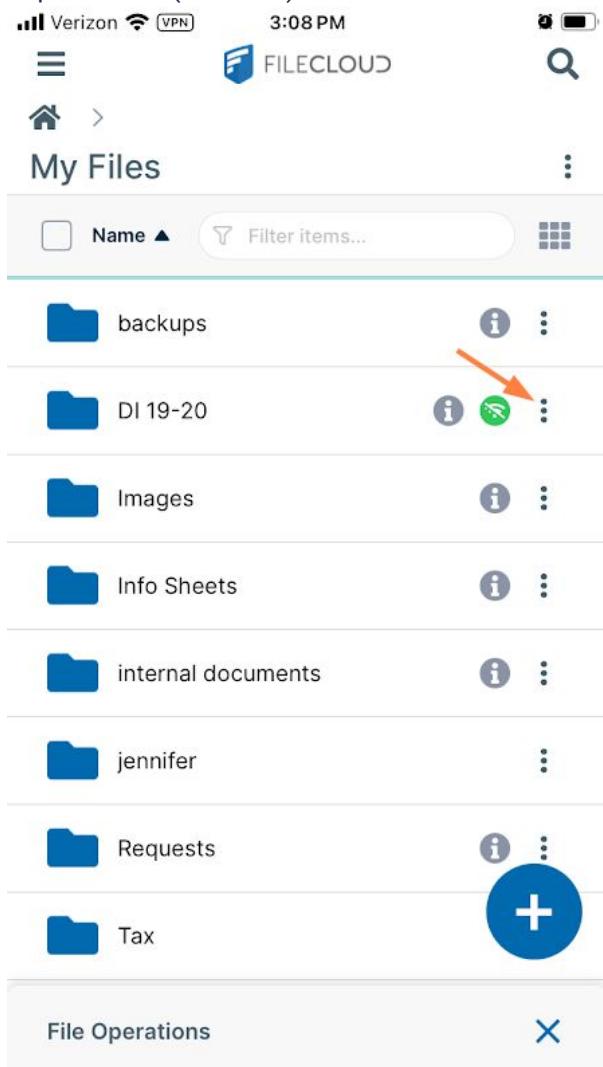

Disable offline sync for a folder

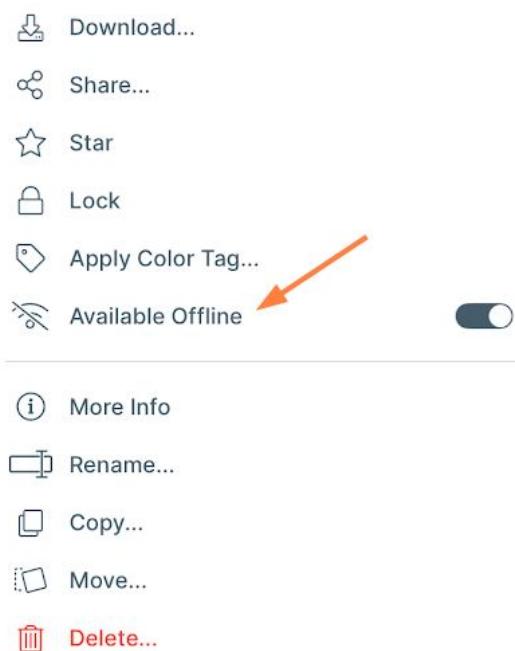

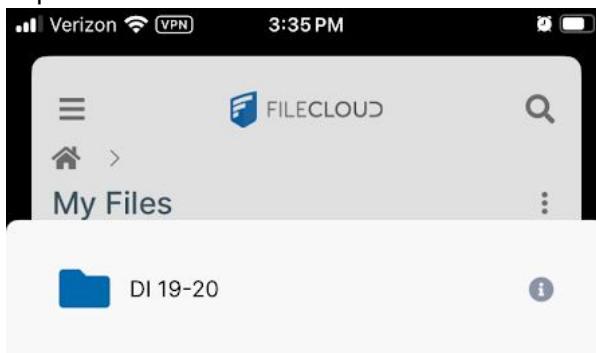

To disable automatic sync:

1. Open the FileCloud iOS app.
2. Navigate to the folder you no longer want to sync automatically.

3. Tap the more (three dot) icon next to the file or folder.

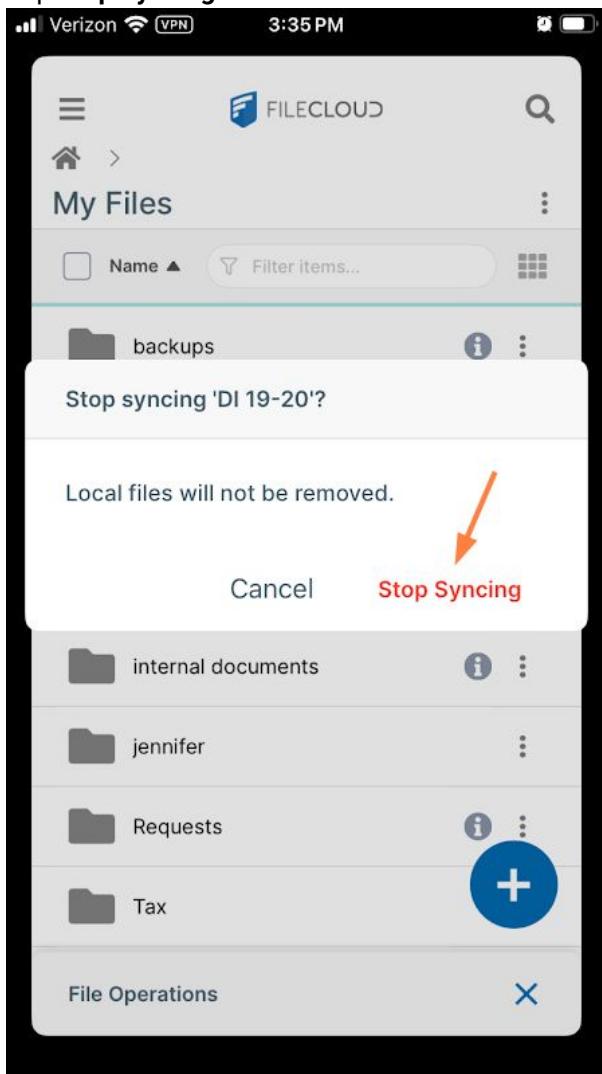

4. Tap Available offline.

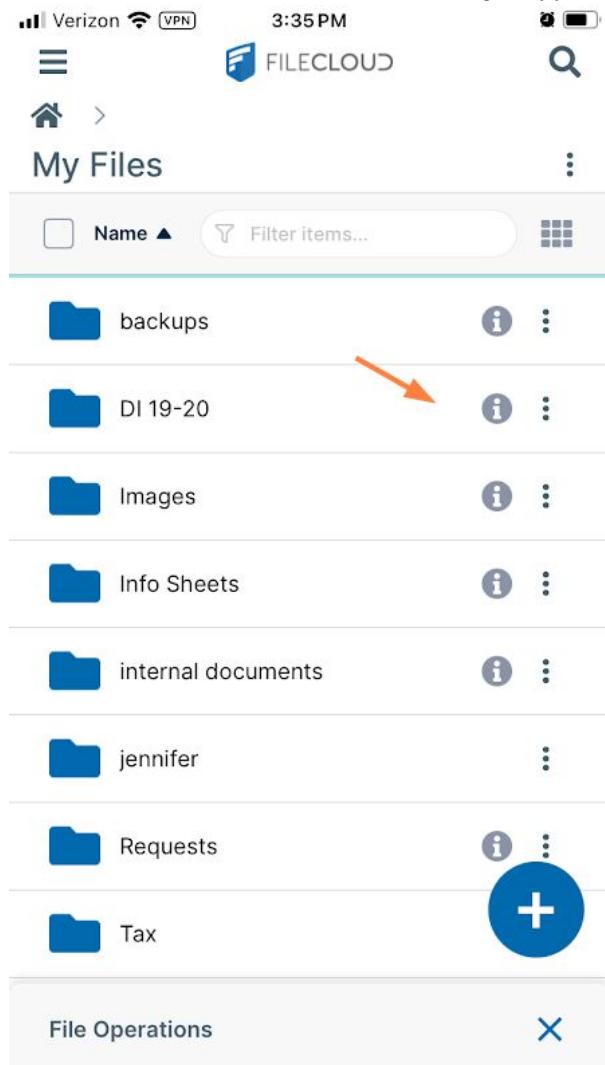

You are prompted with the message "**Stop syncing <filename>?**"

5. Tap **Stop Syncing**.

Automatic syncing no longer occurs, but your previously synced local files remain on your

device. The Available Offline icon no longer appears next to the folder:

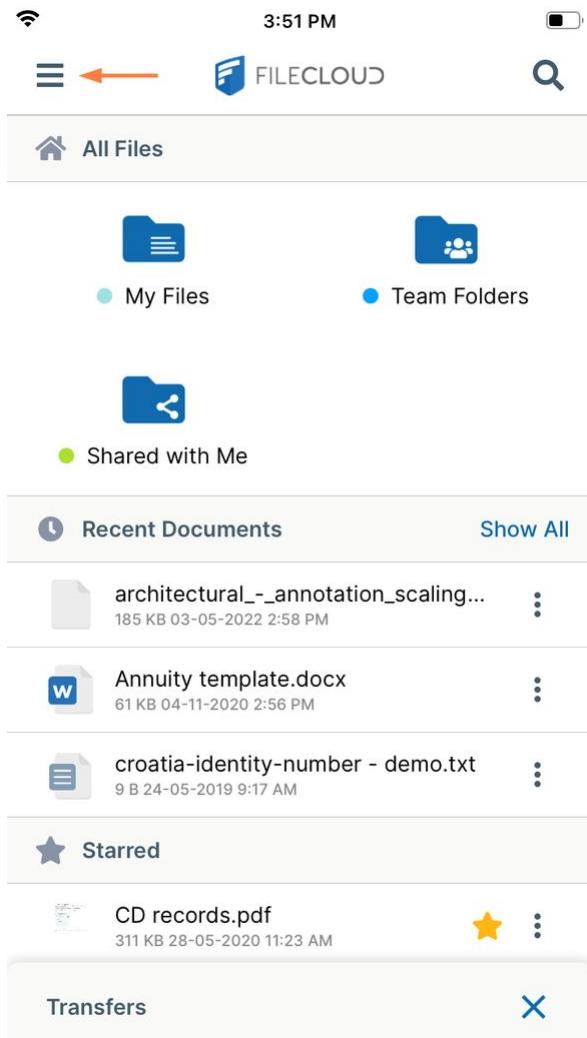

Get Offline Sync Logs

Log files are saved in your **Offline Files** folder.

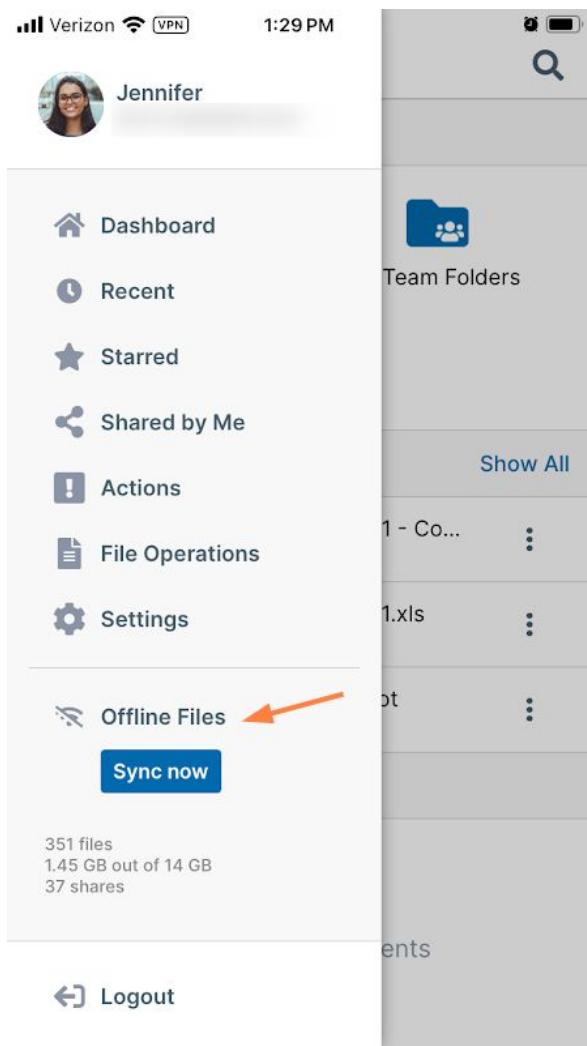

To get Offline Sync logs:

1. Open the FileCloud iOS app.
2. Tap the menu icon in the upper left of the screen.

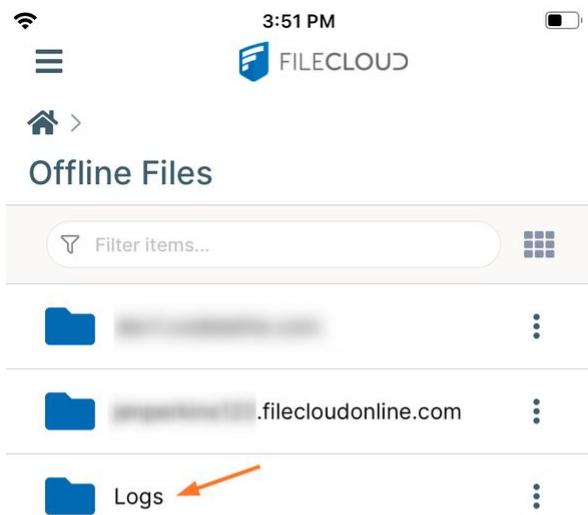

A navigation pane opens.

3. Tap **Offline files**.

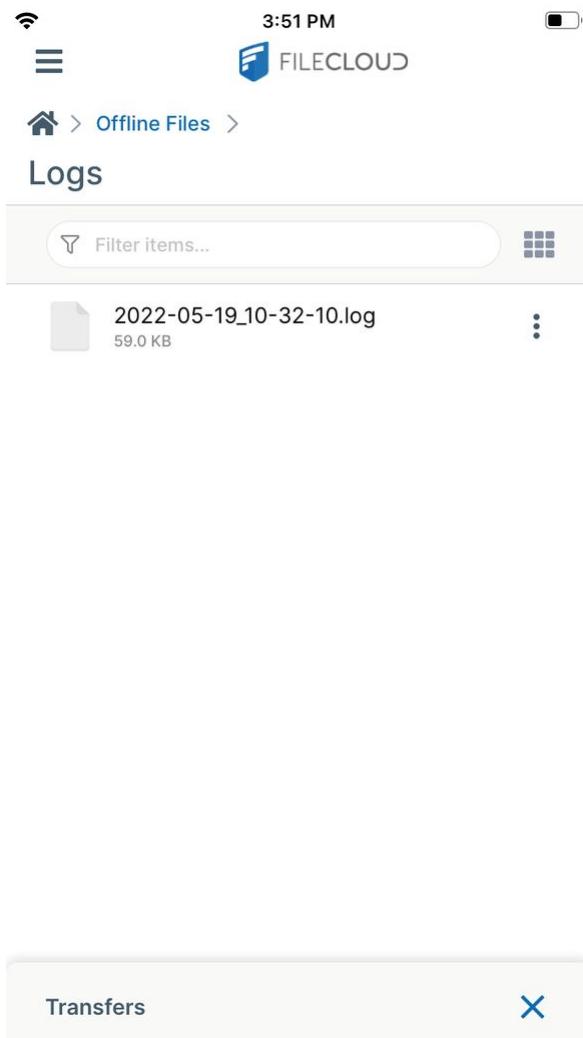

Your **Offline Files** folder opens.

4. Tap the **Logs** sub-folder to access your offline log files.

Transfers X

5. View or download any of the log files.

iPad Multi-Tasking

On iPads you can use the FileCloud in Slide Over mode or Side by Side with other apps.

→ To learn more, read Apple's documentation on how to [Use Multitasking on your iPad](#)⁵.

Drag and Drop Support

You can drag and drop files to and from FileCloud for advanced multitasking workflows.

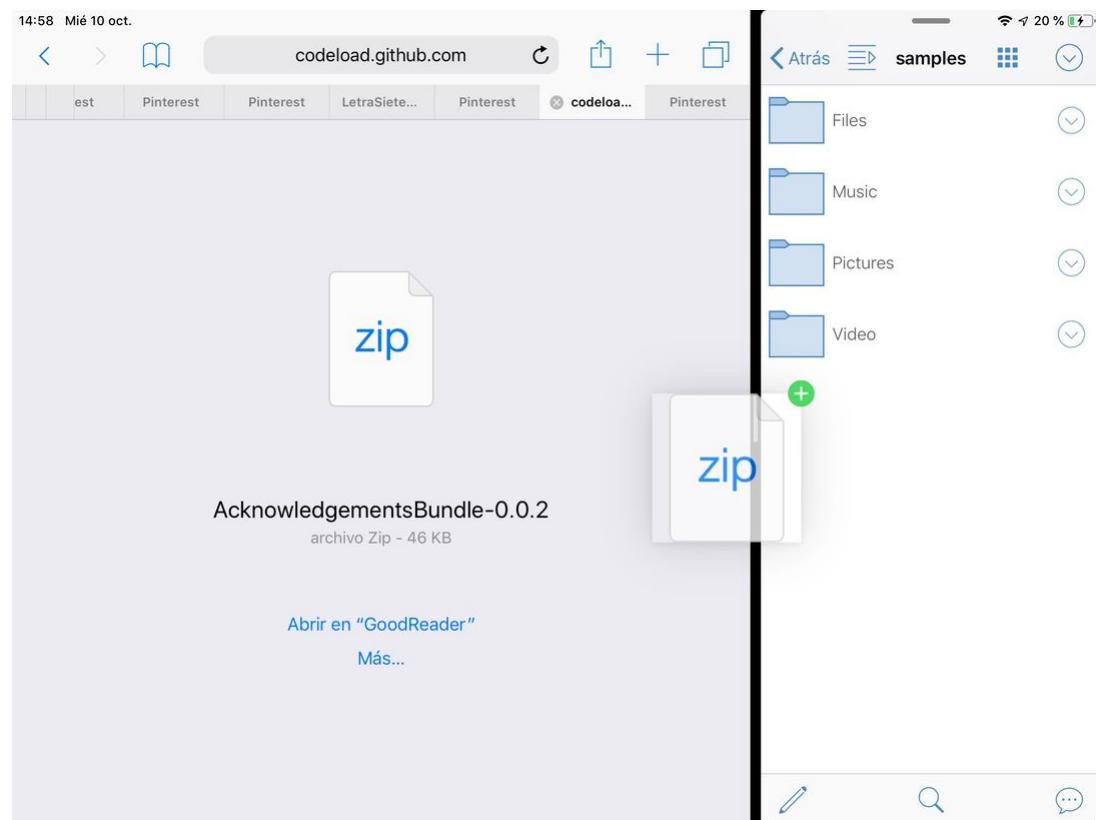

You can only drag one item at a time.
Drag support varies from one app to another.

5. <https://support.apple.com/en-us/HT207582>

Dragging Content From Other Apps

When multitasking you can drag images and files to the FileCloud to upload them to the currently viewed folder.

Test app elements to discover draggable items and see how they get uploaded to TestFlight.

Dragging FileCloud Files to Other Apps

When multitasking you can drag images and files to your FileCloud site to upload them to the currently viewed folder.

💡 It is recommended that you test app elements to discover where FileCloud files can be dropped, as drag support varies from one app to another.

FileCloud iOS Integration with 3rd Party Apps

You can interact with your FileCloud site using 3rd party applications in several ways.

Integration with other apps will only work if:

- You enable App Integrations from the Global Settings
- App Integrations is enabled by default

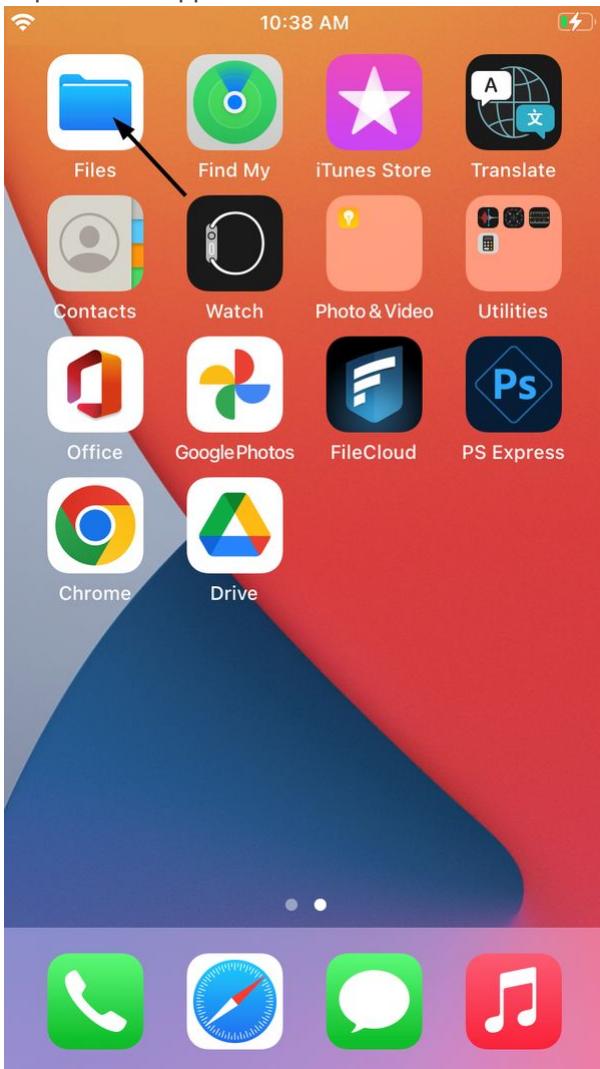

Accessing FileCloud Files through the Files app

To access FileCloud files and folders through the Files app:

On iOS 11 and newer you can natively browse your FileCloud contents, preview files, and even launch in-place editing, all without directly opening the FileCloud app through the Files app.

 You must enable the FileCloud service from the Files app the first time you use it.

1. Tap the **Files** app.

The **Browse** screen opens.

2. Tap **FileCloud**.

Browse

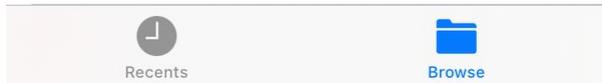

Locations

-  iCloud Drive

Me

Starred Team Folders

5 items

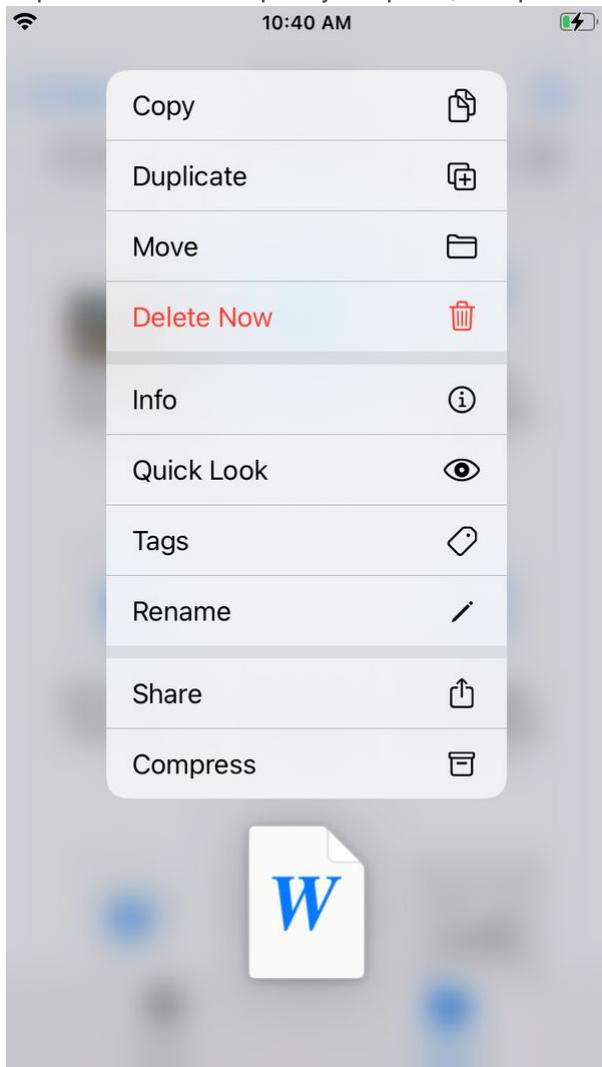

Read-Only

Recents

Browse

4. Navigate to a file or folder.

5. Tap the file or folder quickly to open it, or tap and hold to access a list of options:

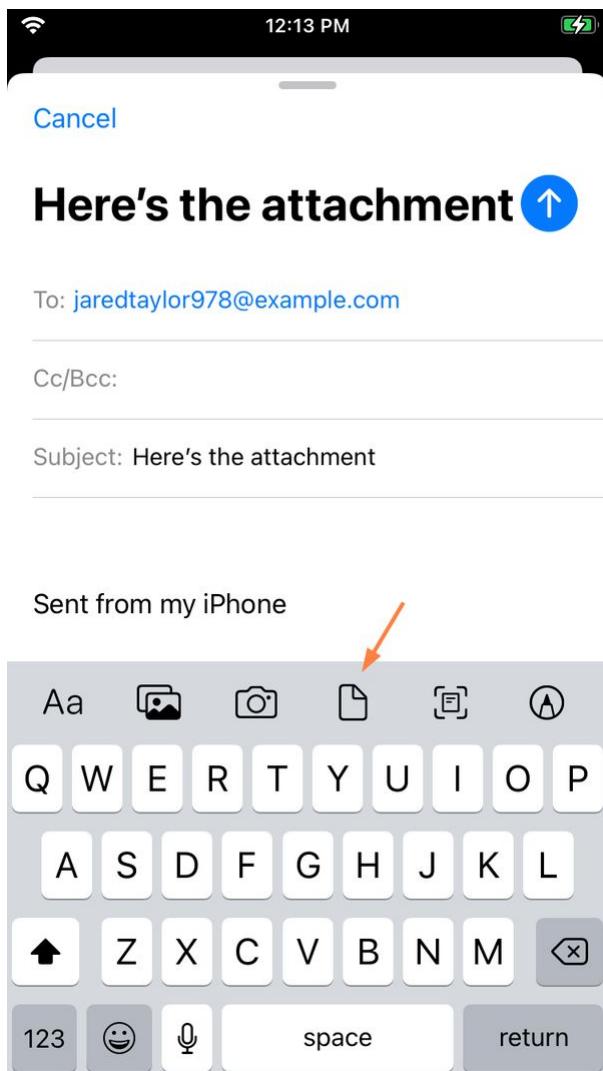

Attaching or uploading a FileCloud file into another application

To attach or upload a FileCloud file while working in another app:

On iOS, when you are working in another app, you can remain in that app to upload or attach a file stored in FileCloud.

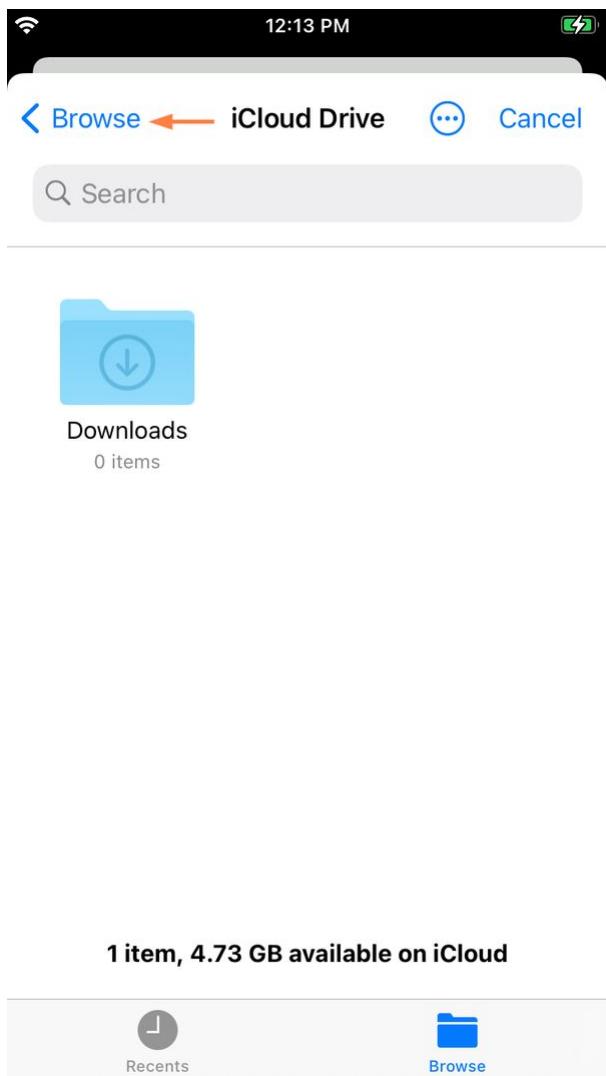

The following example uses **Mail** to demonstrate how to access FileCloud files from another app, however, you could use the same process in any app that allows you to upload or browse files external to it.

1. Open the Mail app.
2. Compose your message and tap the file icon.

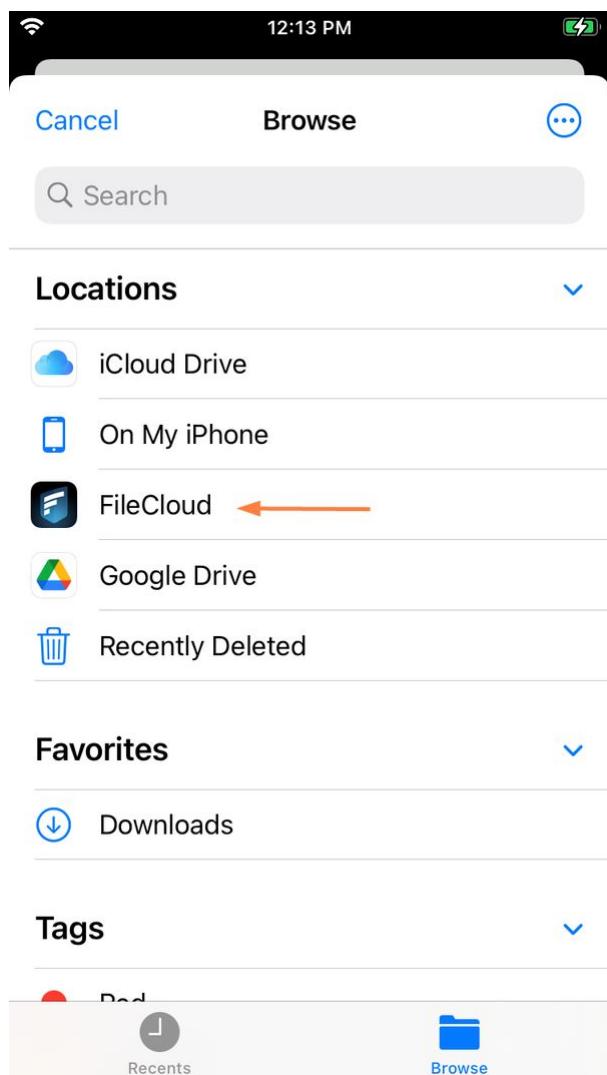

iOS opens the last location accessed, which may not be the FileCloud server.

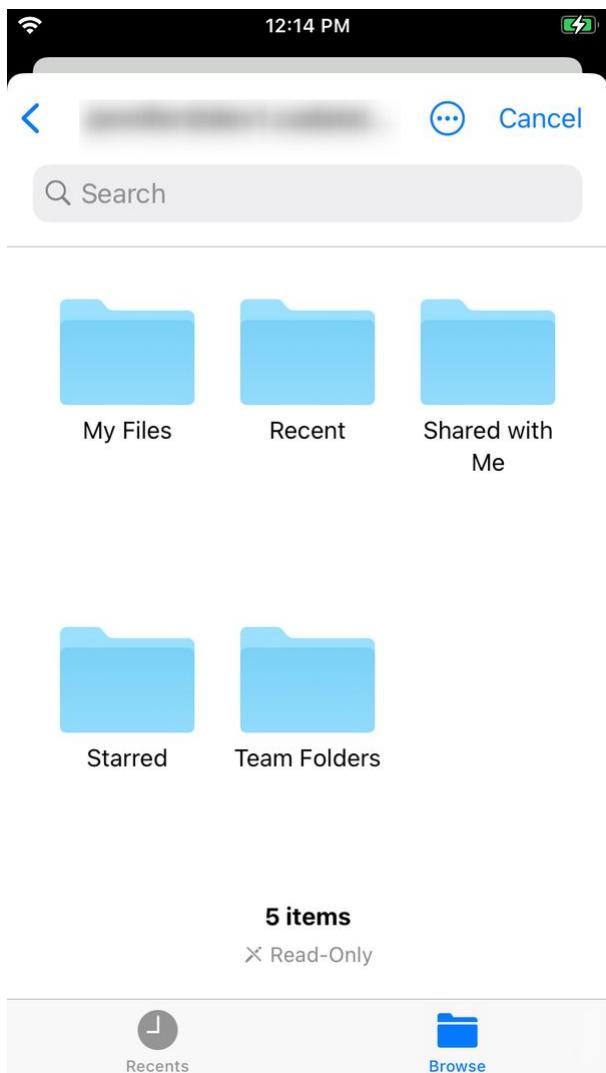

3. Tap the back arrow until you reach the locations screen.

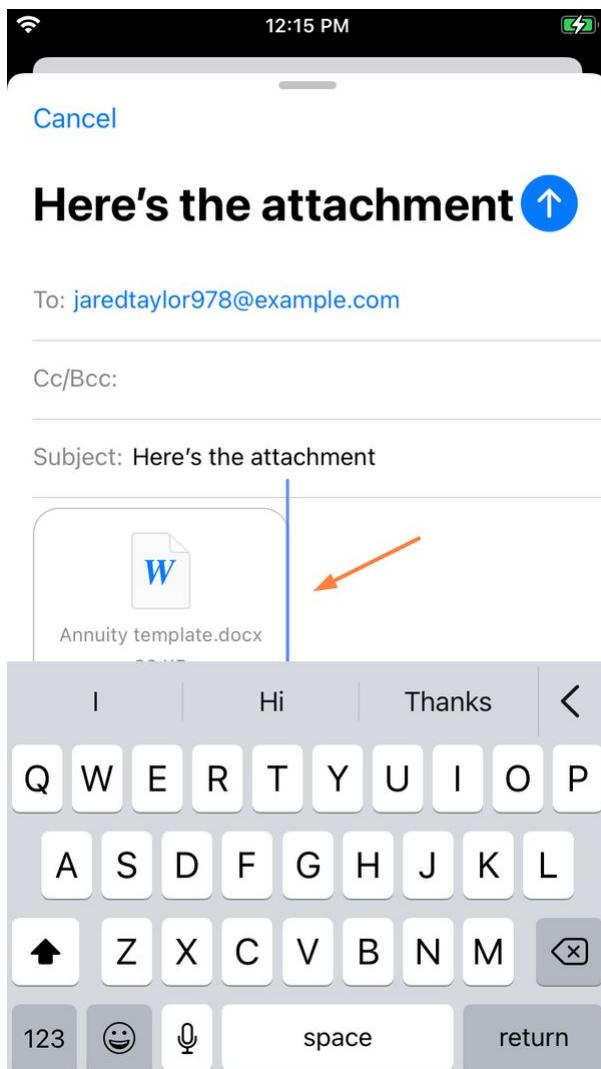

4. In the **Locations** screen, tap **FileCloud**.

Your FileCloud folders appear.

5. Navigate through the folders to the file you want to attach to the email, and tap it quickly. The file is attached to the email.

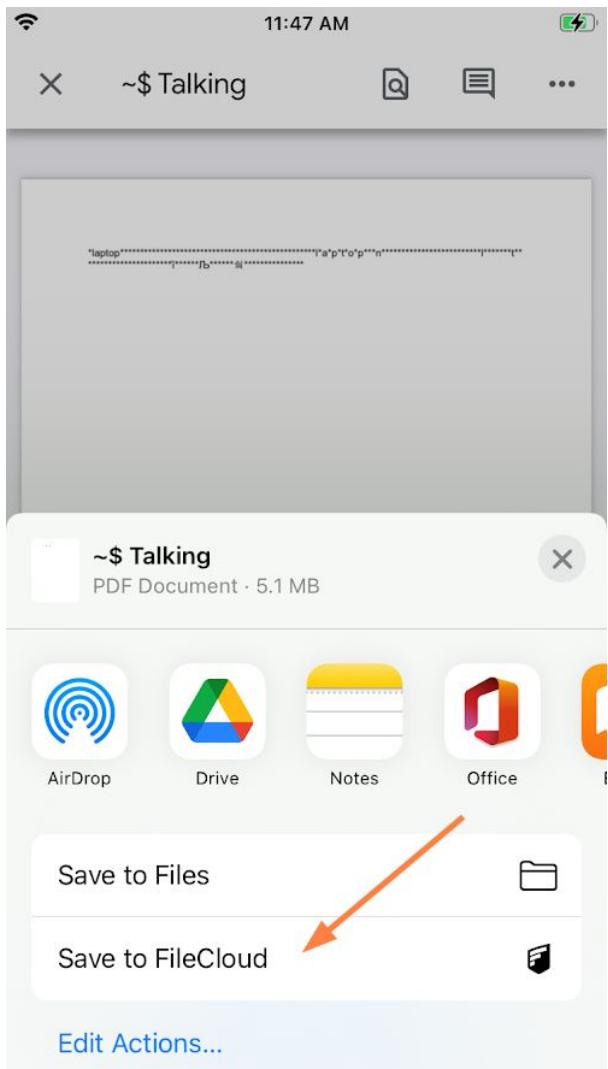

Saving directly from a 3rd party application

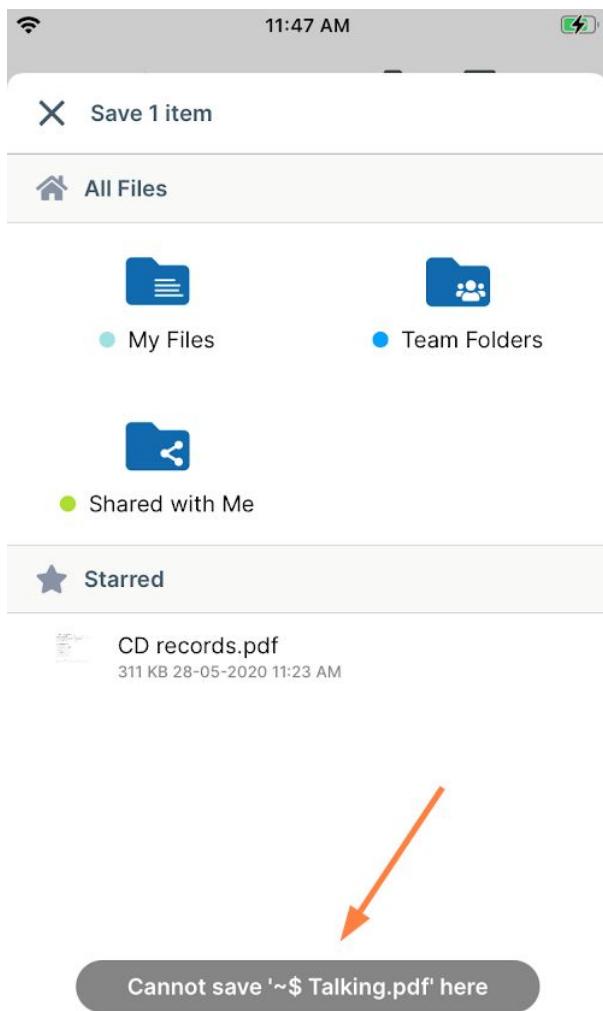

You can save a file to your FileCloud server directly from a 3rd party application in a few different ways:

To use Save to FileCloud

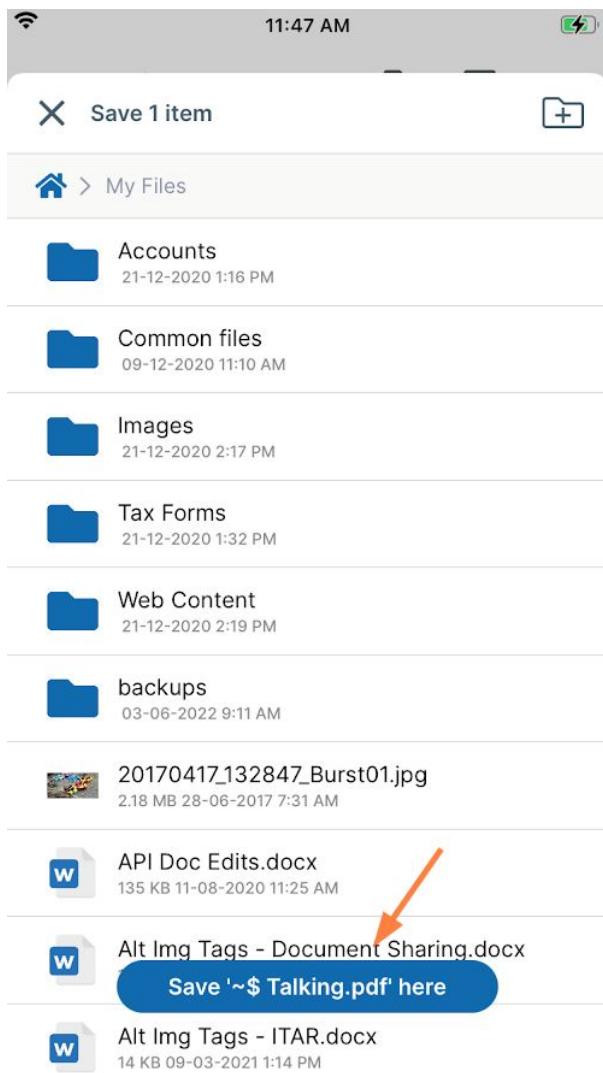

1. When using a share or open with option in a third party application, find and tap the **Save to FileCloud** option.

The FileCloud Dashboard opens with the message **Cannot save <file> here** because you have not opened a specific folder to save in.

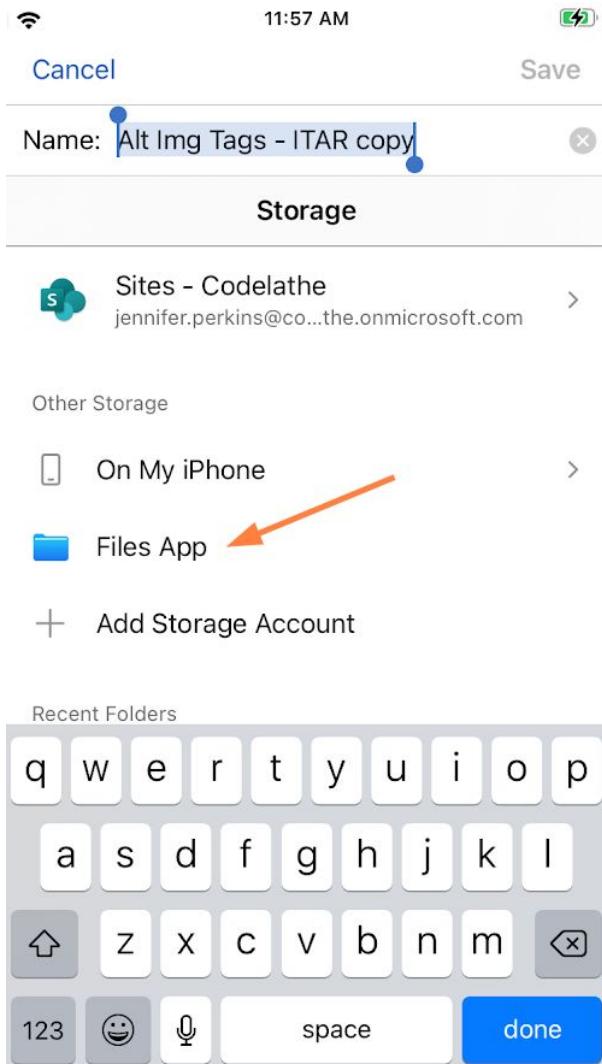

2. Navigate to the location where you would like to save the file, and tap the **Save <filename> here** button.

To Save to the FileCloud location in the Files app

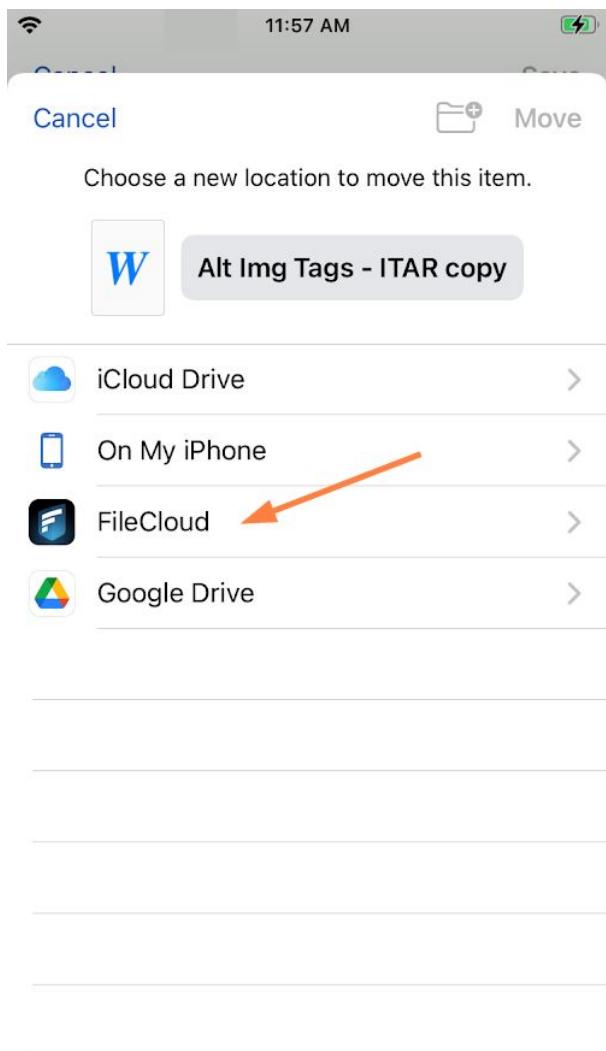

As FileCloud is natively integrated in the Files app, you can choose this option to send a file to your FileCloud server.

1. When you save the file in the third-party application, choose the **Files app** option.

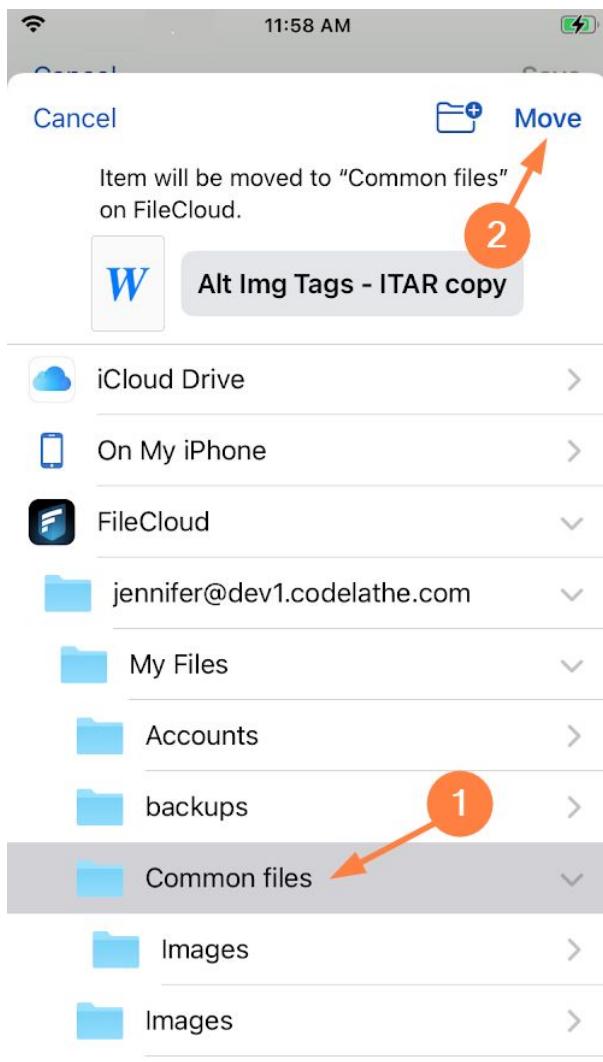

Your iPhone locations appear.

2. Tap the FileCloud location.

3. Navigate to the FileCloud folder where you would like to store the file, and tap **Move**.

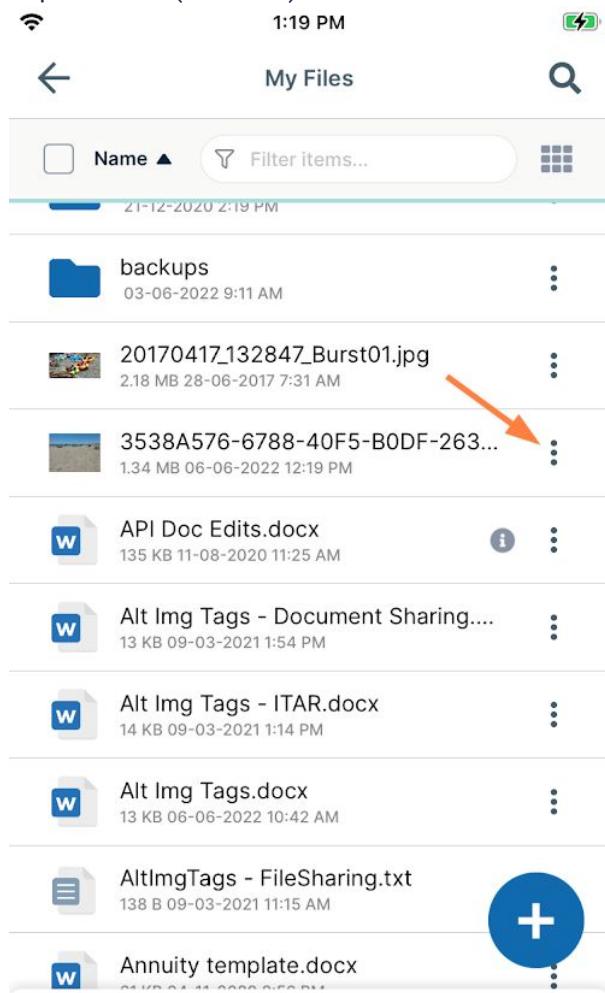

Opening a file from FileCloud with another application

To open a FileCloud file in another application:

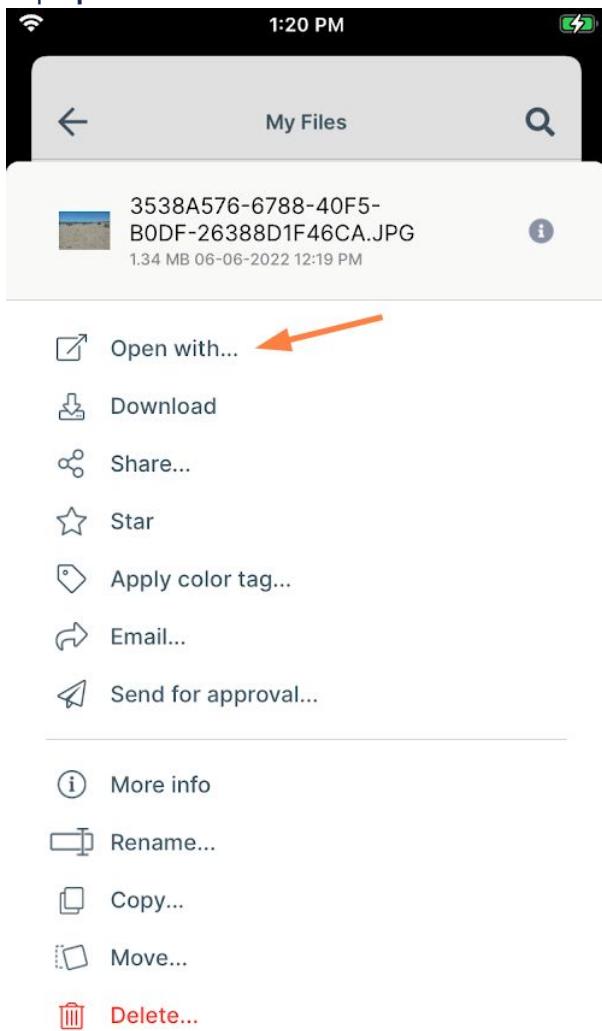

1. Open the FileCloud App.
2. Navigate to the file you want to open.

3. Tap the more (three dot) icon next to the file.

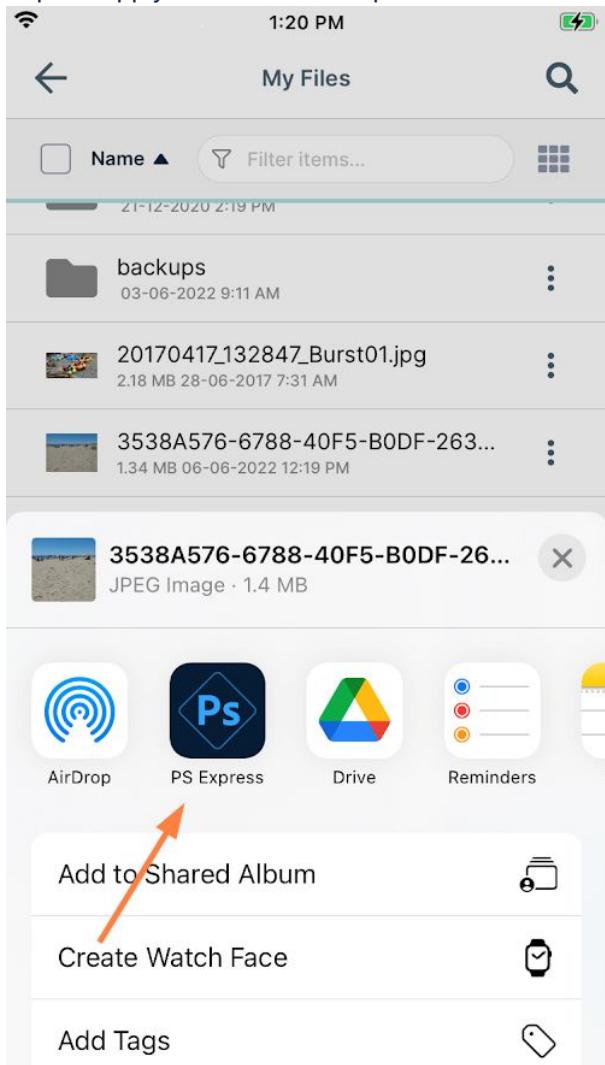

A list of options opens:

4. Tap **Open with...**.

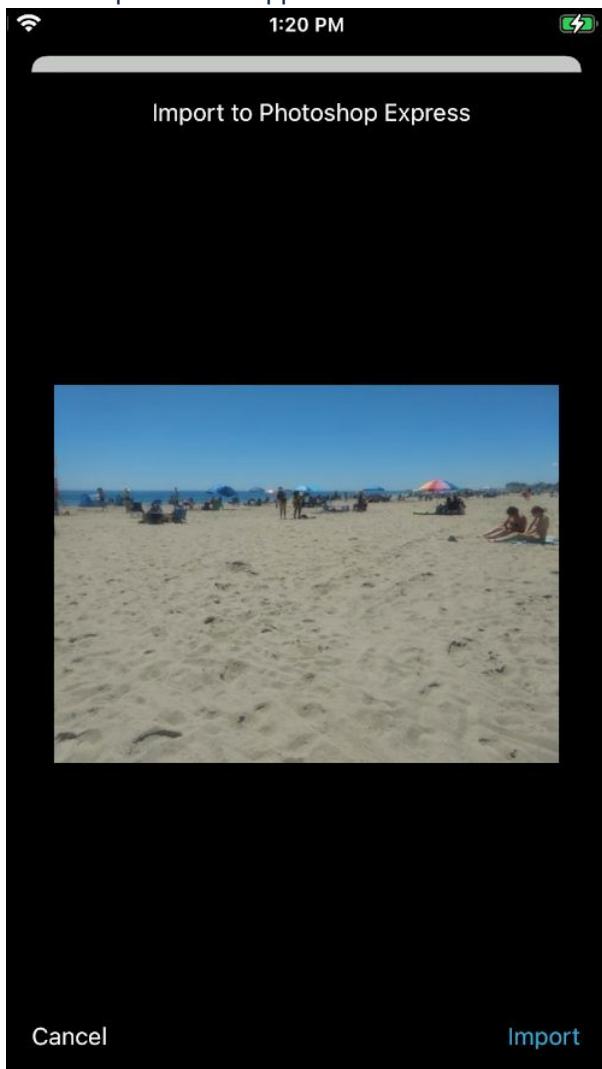

Various apps are shown as suggestions for opening the file.

5. Tap the app you would like to open the file with.

The file opens in the app.

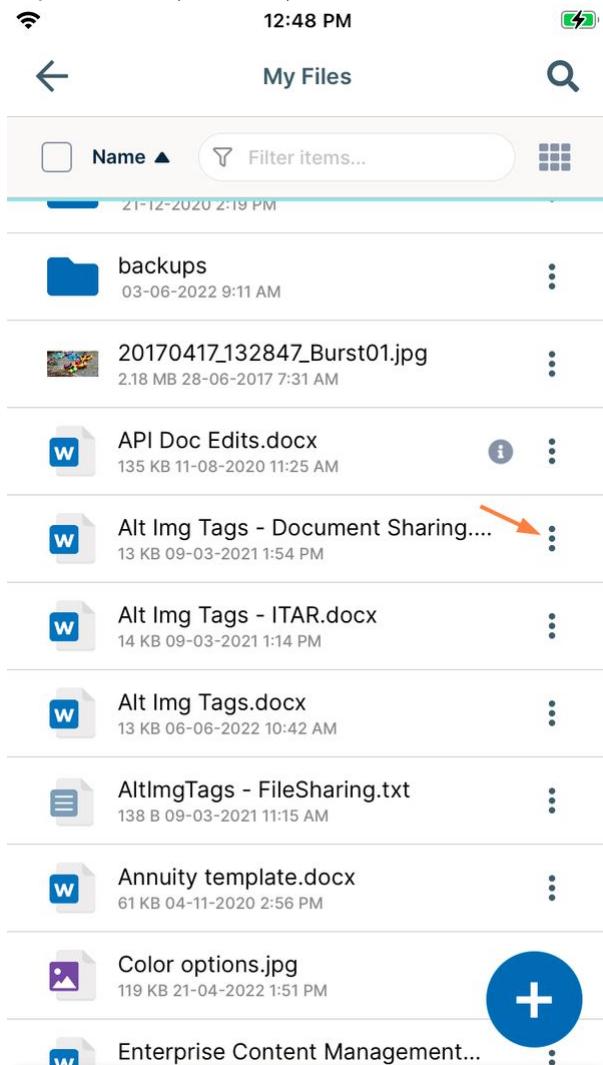

Mailing a file from FileCloud

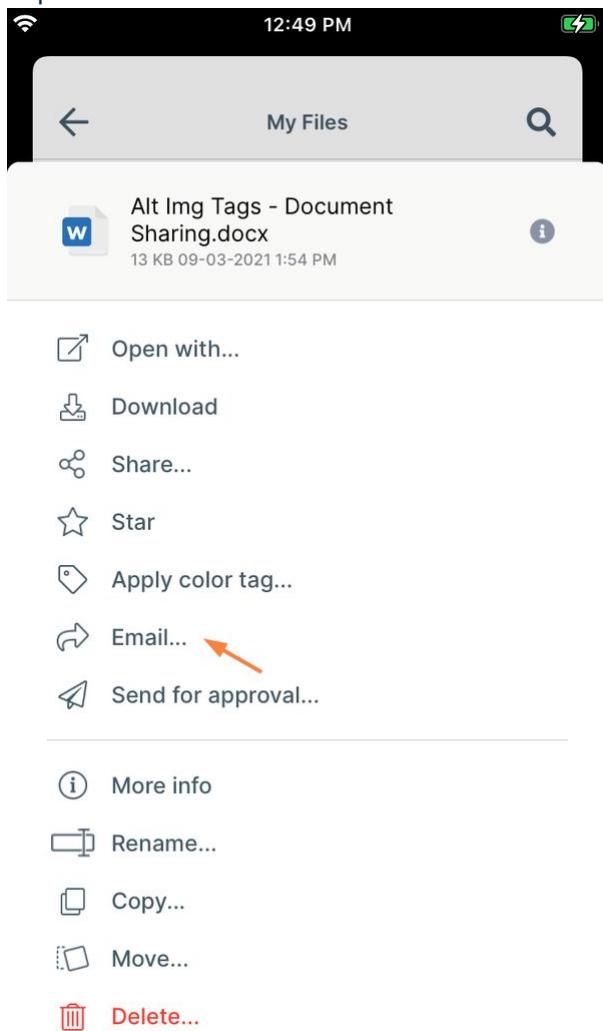

To mail a file from the FileCloud app:

1. Open the FileCloud App.
2. Navigate to the file you want to send.

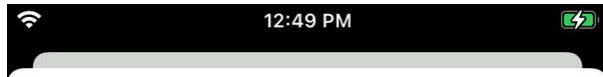

3. Tap the more (three dot) icon next to the file.

A list of options opens.

4. Tap **Email**.

The file is attached to an email that contains the subject and message **File sent via FileCloud**.

[Cancel](#)

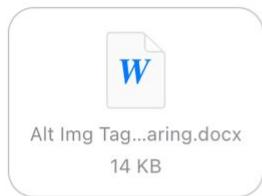

File sent via FileCloud

To:

Cc/Bcc:

File sent via FileCloud

Sent from my iPhone

5. Enter **To:** addresses and send the email.

Android

After you install FileCloud's Android app and add your FileCloud account, you can access, edit, share, and secure your files.

In this section:

- [Installing FileCloud on Android and Logging in to Your Account \(see page 299\)](#)
- [Android Settings for FileCloud \(see page 317\)](#)
- [File and Folder Actions on Android \(see page 325\)](#)
- [Syncing FileCloud on Android \(see page 507\)](#)
- [Using FileCloud with Other Android Apps \(see page 518\)](#)
- [Troubleshooting Android Issues \(see page 540\)](#)

Also see:

[Microsoft Office Integration](#)

Installing FileCloud on Android and Logging in to Your Account

- [Installing the App on Android \(see page 299\)](#)
- [Logging in to FileCloud on Android \(see page 301\)](#)
- [Logging in with Device Authentication on Android \(see page 305\)](#)
- [Logging in with SSO on Android \(see page 311\)](#)
- [Log in with Two-Factor Authentication on Android \(see page 312\)](#)
- [Navigating in FileCloud on Android \(see page 316\)](#)

Installing the App on Android

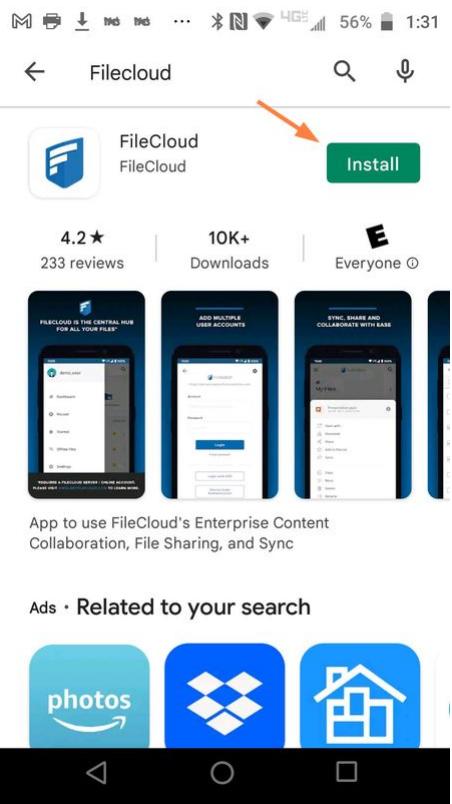

You must set up the FileCloud Android App before you can access the files in your FileCloud account.

To install the FileCloud app:

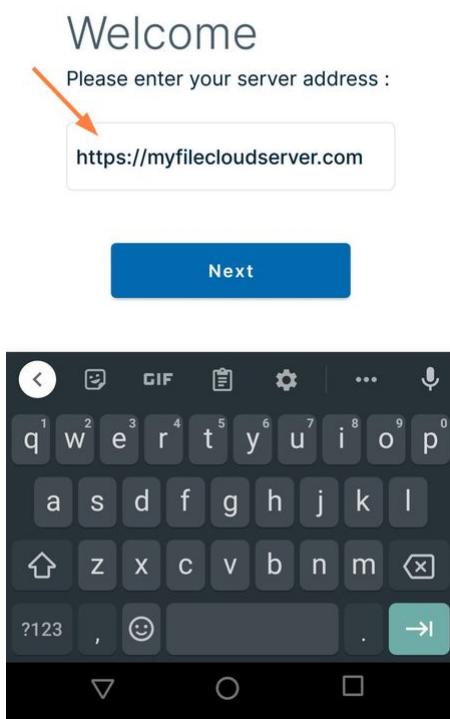

1. On your Android device, open the Google Play Store, and find the [FileCloud App](#)⁶.

6. <https://play.google.com/store/apps/details?id=com.filecloud.android>

2. Click **Install**.

3. Once the app is installed, click **Open**.
The **Welcome** screen for the app opens.
4. Enter your FileCloud address, and click **Next**.
The **Welcome** screen opens.

Now, you can [enter your FileCloud address and log in \(see page 301\)](#).

Account security

How secure is my account?

Authentication information is saved securely in Android's security infrastructure and cannot be accessed by anyone even if your device is lost.

- The connection between your Android device and FileCloud can be secured by using <https://> instead of <http://> (at a cost of speed).
- All access to FileCloud in a LAN (where your Android device and FileCloud are in the same network) is always direct (your data is never sent outside the network in those cases).

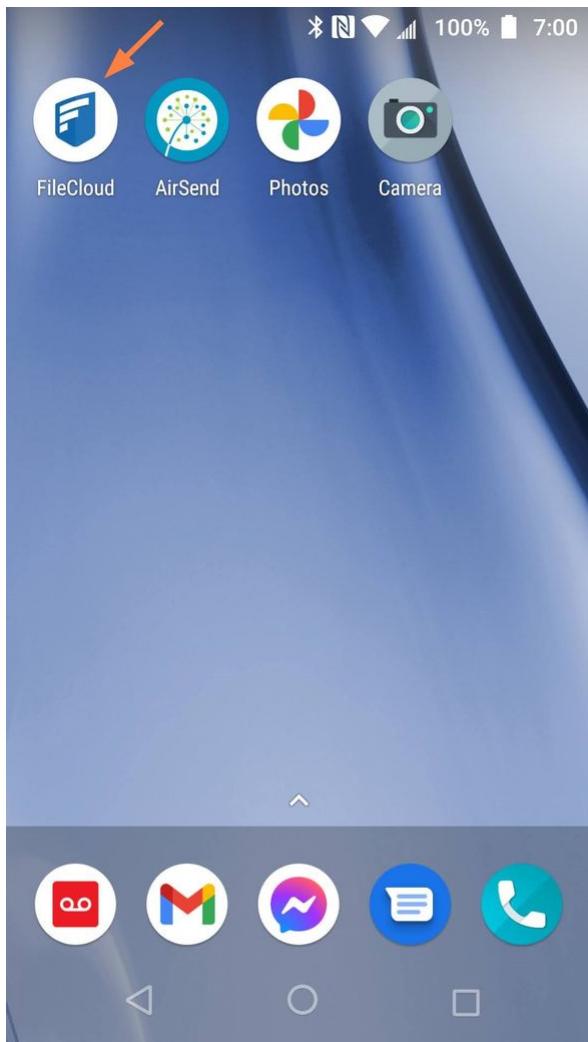

How can I keep my account locked and use a PIN or fingerprint scan to open it?

See [Setting a Lock on Your Android App \(see page 322\)](#) to lock your app and add a PIN or fingerprint for opening it.

Logging in to FileCloud on Android

To log in to the FileCloud app on Android:

1. Tap the FileCloud icon.

The **Welcome** screen opens.

2. Enter your FileCloud address, and tap **Next**.

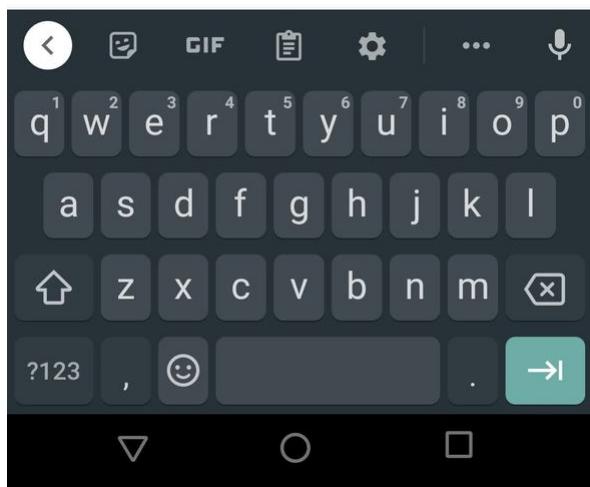

Welcome

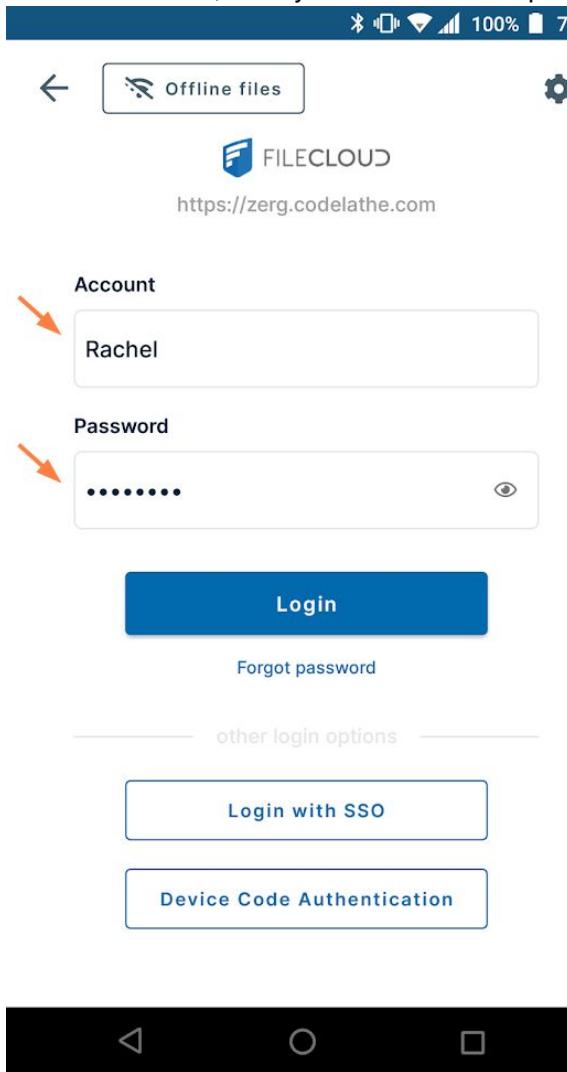

Please enter your server address :

<https://myfilecloudserver.com>

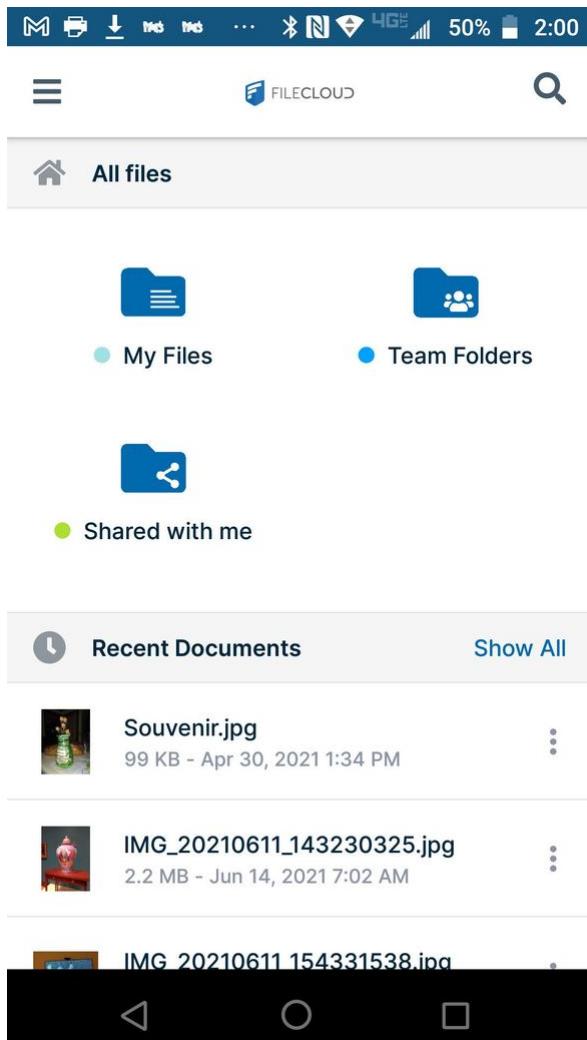

Next

3. In the next screen, enter your username and password and tap **Login**.

Once the account is authenticated, your dashboard opens, and you can access your files.

Logging in with Device Authentication on Android

Logging in with a device authentication code requires you to enter an additional code that confirms you are approved to log in through your Android device.

Admin configuration for Device Authentication

To enable users to use a device authentication code to log in, you must enable it in the admin portal's settings.

Code-based device authentication is set by policy. It requires users to request approval to log in to a desktop app or mobile app. When the request is approved, a code is created which the user must enter into the app to log in. Requests are approved in the user portal, but additional admin approvals may also be required.

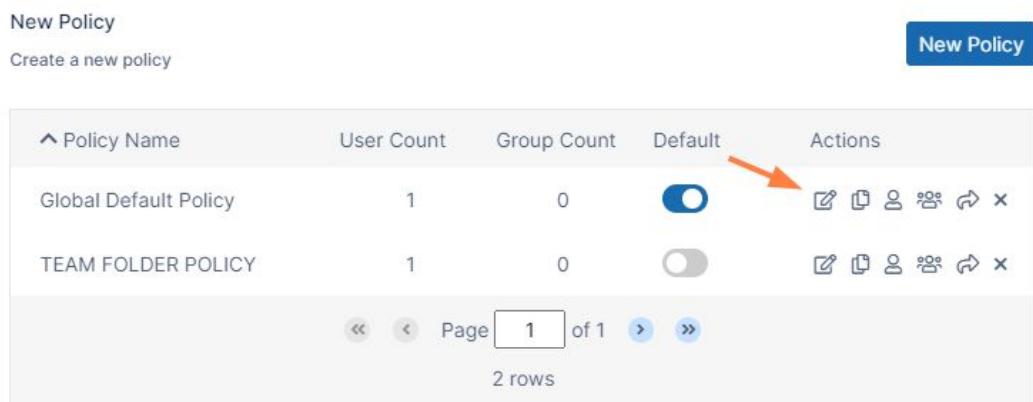

Enabling code-based device authentication

Enable Code based device authentication

To enable code-based device authentication:

1. In the FileCloud admin portal's left navigation bar, scroll down and click **Settings**. Then, on the **Settings** navigation page, click **Policies** .
2. The **Policies** settings page opens.
2. Click the Edit icon in the row for the users' policy.

Policies

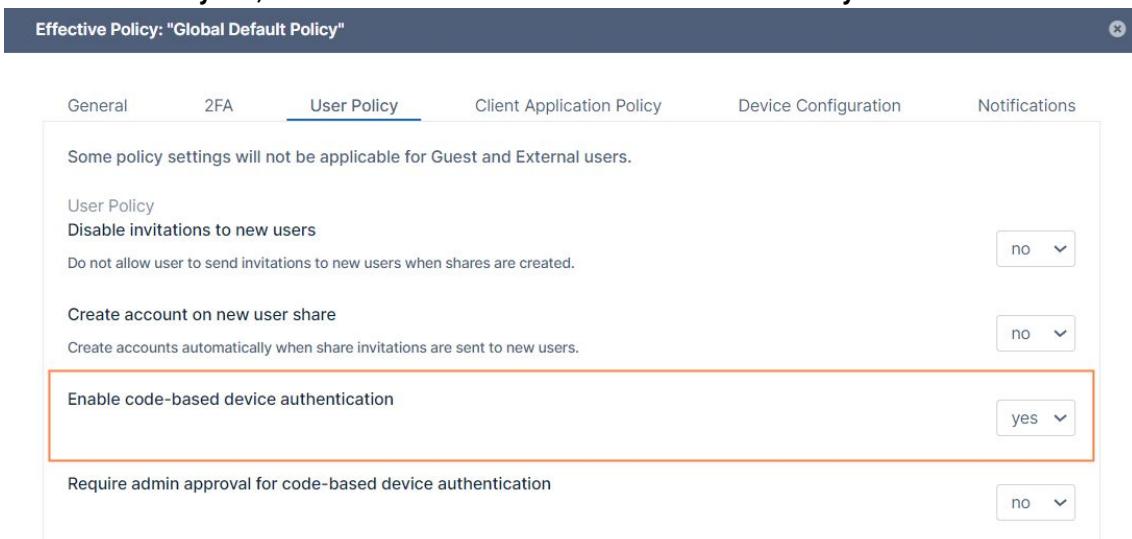

Policy Name	User Count	Group Count	Default	Actions
Global Default Policy	1	0	<input checked="" type="checkbox"/>	      
TEAM FOLDER POLICY	1	0	<input type="checkbox"/>	      

Page 1 of 1

2 rows

The **Policy Settings** dialog box opens.

3. Click the **User Policy** tab.
4. In the **User Policy** tab, set **Enable code-based device authentication** to **yes**.

Effective Policy: "Global Default Policy"

General	2FA	User Policy	Client Application Policy	Device Configuration	Notifications
Some policy settings will not be applicable for Guest and External users.					
<p>User Policy</p> <p>Disable invitations to new users <input type="checkbox"/></p> <p>Do not allow user to send invitations to new users when shares are created. <input type="checkbox"/></p> <p>Create account on new user share <input type="checkbox"/></p> <p>Create accounts automatically when share invitations are sent to new users. <input type="checkbox"/></p> <p>Enable code-based device authentication <input checked="" type="checkbox"/></p> <p>Require admin approval for code-based device authentication <input type="checkbox"/></p>					

Now, when a user logs in to a client app, an approval request appears in the user portal. The user must approve the request to receive a code that is entered into the client app to

successfully log in.

How users log in with device authentication, below, shows how this process works.

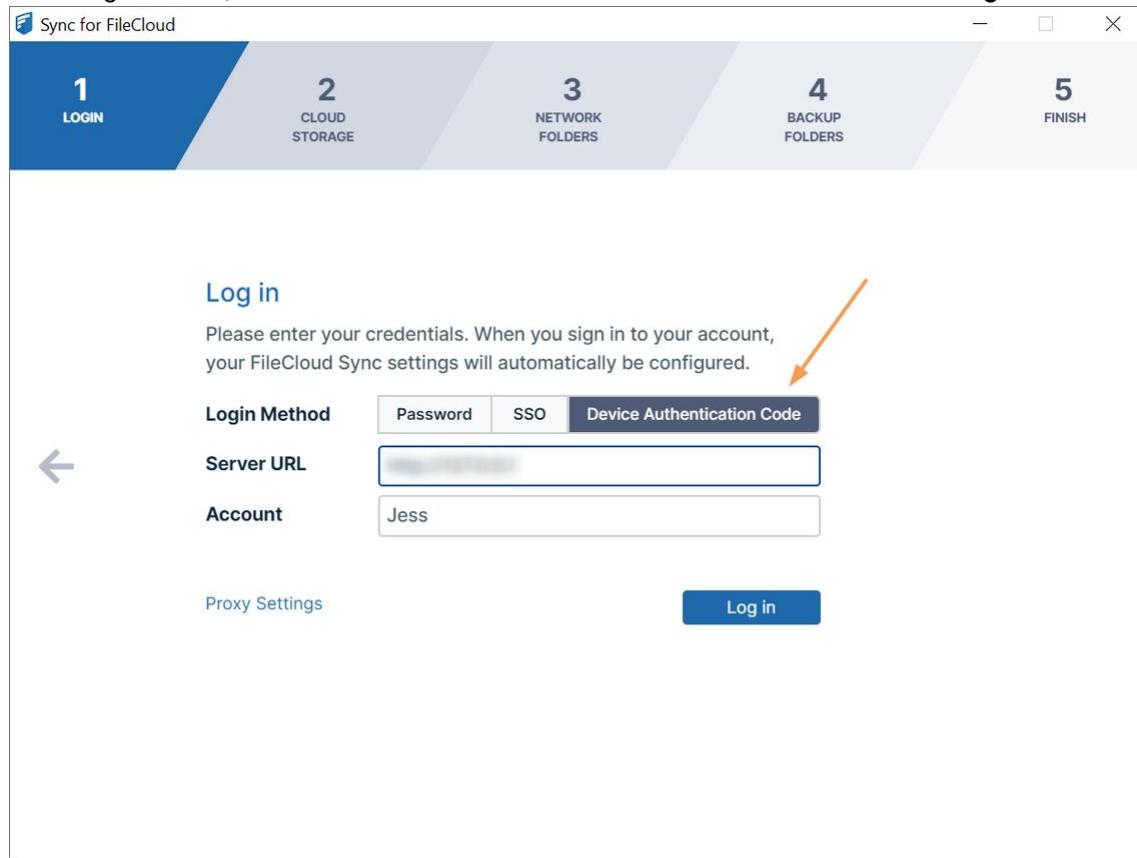

How users log in with device authentication

How users log in with device authentication to desktop apps

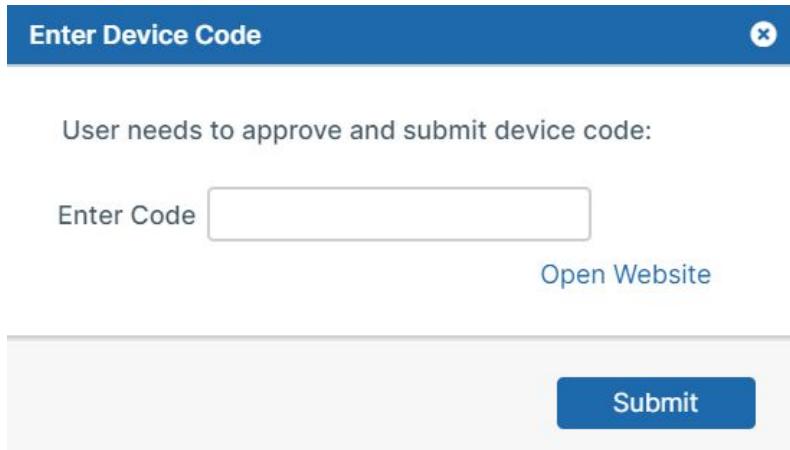

Once code based authentication is enabled, the user can follow these steps to log in via a desktop app.

The following example uses the Sync application, but the procedure is the same for all of the desktop applications and the mobile apps.

1. In the login screen, the user selects **Device Authentication Code** and then clicks **Log in**.

The following dialog box opens.

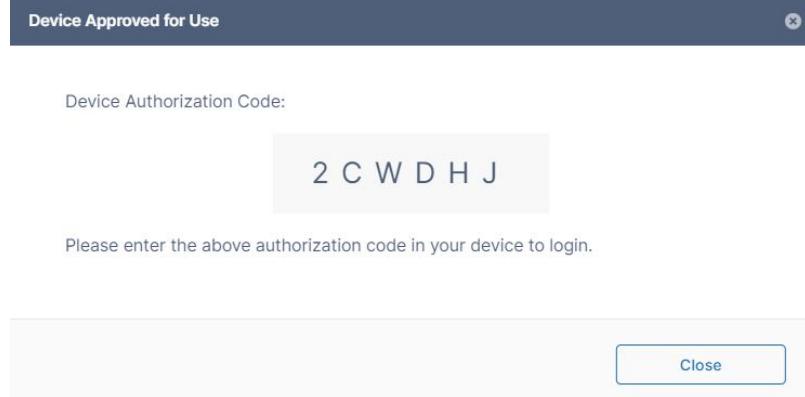

2. To get the device authorization code:

- The user logs in to the user portal, then clicks the arrow next to the username and chooses **Settings**..
- In the **Settings** screen, the user click the **Devices** tab.
- The user clicks the check next to **Needs Approval**.

Device Name	Device Details	Last Login	Device Status	Actions
Cloud Sync (DESKTOP-N71N3EH)	OS: Windows 8.6.2 (Build 9200), App: 20.2.0.4954	November 19th 2020 11:29AM	Needs Approval ✓	✗
MS Outlook (DESKTOP-N71N3EH)	OS: Windows Microsoft Windows NT 10.0.18363.0, App: 15.1.2.3	October 8th 2020 2:08PM	Approved	✗
FileCloud Drive (DESKTOP-N71N3EH)	OS: Windows 8.6.2 (Build 9200), App: 20.2.0.4723	October 8th 2020 1:46PM	Approved	✗

A dialog box pops up with the **Device Authorization Code**:

3. The user copies the **Device Authorization Code** and pastes it into the **Enter Device Code** dialog box, then clicks **Submit** to log in.

Enter Device Code ×

User needs to approve and submit device code:

Enter Code

[Open Website](#)

 Submit

Requiring admin approval as well as user approval for devices

Requiring admin approval to log in with client devices

The **Enable code based device authentication** setting lets users log in to desktop apps using a device authorization code without admin approval. You can also can configure FileCloud to require logins to desktop apps to be approved by admins before being approved by users.

To require admin approval for device authentication:

1. In the FileCloud admin portal's left navigation bar, scroll down and click **Settings**. Then, on the **Settings** navigation page, click **Policies** . The **Policies** settings page opens.
2. Open a policy for edit.
3. In the **User Policy** tab, set **Enable code based device authentication** to **YES**. The **Require Admin Approval for Device Authentication** setting becomes enabled.

4. Set **Require Admin Approval for Device Authentication** to **YES**.

Effective Policy: "Admin Users"

General	2FA	User Policy	Client Application Policy	Device Configuration	Notifications
Some policy settings will not be applicable for Guest and External users.					
User Policy					
Disable invitations to new users Do not allow user to send invitations to new users when shares are created.					
Create account on new user share Create accounts automatically when share invitations are sent to new users.					
Enable code-based device authentication Require admin approval for code-based device authentication					
Enforce session timeout for devices using code-based device authentication.					
Allow folder level security Allow users to set folder level security for granular permissions.					
<input type="button" value="Cancel"/> <input type="button" value="Reset"/> <input type="button" value="Save"/>					

To approve a client device that has been sent to you for admin approval

1. Go to **Device Management** in the admin portal to view the listing for the device approval.
The device is listed with Status showing Needs Admin Approval and Access set to Blocked.

Manage Devices

Health	Type	User name	Device Name	Device Details	Last Access	Status	Access	Action	Logs
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	jenniferp	Cloud Sync	App version: 23.232.0.8639 OS: Windows 11 - 10.0 (Build 22621)	Today at 11:44 AM from 127.0.0.1	Needs Admin Approval	Blocked	<input type="button" value="1"/>

2. In the **Access** column, change **Blocked** to **Allowed**.

Now the **Status** column shows **Needs User Approval**, and the user must approve the client device (as shown above in How users log in with device authentication) and get an authorization code before log in can occur.

Manage Devices

Health	Type	User name	Device Name	Device Details	Last Access	Status	Access	Action	Logs
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	jenniferp	Cloud Sync	App version: 23.232.0.8639 OS: Windows 11 - 10.0 (Build 22621)	Today at 11:50 AM from 127.0.0.1	Needs User Approval	Allowed	<input type="button" value="0"/>

Logging in with SSO on Android

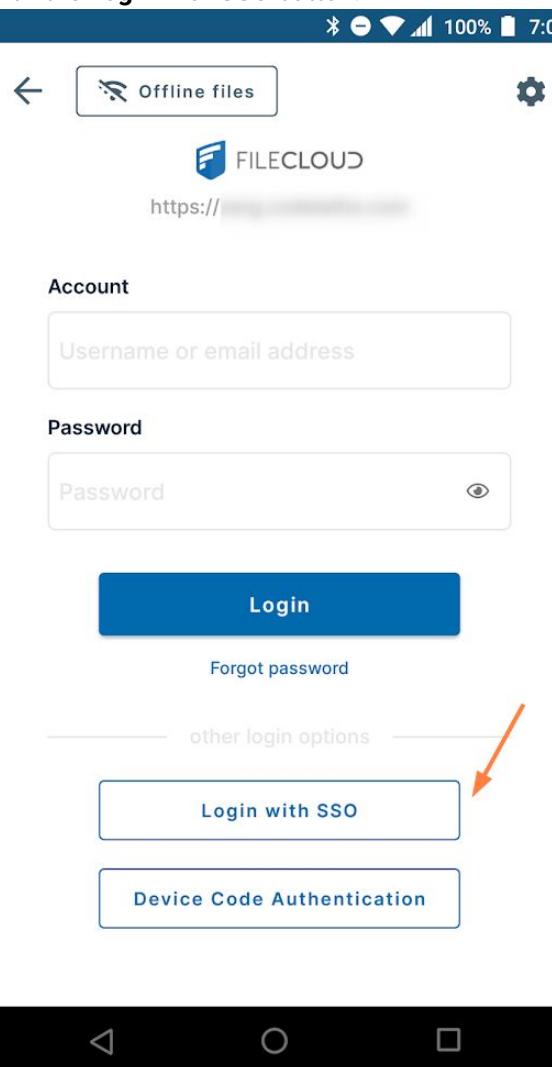

Note: Filecloud only supports SAML SSO. It does not support NTLM SSO.

Single sign-on (SSO) is a type of a user authentication that enables you to log in once to multiple software applications. If your admin sets it up, they will provide you with an SSO username and password.

If SSO is set up in your system, you will see a **Login with SSO** button on the **Login** screen.

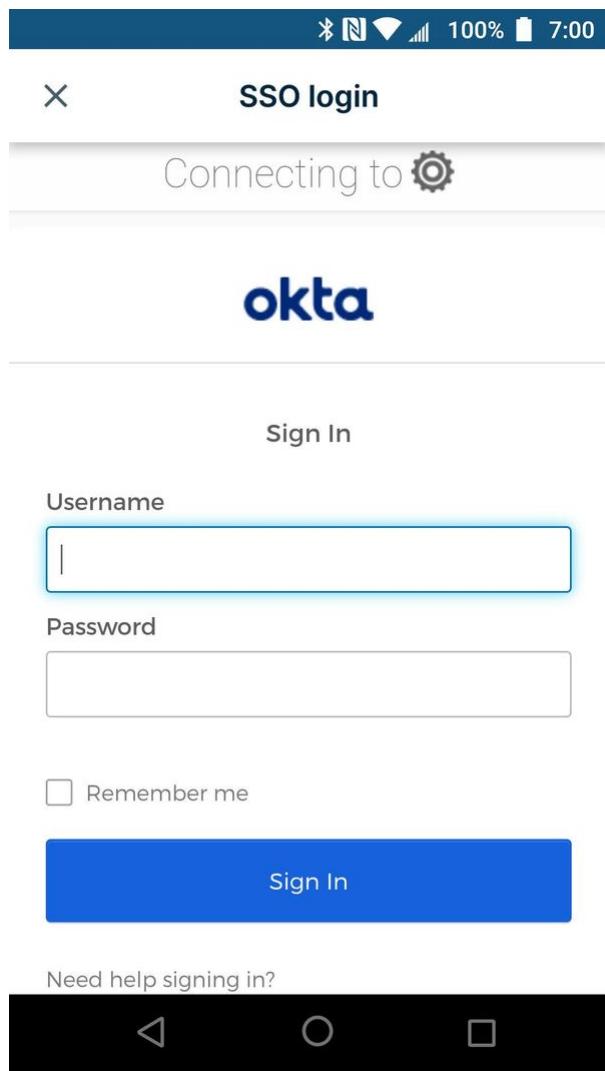

To log in with SSO:

1. Click the **Login with SSO** button.

2. You are redirected to your SSO login page.

For example:

3. Enter with your SSO username and password.
You are logged in to FileCloud.

Log in with Two-Factor Authentication on Android

To log in with two-factor authentication, your administrator has to configure this feature.

Your company might require you to use two-factor authentication.

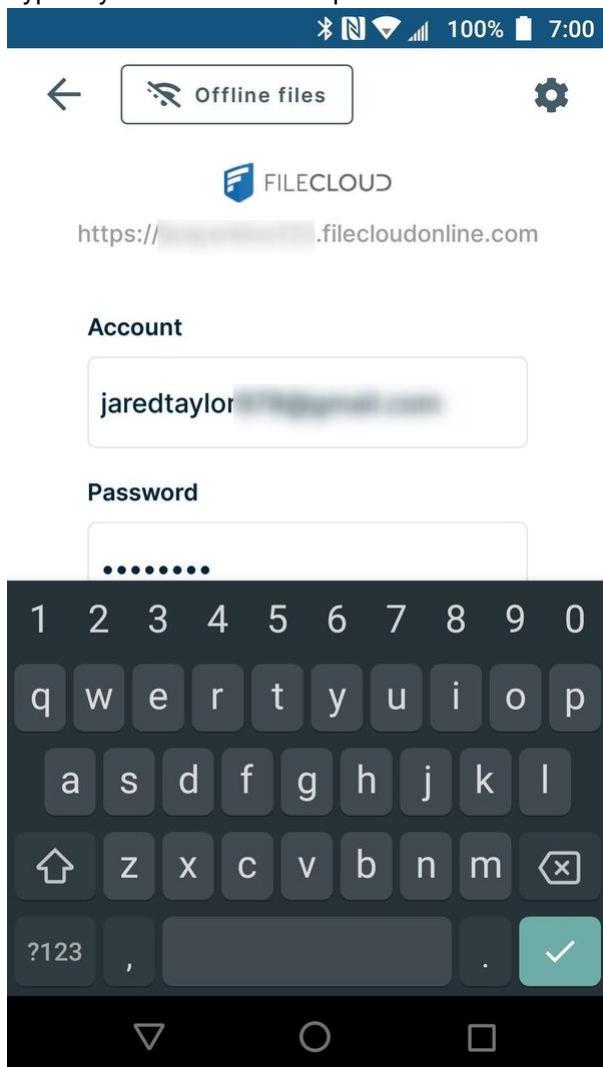

- Two-factor authentication provides an extra layer of security.
- In order to access FileCloud, you must know not only the password and username for your account but also an extra security code that is sent to you.

If you cancel a login attempt without entering the security code, and then re-enter your FileCloud account information, you will be sent a new security code. Once you successfully log in, you will not have to enter a security code again unless your administrator deletes your Android from FileCloud's list of devices.

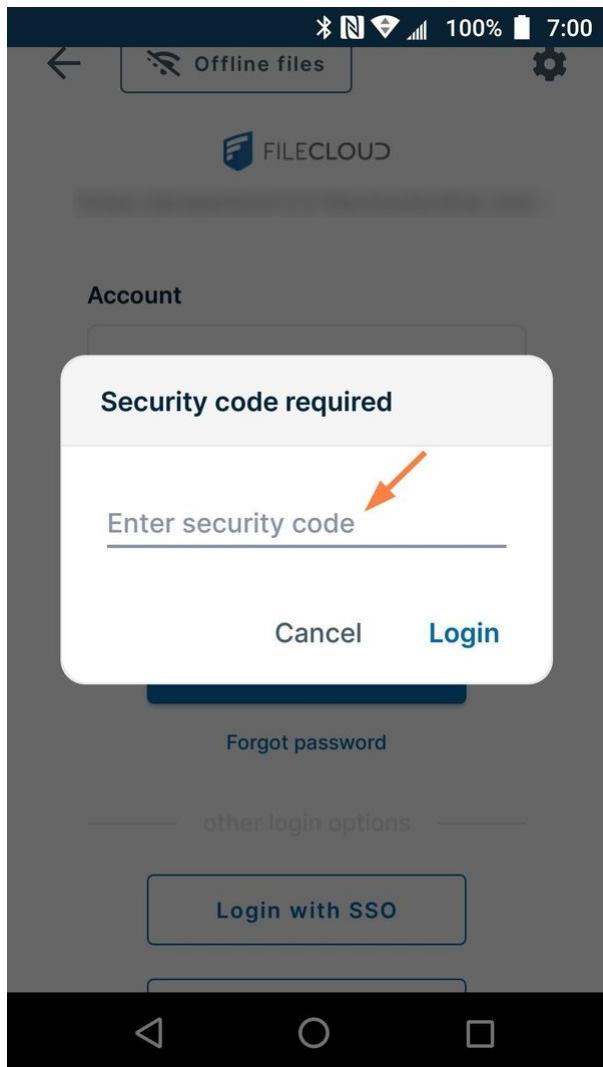

To log in with two-factor authentication:

1. Open the Filecloud app.
2. Type in your username and password.

You are prompted to enter your security code. Your admin can tell you if your security code is sent to you by email, sms, or another method.

3. Enter your security code into the prompt, and click **Login**.

You are logged in to your FileCloud account.

The screenshot shows the FileCloud mobile application interface. At the top, there is a blue header bar with icons for signal strength, battery level (100%), and the time (7:00). Below the header is the FileCloud logo. The main screen is titled "All files". It features two main sections: "My Files" and "Shared with me", each represented by a folder icon with a share symbol. Below these sections, there is a "Recent Documents" section with a clock icon, showing a single document entry: "PagesWithChars.txt" (1 KB - Feb 11, 2022 10:14 AM). To the right of this entry is a vertical ellipsis (...). Below the recent documents is a "Starred" section with a star icon, which is currently empty. At the bottom of the screen is a black navigation bar with three white icons: a triangle pointing left, a circle, and a square.

Navigating in FileCloud on Android

FileCloud's Android interface has a navigation pane that you can access by clicking the menu icon in the upper-left corner of the page:

Clicking the icon opens a panel of navigation links:

1. **Dashboard** - Opens the Android dashboard. For definitions of the folders that appear on the dashboard, see [My Files](#), [Team Folders](#), [Network Shares](#), and [Shared with Me](#).
2. **Recent** - Opens the **Recent** screen, which lists the files you have accessed most recently.
3. **Starred** - Opens the **Starred** screen, which lists the files and folders you have starred as favorites.
4. **Shared by me** - Opens the **Shared by Me** screen, which lists the files and folders you have shared with other users or groups.
5. **Actions** - Opens the **Actions** page, which lists any file approvals sent to you. The **Inbox** lists outstanding approvals, and the **Sent** box lists files that you have already approved or rejected. For more information, see [Approving files in Android](#) (see page 468).
6. **File operations** - Opens the File Operations window, which lists recent media sync operations. See [View File Operations in Android](#) (see page 501).
7. **Settings** - Opens a page of FileCloud Android settings as well as helpful information and links. See [Android Settings for FileCloud](#) (see page 317).
8. **Offline files** - Opens a list of the folders that store offline files on your phone. If you are the only FileCloud user on your Android device, and you use offline files, you will see only one folder that stores your offline files. However, if more than one FileCloud account use your Android device and use offline folders, you will see a separate folder for each user's offline files.

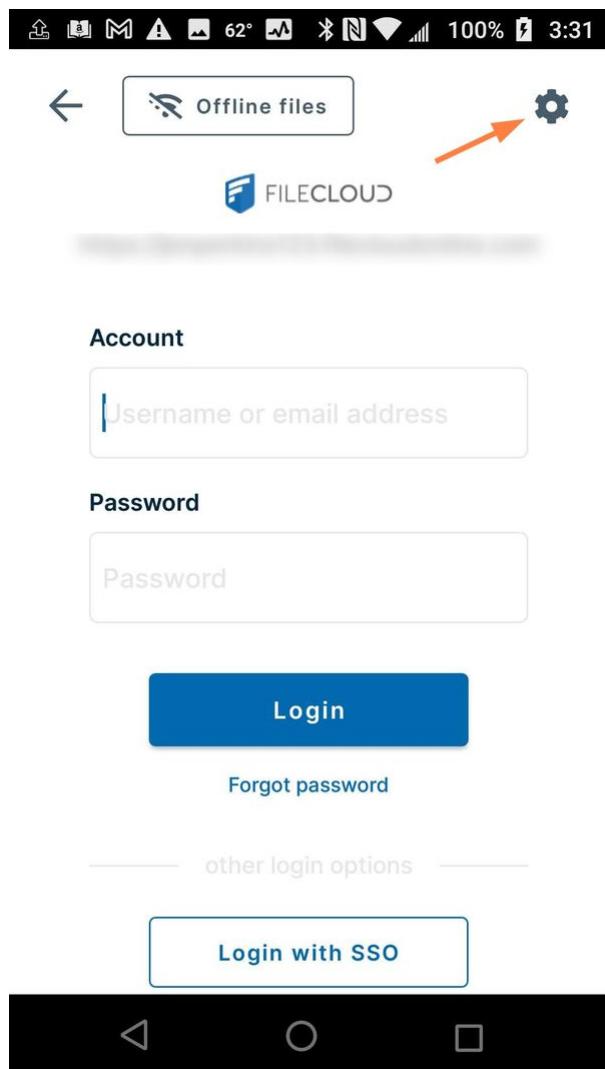

In the navigation panel, a **Sync** button appears beside the **Offline files** link. Click the **Sync** button to synchronize your offline and online folders.

For more information about setting up offline folders and syncing files in Android, see [Syncing FileCloud on Android](#) (see page 507).

Android Settings for FileCloud

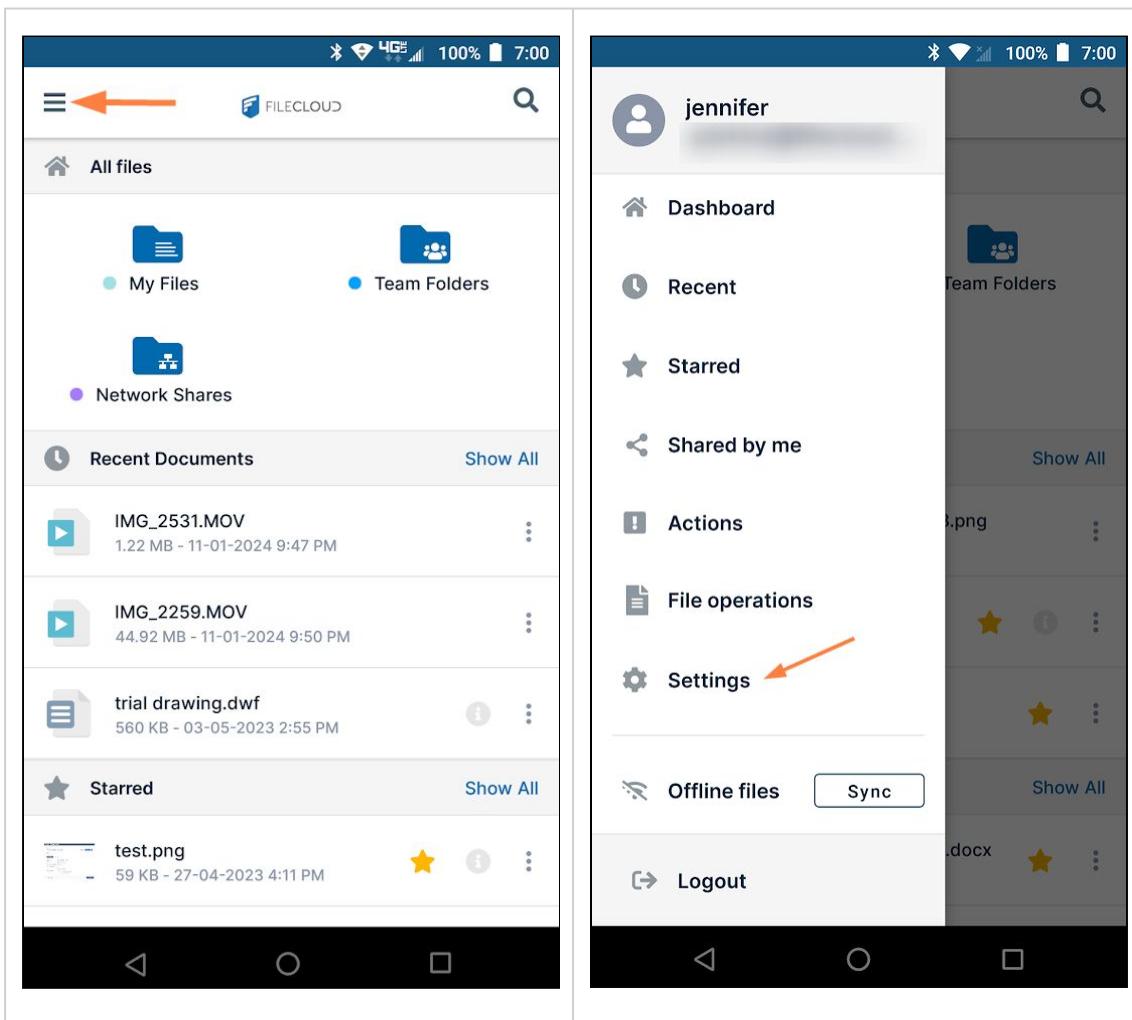

To access settings for your FileCloud Android app, either:

- Tap the gear icon in the login screen

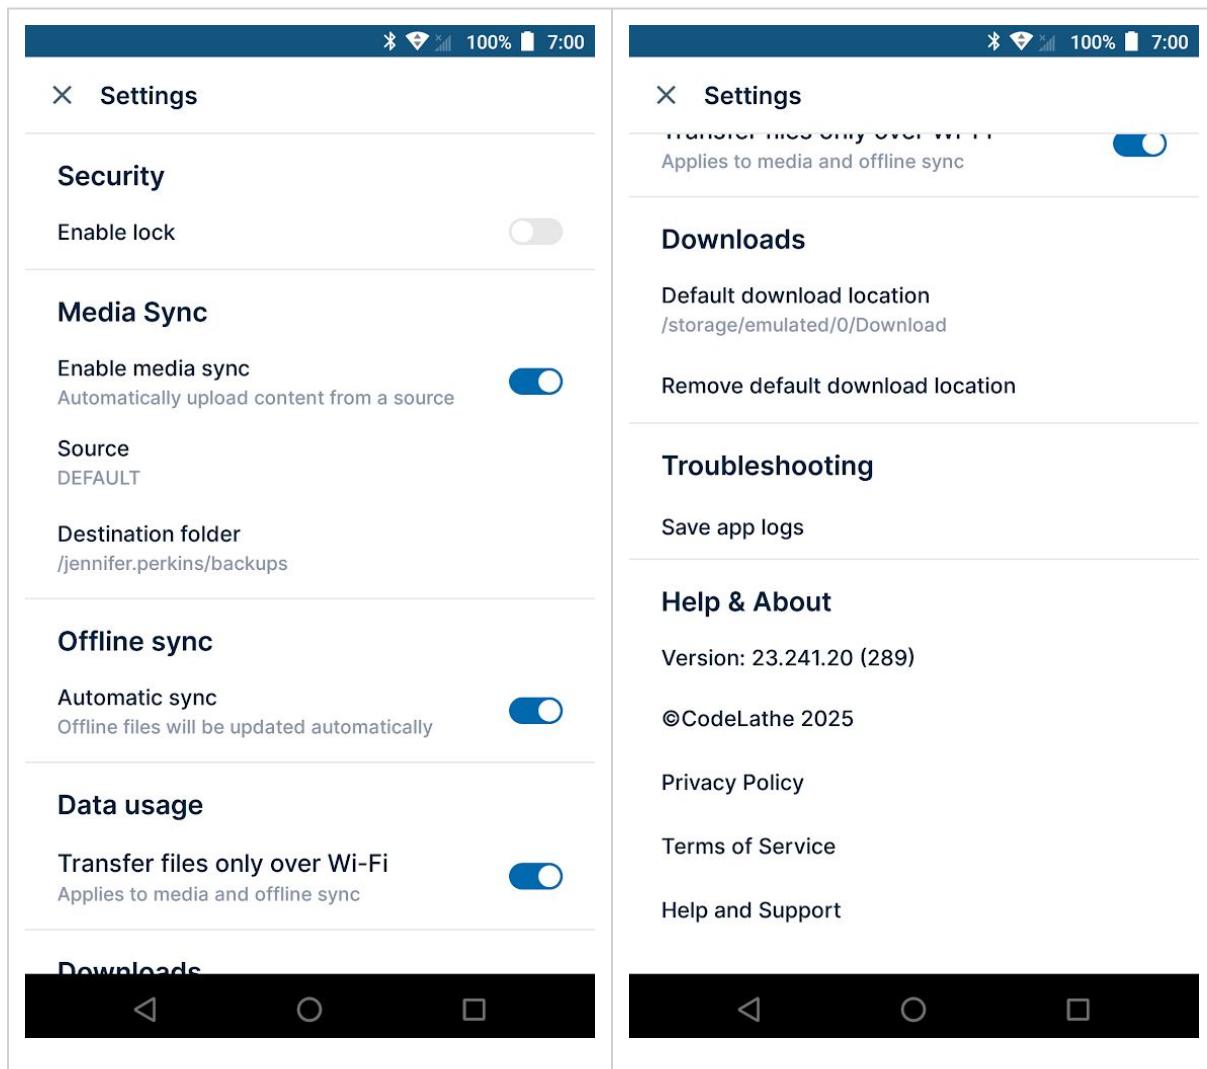

or

- Log in to the app, and tap the menu icon in the upper left corner, then choose **Settings**.

The Settings options appear.

Security: To add a password or fingerprint for unlocking the app, see [Installing the App on Android](#) (see page 299).

Media Sync: To automatically upload media files to FileCloud. When this is enabled, the **Source** and **Destination folder** appear. See [Media Backup on Android](#) (see page 478).

Offline sync: To configure FileCloud files for offline editing and syncing, see the section [Syncing FileCloud on Android](#) (see page 507).

Data usage: By default, **Transfer files only over wi-fi** is enabled. To transfer files to your app by another method, disable the option.

Downloads: To set a default download location in Android, see [Set a Default Download Location on Android](#) (see page 321).

Troubleshooting: To set a location for storing your Android logs, see [Troubleshooting Android Issues](#) (see page 540).

Set a Default Download Location on Android

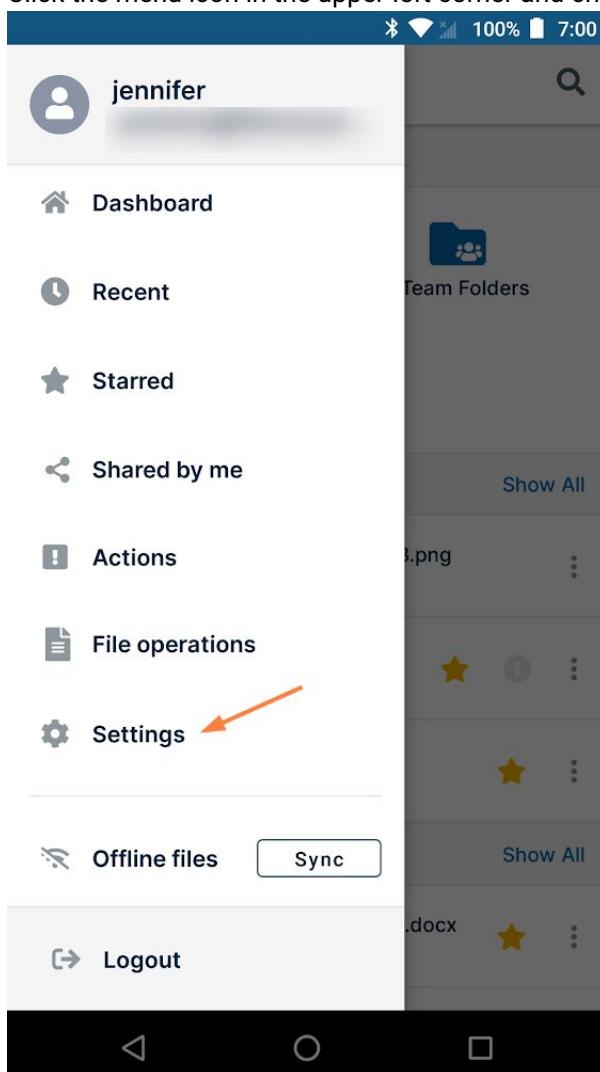

You can set a default download location where all downloaded files will automatically be stored.

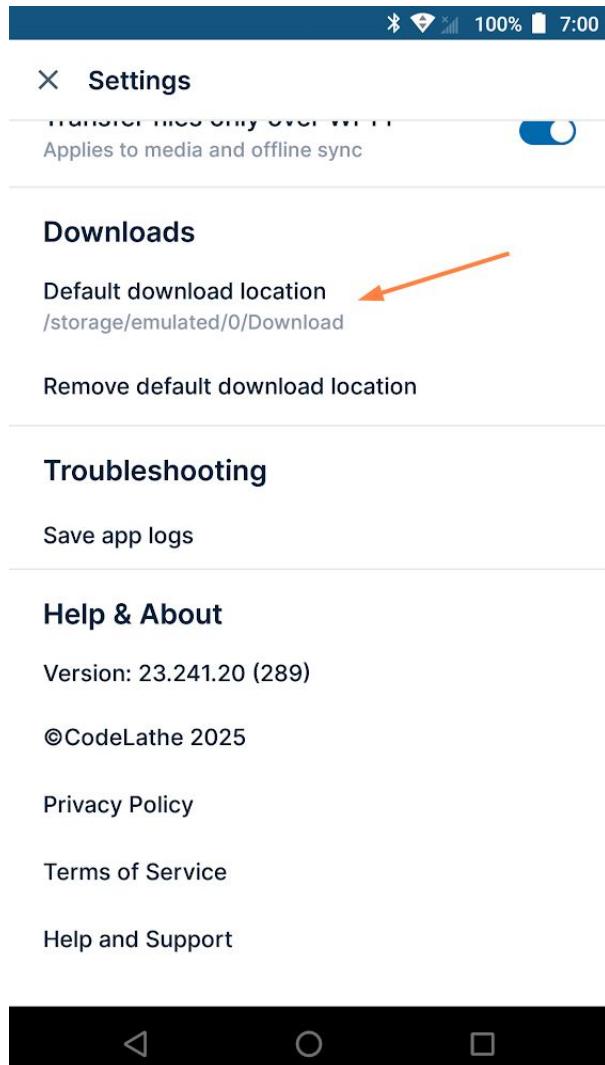

Setting a default download location will block a prompt from requesting a destination for each file you download.

To set a default download location:

1. Open the FileCloud app.
2. Click the menu icon in the upper-left corner and choose **Settings**.

3. Scroll down to the **Downloads** section.

4. Tap **Default download location**, then tap the listed storage space, and change the location or select a folder.

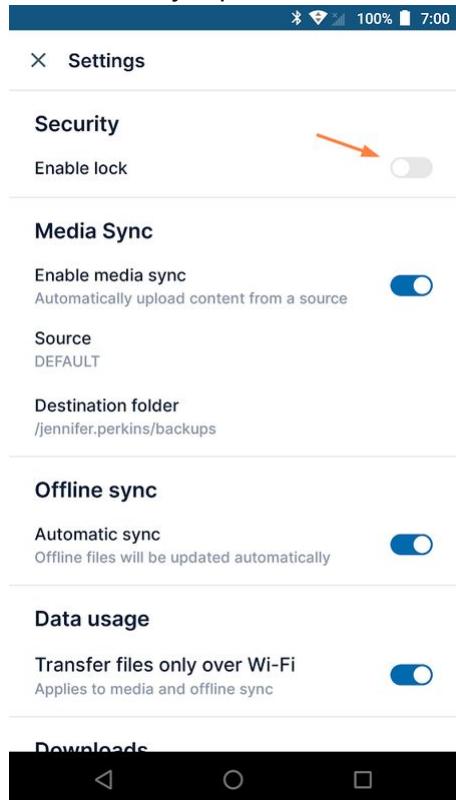

After you have chosen a destination, you will see an option to remove it. Removing your default download location will cause a prompt to request the destination of each file you download.

Setting a Lock on Your Android App

FileCloud's Android App allows setting a PIN code/fingerprint scan so you can lock the app.

To set up PIN code or fingerprint scan:

1. [Open your Android settings](#) (see page 317).
2. Under **Security**, tap the **Enable lock** slider so that it moves to the on position.

An **Enter Pin Code** screen automatically opens.

3. Enter a 4-digit pin code.
You are prompted to re-enter it. You may also be given the option of adding a fingerprint.

Enter pin code

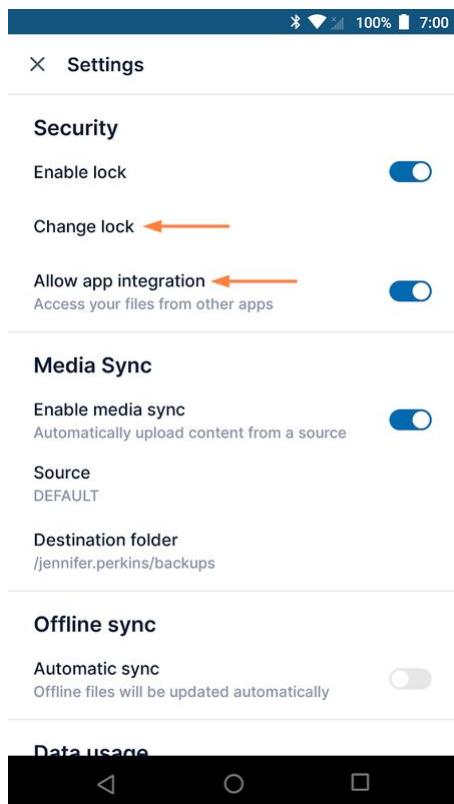

Use biometry

Now, each time you open the FileCloud app, you must enter your pin code or use your fingerprint to open the app to the login page.

Changing your pin code and allowing FileCloud access from other apps

After you add a pin code, two more options, **Change Lock** and **Allow app integration** appear in **Settings**:

- Tap the **Change lock** setting to change your 4-digit pin code.
- Leaving **Allow app integration** enabled lets you continue to access FileCloud files from other applications, although this function does not require the pin code. You may disable it if you want your lock protection to also prevent access to FileCloud files from other apps.
- Tap the slider for **Allow app integration**, so it appears disabled, to prohibit access to FileCloud apps from other apps on your phones.

Previewing and Editing Your Files in Android

After you install the FileCloud Android App you can preview the files in your FileCloud Server Account. You can edit some types of files in your FileCloud account; other file types have to be downloaded, edited in a third-party application, and re-uploaded to FileCloud.

In the FileCloud Android App you can:

- Preview .pdf and .txt files and edit them in the FileCloud Android application. No third-party app is required.
- Open Office files such as .docx, .xlsx, .pptx etc. by sending the file to the appropriate Android app or open them directly from the MS Office app.
- Open other file types by opening the file in the appropriate Android app.
- Stream music and video files.

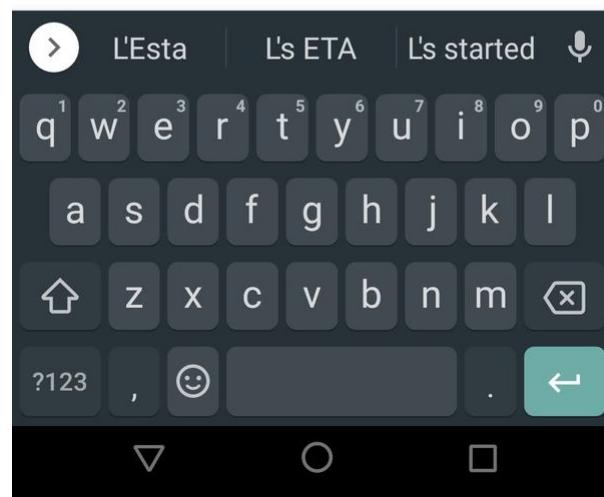

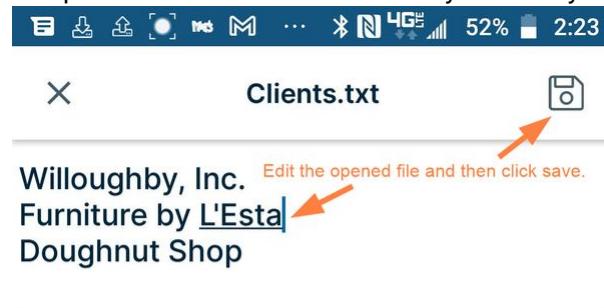

Previewing and editing PDFs and text files

How do I preview and edit PDFs and text files??

Tap the name or icon for a .pdf or .txt file, and it opens for preview in the FileCloud Android app. The preview screen for pdfs lets you open your document for edit using the Edit icon :

The preview screen for text files lets you directly edit the files. Tap the **Save** icon when you're done.

All changes to PDFs and text files are saved in FileCloud.

Previewing and editing Office files

What are my options for previewing and editing Office files?

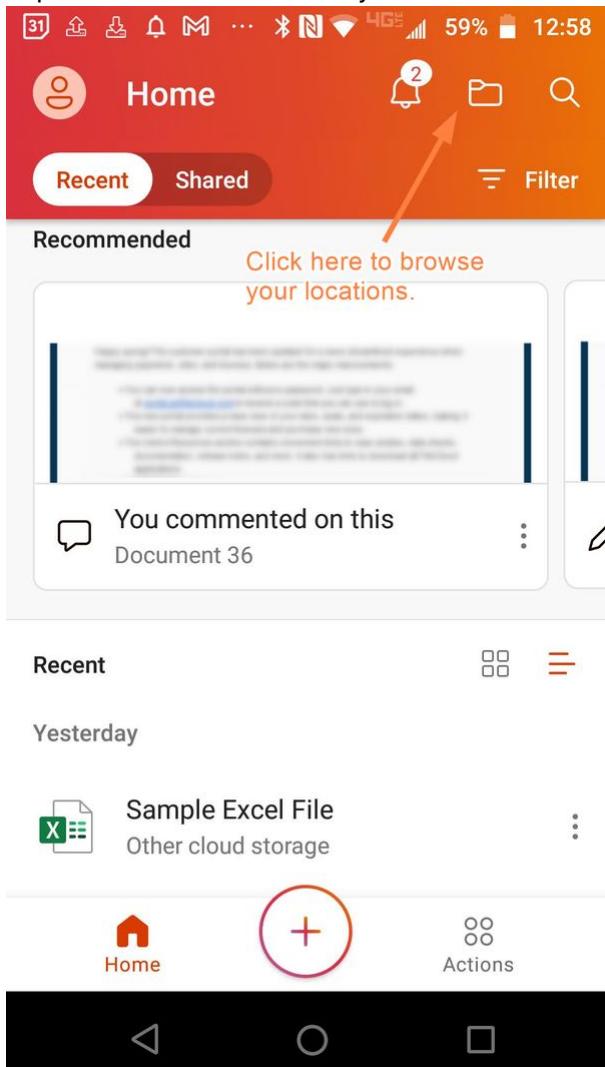

The recommended method of editing Office files in FileCloud is to open them from the Office app and make changes there. The changes are automatically saved to FileCloud.

You can also open the file in the FileCloud app and choose a third-party app to edit it with. However, in this case, the changes are not saved to FileCloud and you must upload the modified file to FileCloud.

To open an Office file for edit from the Office app:

1. If you do not have the Microsoft Office app installed, go to the Google Play store and install it.
2. Open the Office app on your Android device, and log in with the Office account you use with FileCloud.

3. Tap the folder icon to browse your locations.

4. Then tap the **Browse** cloud icon.

← Open

Places

Browse 
Google Drive, SD card, and more...

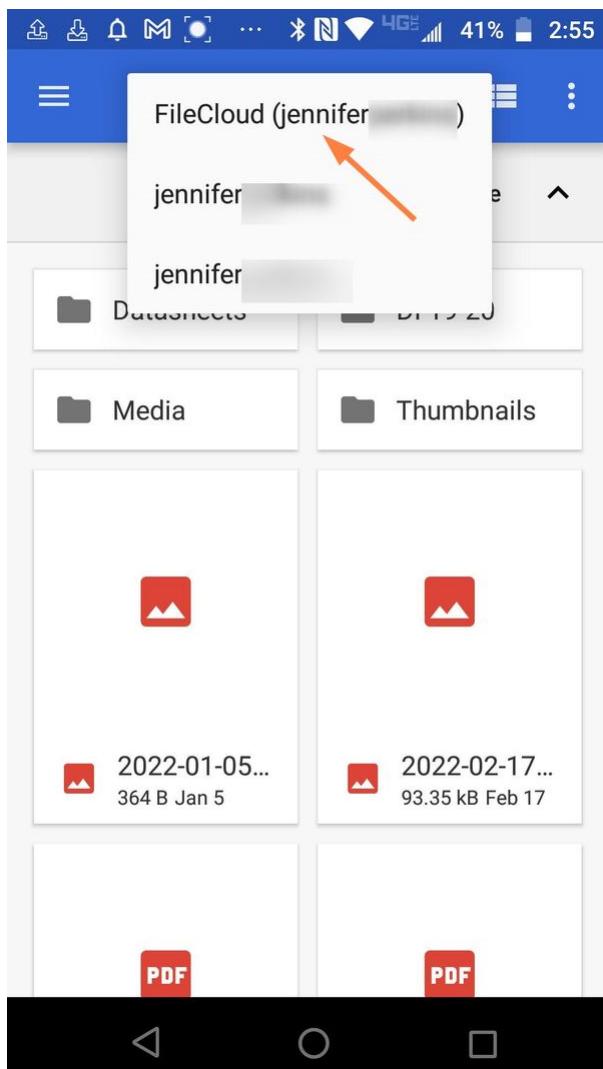

Add a place
Connect to cloud storage

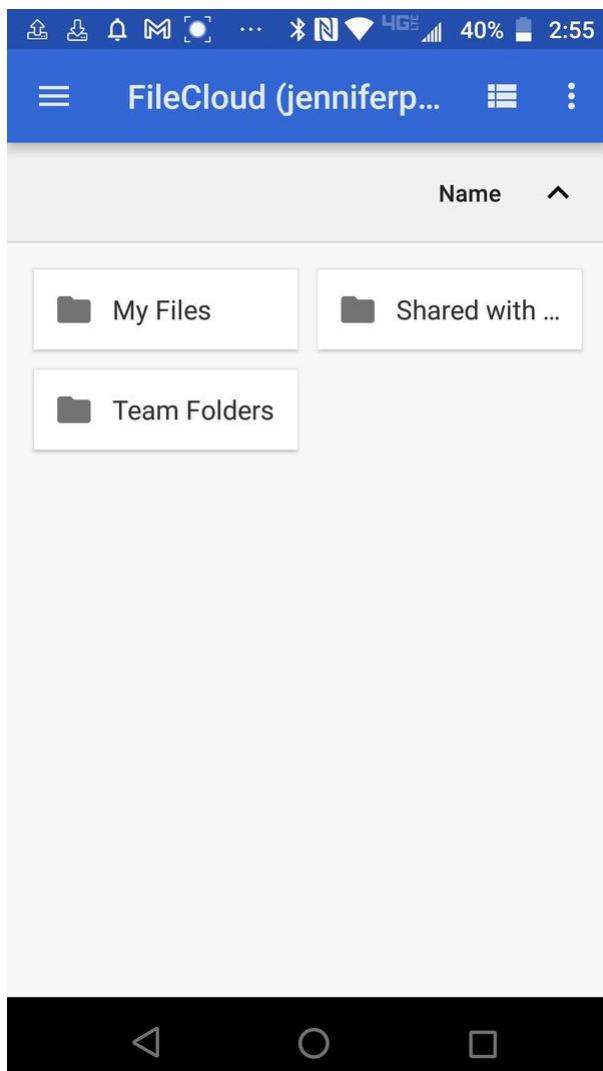

Files and folders stored in different locations appear.

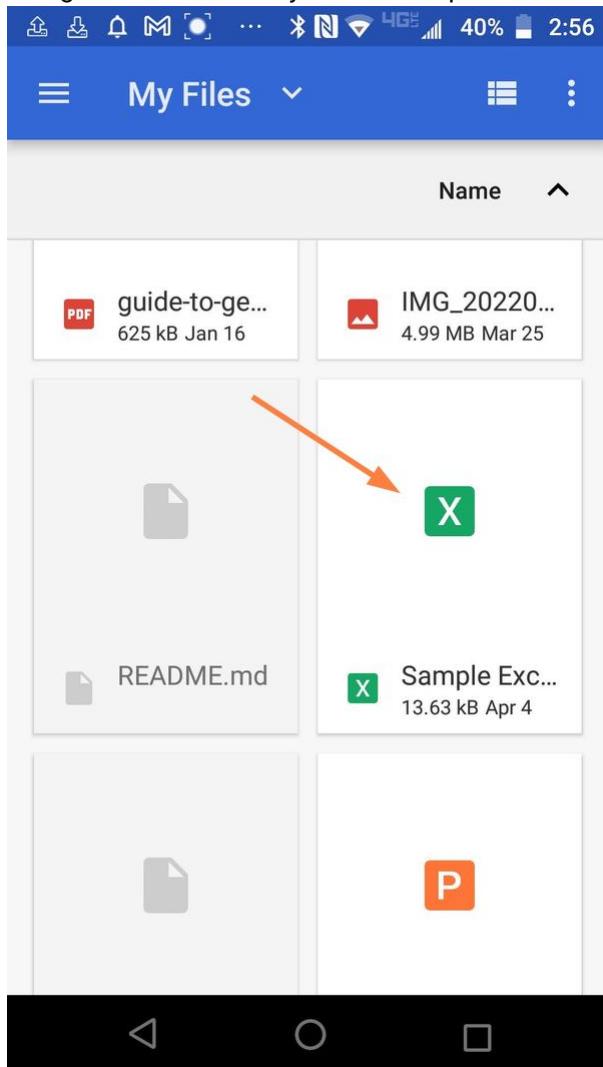

A different location than FileCloud may initially appear (for example, your Google Drive account). The name of the location at the top of the screen should be **FileCloud (username)**. If it is not, tap the drop-down arrow and choose **FileCloud (username)**.

Now you should see your FileCloud folders:

5. Navigate to the file that you want to open in an Office application and tap it.

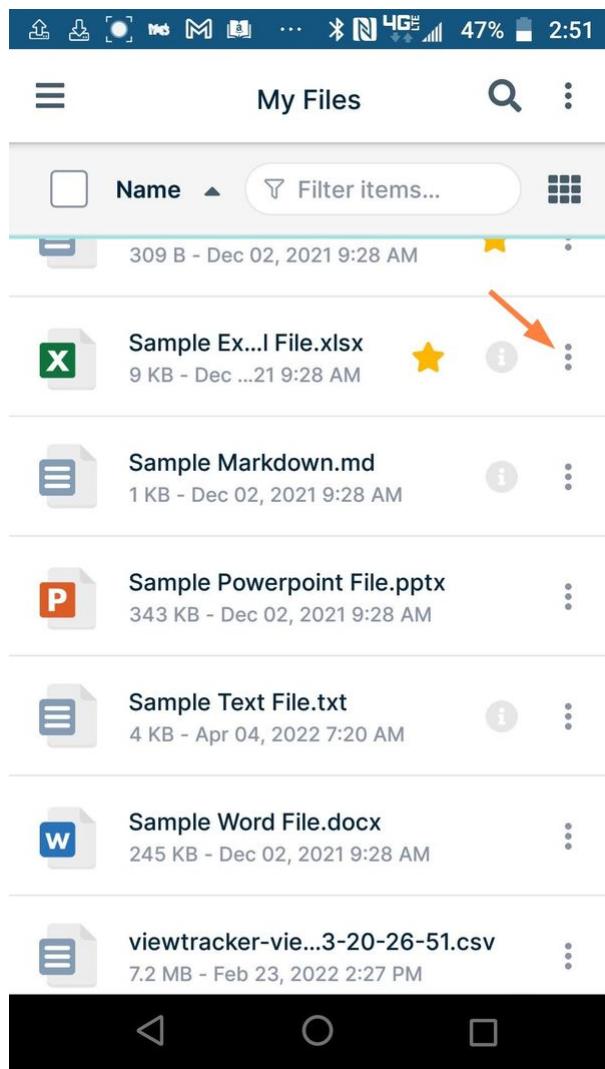

The file opens in the Office application:

	A	B	C	D	E
83		82 Stasia	Becker	Female	Great B
84		83 Jona	Grindle	Female	Great B
85		84 Judie	Claywell	Female	France

30	29	Garth	Gangi	Male	United

The updates to the file are not saved to FileCloud.

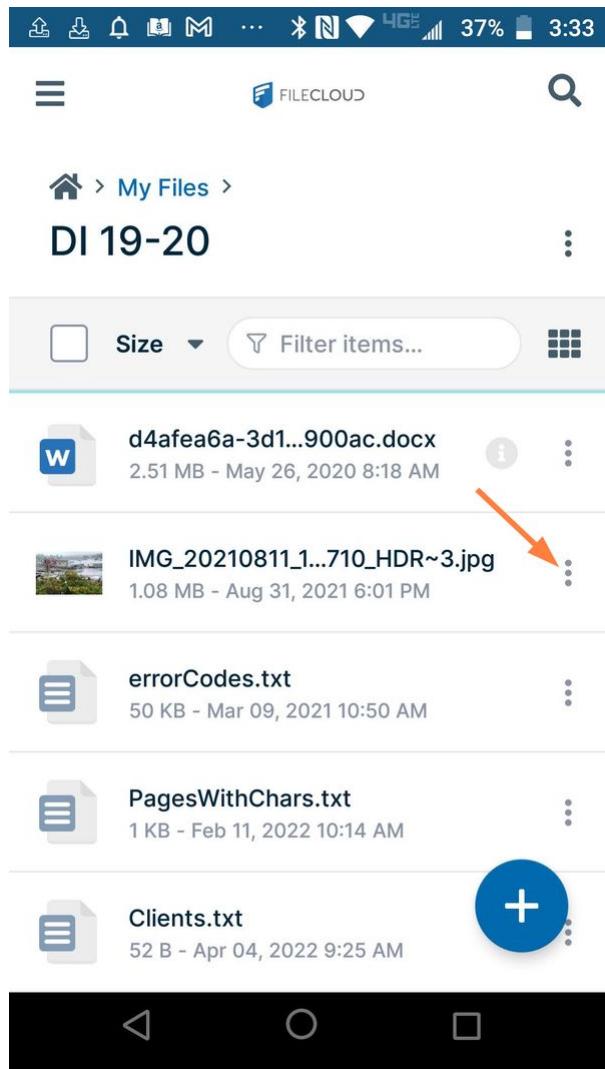

- Upload the modified file to FileCloud.

Previewing and editing other file types

How do I open other file types for preview or edit?

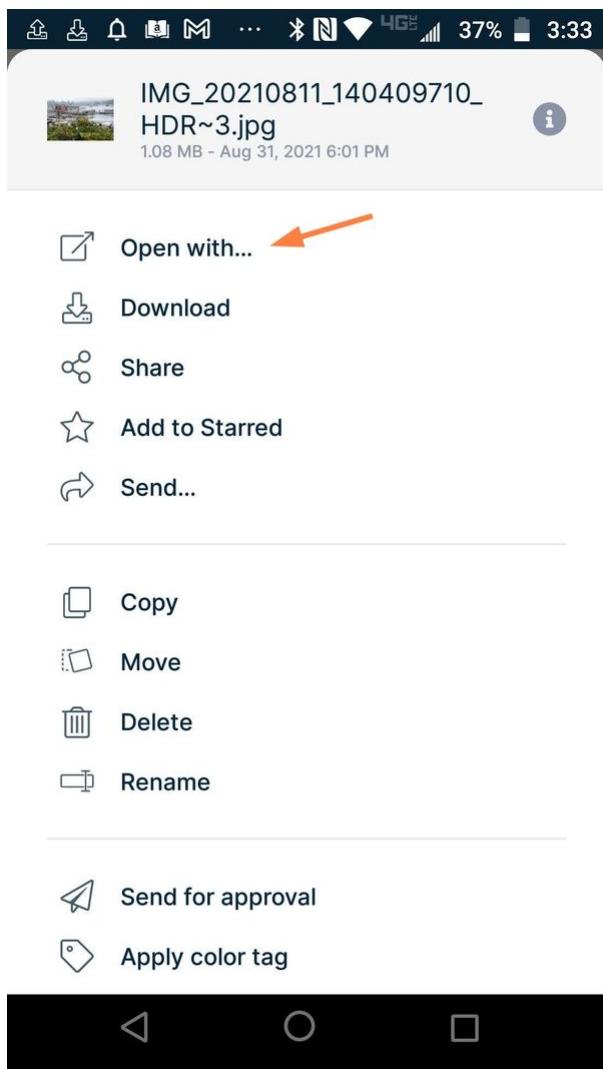

File types other than .pdf, .txt, and Office file types may be opened from FileCloud into a third-party application to edit, but they are actually being downloaded, and the edits are not automatically saved in FileCloud. To add the edits to your FileCloud copy of the file, you must manually upload the edited copy of the file into FileCloud.

- Open the FileCloud app, and navigate to the file that you want to edit.
- Tap the more (three dot) icon to the right of the file.

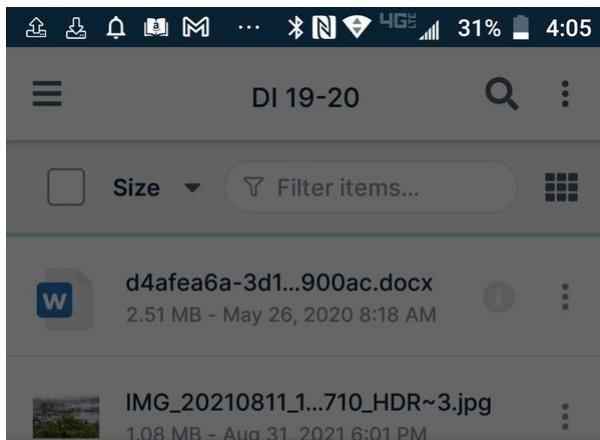

A list of options opens.

3. Tap **Open with**.

The screen displays apps available for opening the file either for viewing or editing:

Open with...

Photos

Pixlr

PRINT

4. Select one of the apps.

The file is downloaded from FileCloud and opened in the app.

After you edit and save the file, the changes are not saved to FileCloud.

5. Open FileCloud again and upload the edited file.

Share a File on Android

The following options are available for sharing:

- **Allow anyone with link** (Public Share). No FileCloud account required.
- **Anyone anyone with link and a password** (Protected Public Share). No FileCloud account required.
- **Allow selected users or groups** (Private share). Default. FileCloud account required. The shared files will appear in the **Shared with Me** folder.
- If the file is available for viewing in the Secure Web Viewer: **Allow anyone with Secure Web Viewer link and a password**. No FileCloud account required.

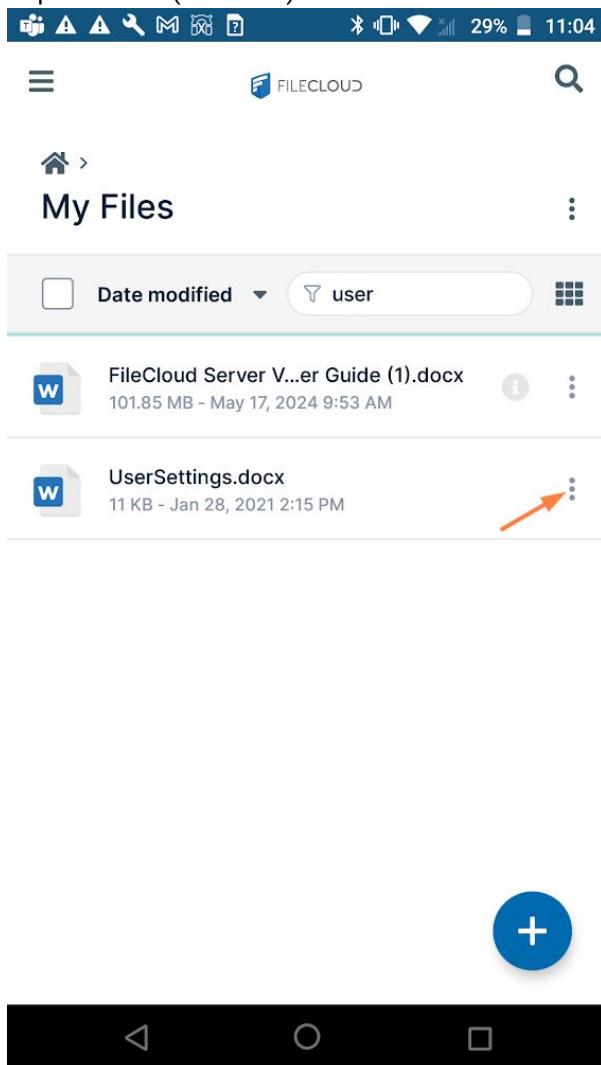

In addition, it is possible to control the access to the shared resource with read, write, or share permissions.

You can use the FileCloud app to share files on your mobile device with others. You can:

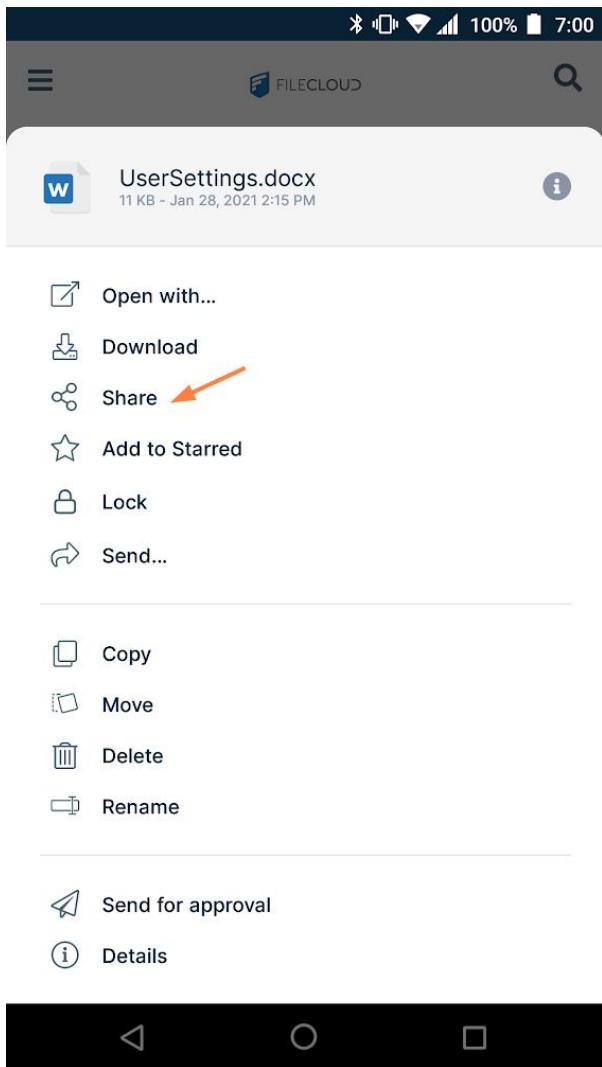

- Create a direct link to the file. This link can be sent via email to anyone who needs access to that resource.
- Add users and groups as share recipients to a private share.

To share a file:

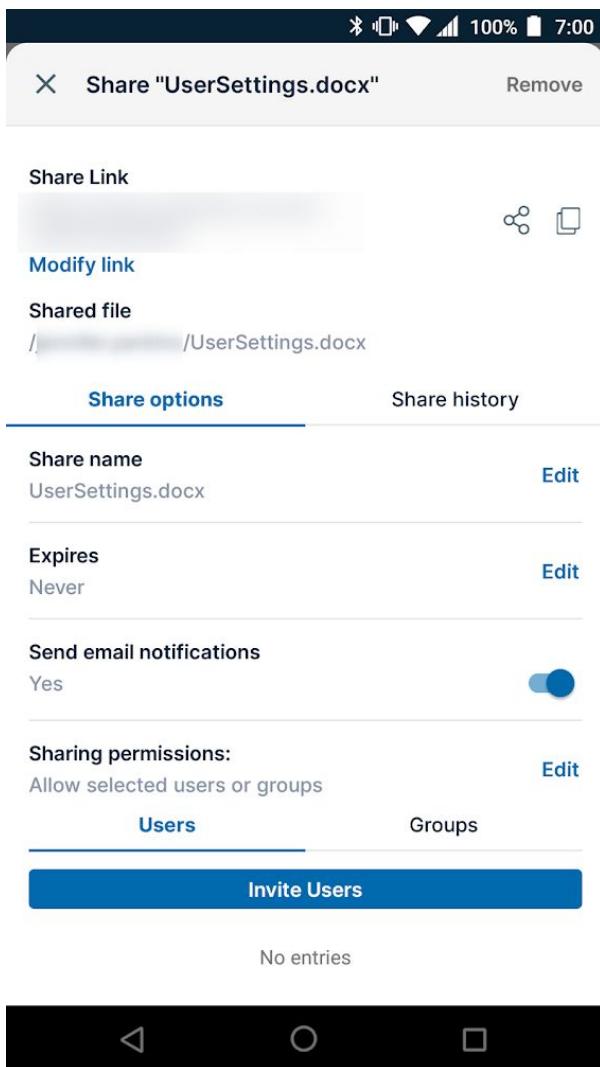

1. Open the FileCloud App.
2. Navigate to the file you want to share.
3. Tap the more (three dot) icon next to the file or folder.

4. Tap **Share**.

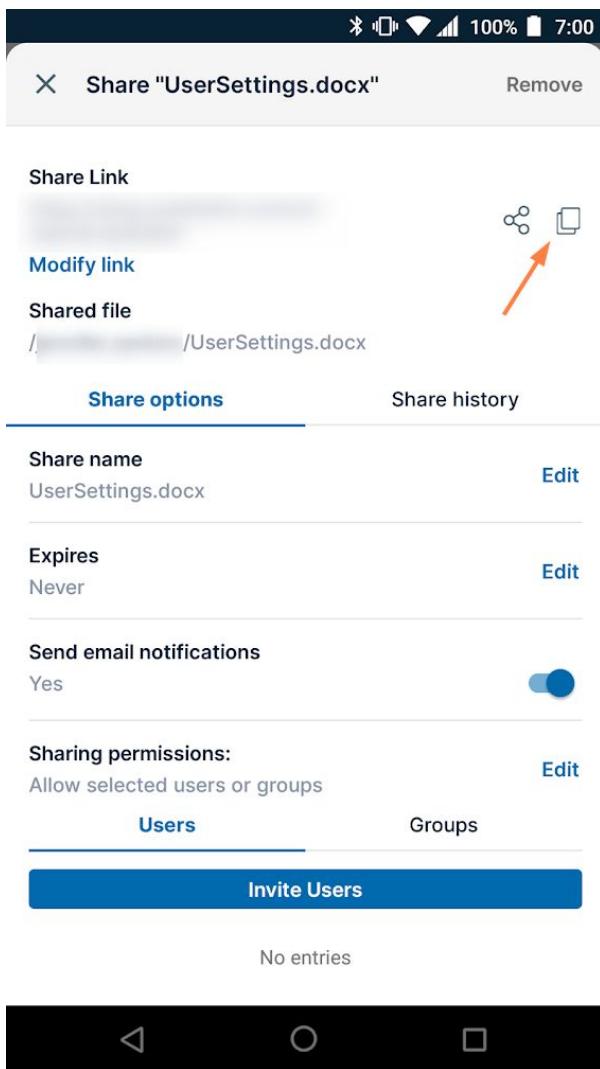

The file is automatically shared privately, and a screen for accessing share options and adding users and groups to the share opens.

To copy the share link:

To copy the file share link:

1. Tap the Copy icon.

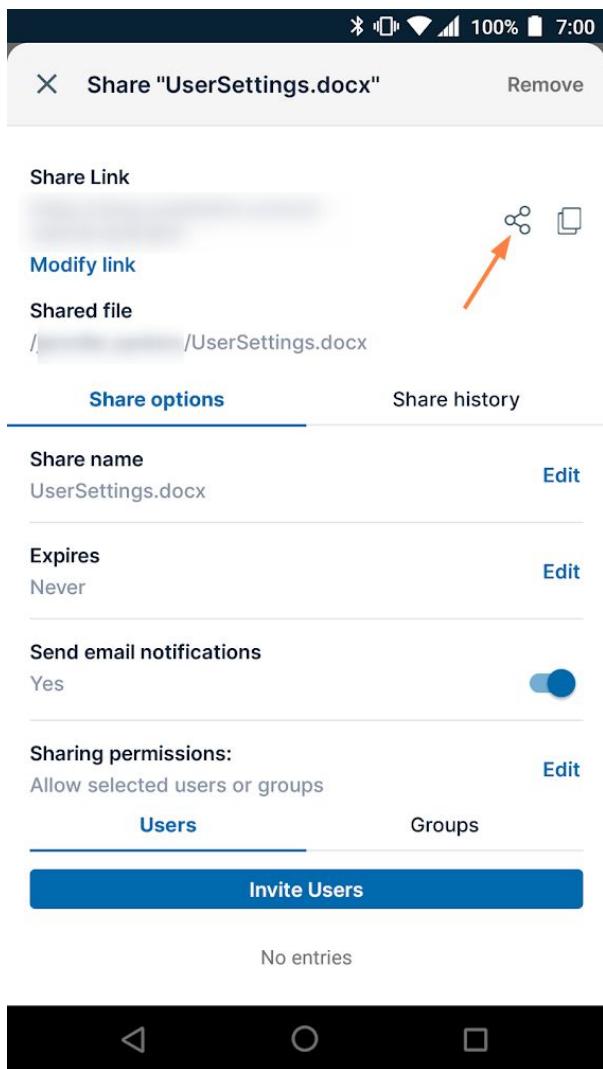

The screen displays the message **Link copied to clipboard**.

2. Paste the link into an email or text message and send it.

To share the share link:

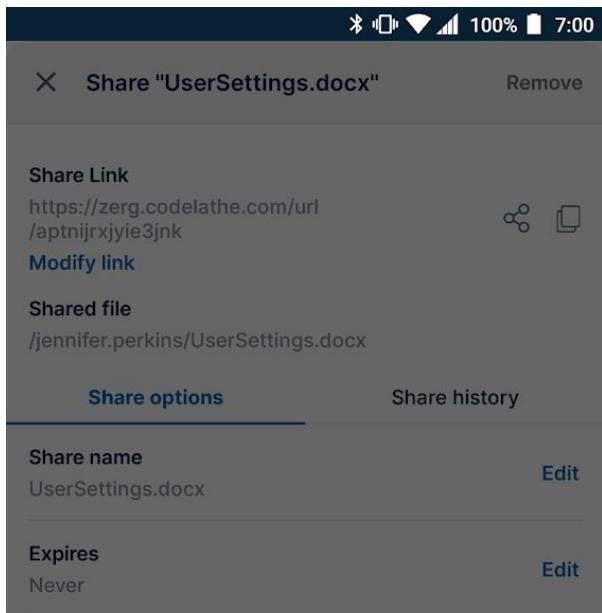

To share the file share link:

1. Tap the Share icon.

A **Share with** screen pops up.

2. Choose an app and share the link.

To add users to a private share:

To add a user to a private share:

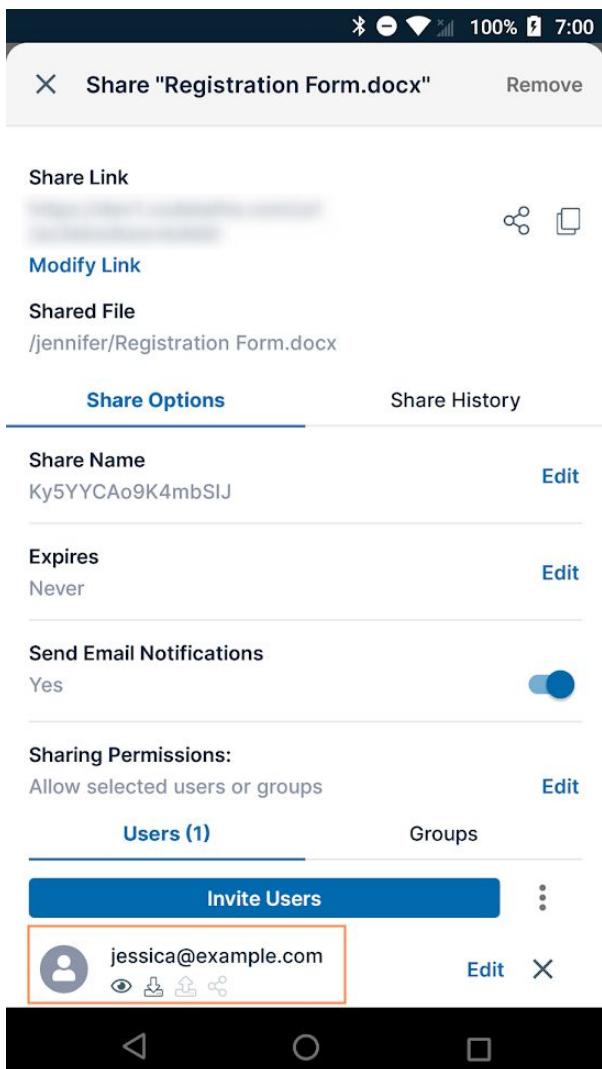

1. Tap **Invite Users**.

2. In the **Invite users to this share** popup, enter a user's email address or account name, and tap the name to add it.
If the user you enter does not have an account, a message informs you whether or not, depending on your system settings, a new account will automatically be created for the user.
3. Add any number of users.
4. Uncheck **Send email** if you do not want to send users an email informing them about the share.
Click **Edit** across from **Send email** to customize the email sent to users.
5. Once you have finished adding users, tap **Add Users to this Share**.

The users are added to the share:

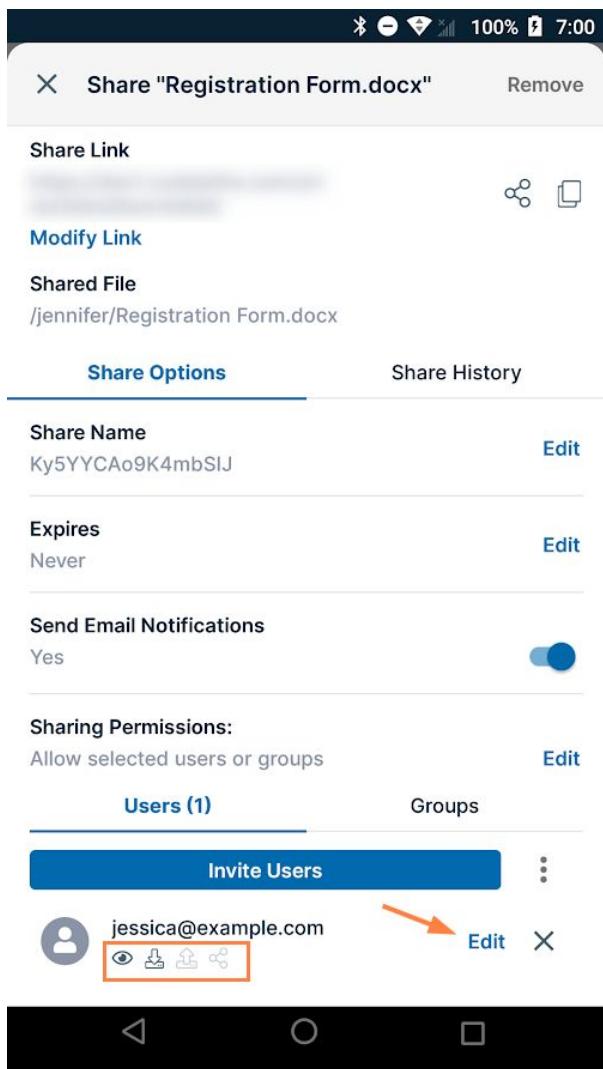

To change a user's private share permissions:

When you privately share a file with a user, the user's permissions for the file are shown in icons below the username or email. By default, the user has view and download permissions for the file. You can also give the user upload and share permissions, and if it is allowed in your system, sync permission. Other settings in FileCloud affect which permissions are available.

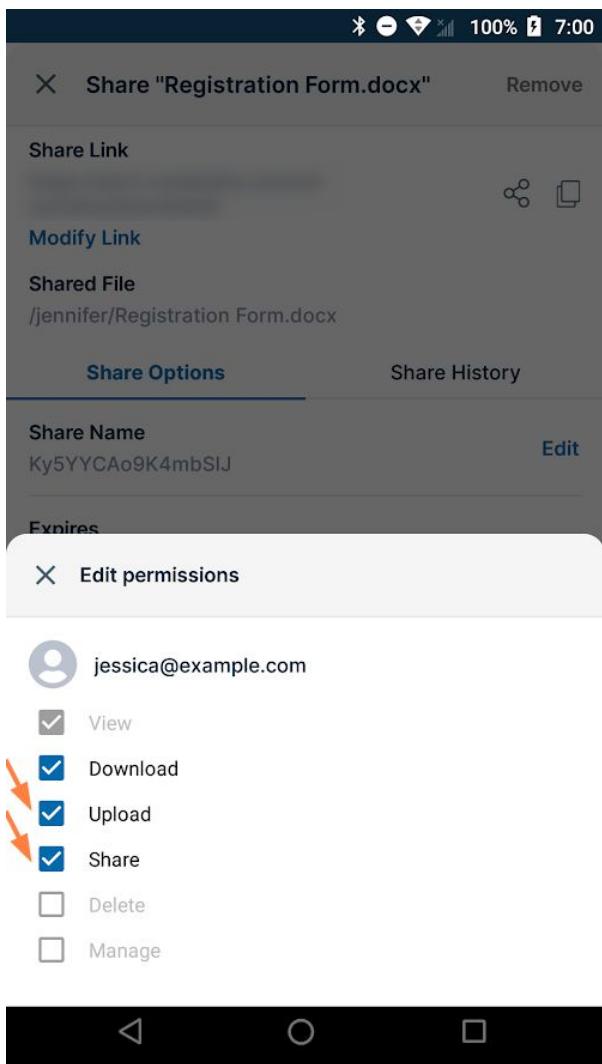

To change the user's permissions for the file:

1. Across from the user's name or email, tap **Edit**.

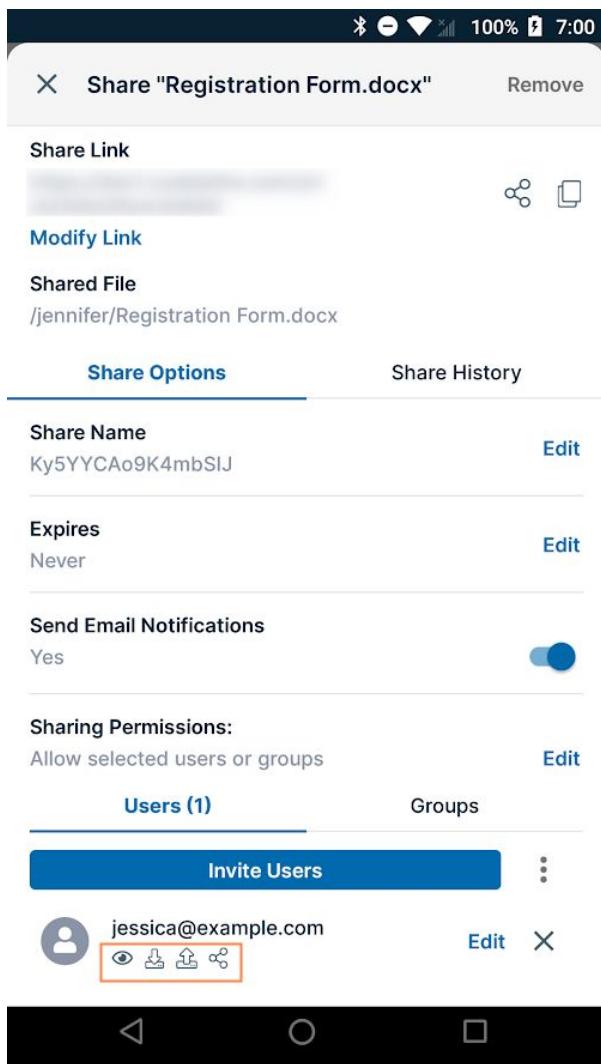

A popup shows the available permissions.

2. Check or uncheck permissions.

3. Close the **Edit permissions** box.
The changes appear in the permissions icons.

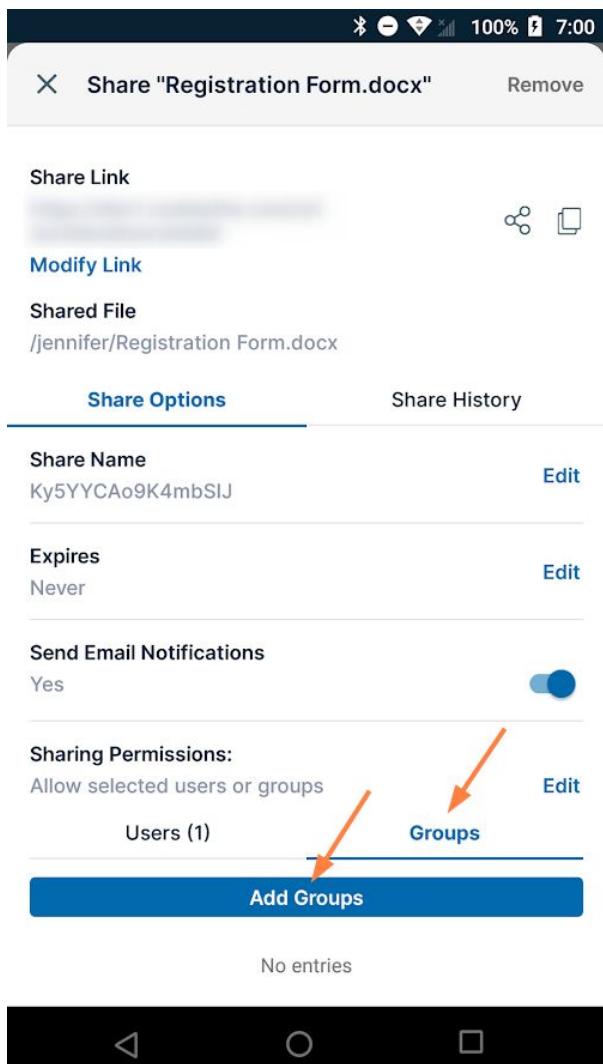

Note: Checking **Share** permission gives the group both upload and share permissions for the file.

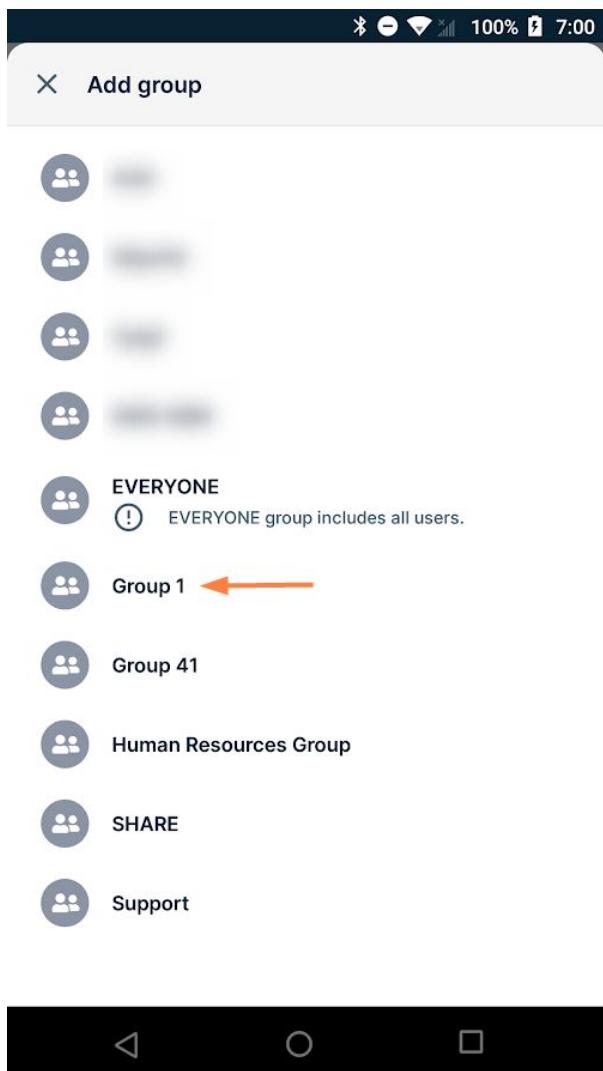

To add groups to a private share:

To add a group to a private share:

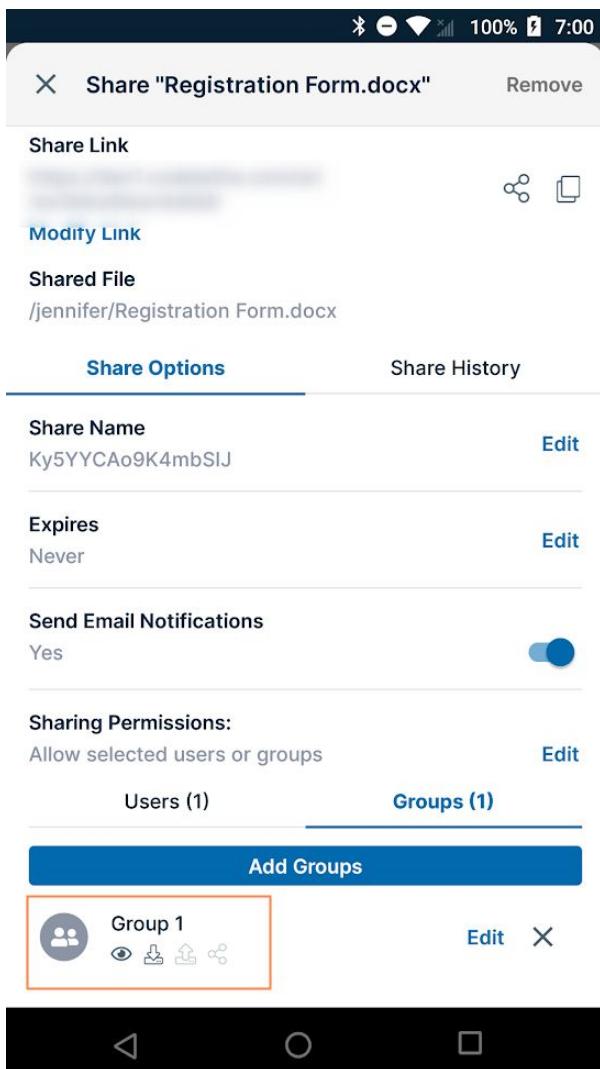

1. Tap the **Groups** tab and then tap **Add Groups**.

2. Tap a group that you want to add to the share.

The group is added to the share:

3. Add any number of the groups to the share.

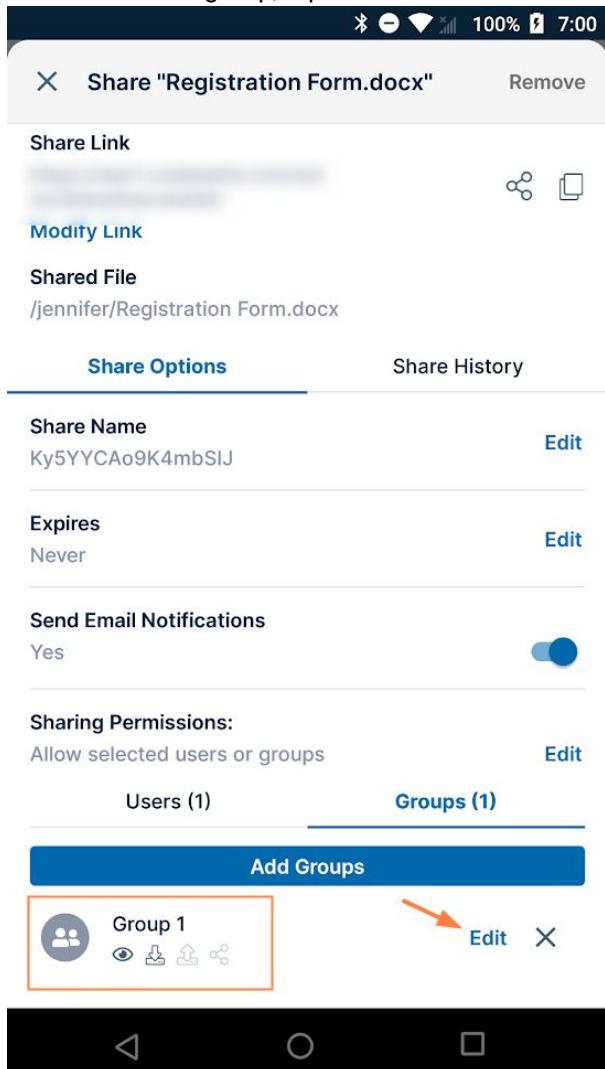

To change a group's private share permissions.

When you privately share a file with a group, the group's permissions for the file are shown in icons below the group name. By default, the members of the group have view and download permissions for the file.

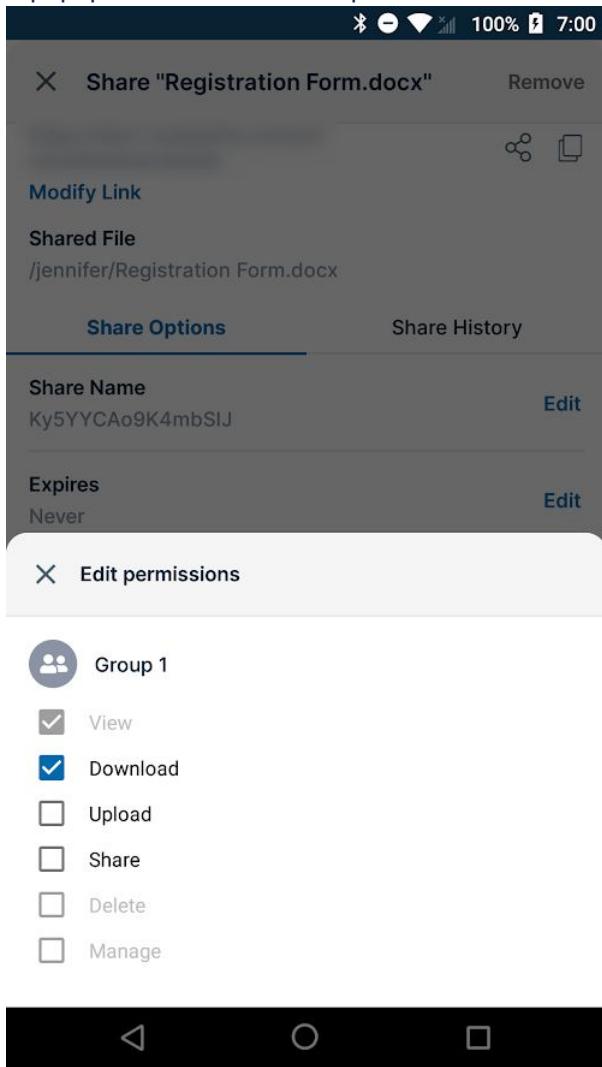

You can also give the group upload and share permission, and if it is allowed in your system, sync permission. Note that other settings in FileCloud affect which permissions are available.

To change the group's permissions for the file:

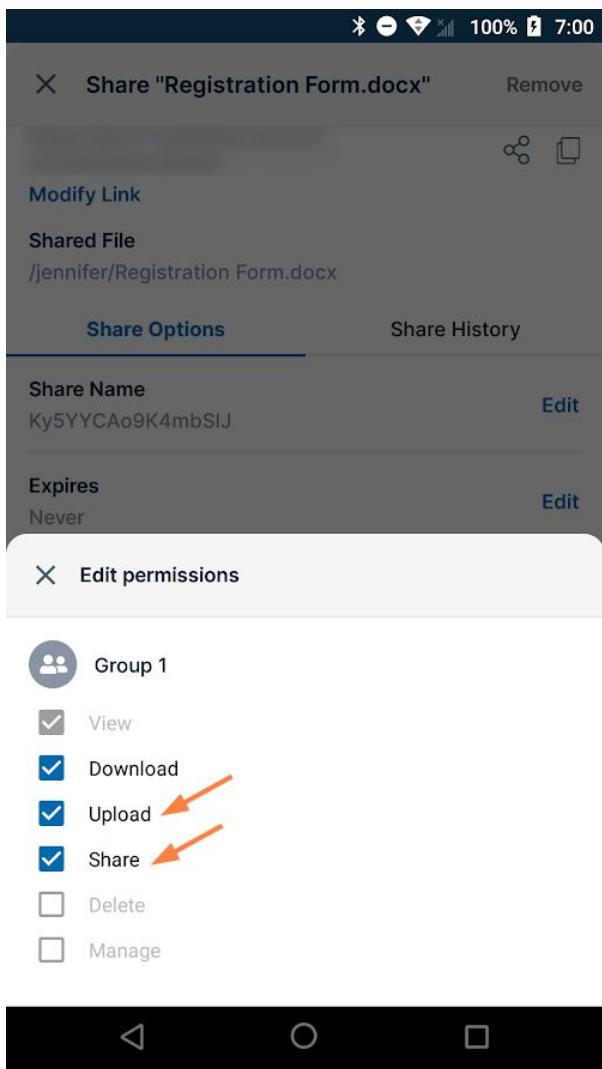

1. Across from the group, tap **Edit**.

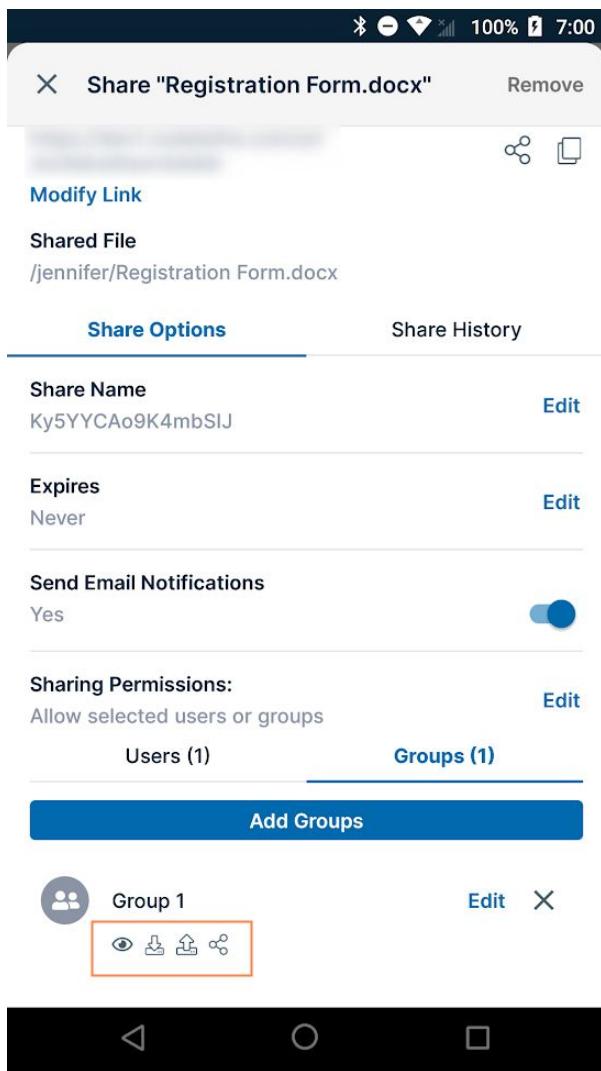

A popup shows the available permissions.

2. Check or uncheck permissions:

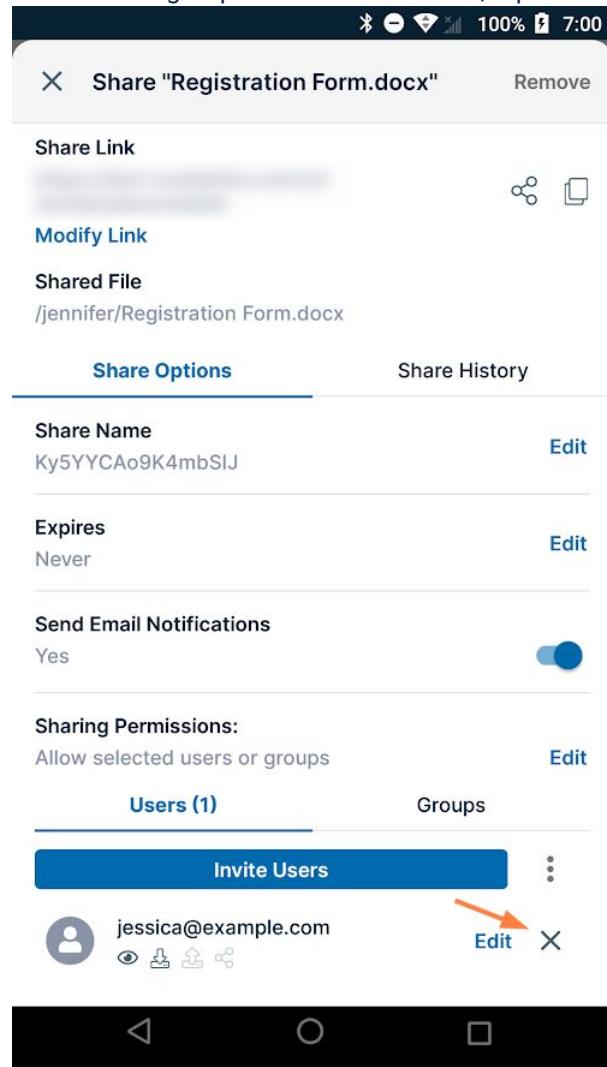

3. Close the **Edit permissions** box.
The changes appear in the permissions icons.

Note: Checking **Share** permission gives the group both upload and share permissions for the file.

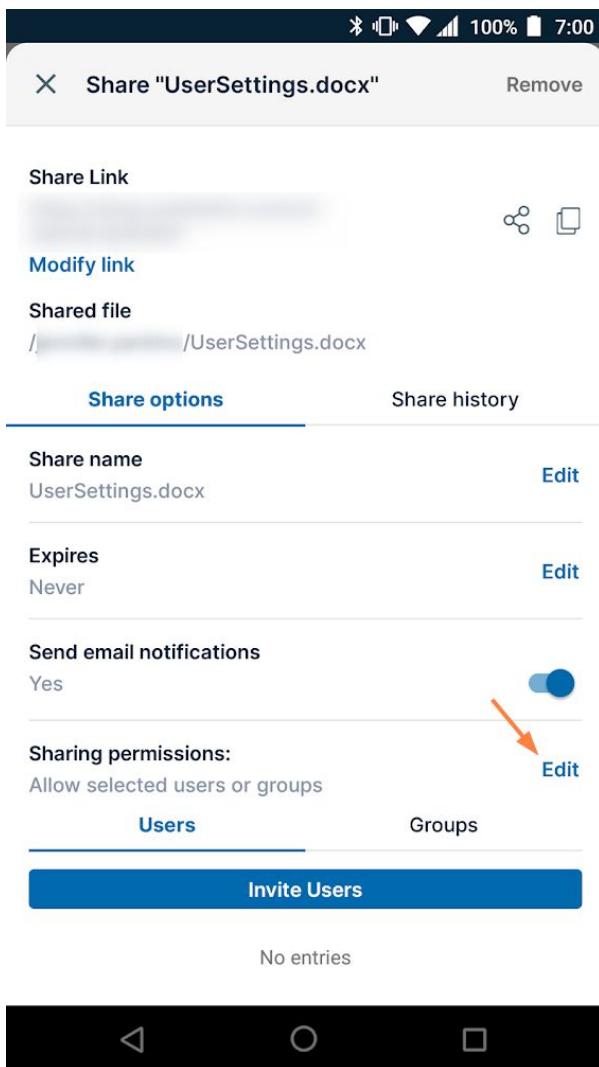

To remove a user or group from a share

To remove a group or user from a share, tap the x next to it:

To change a share from private to public:

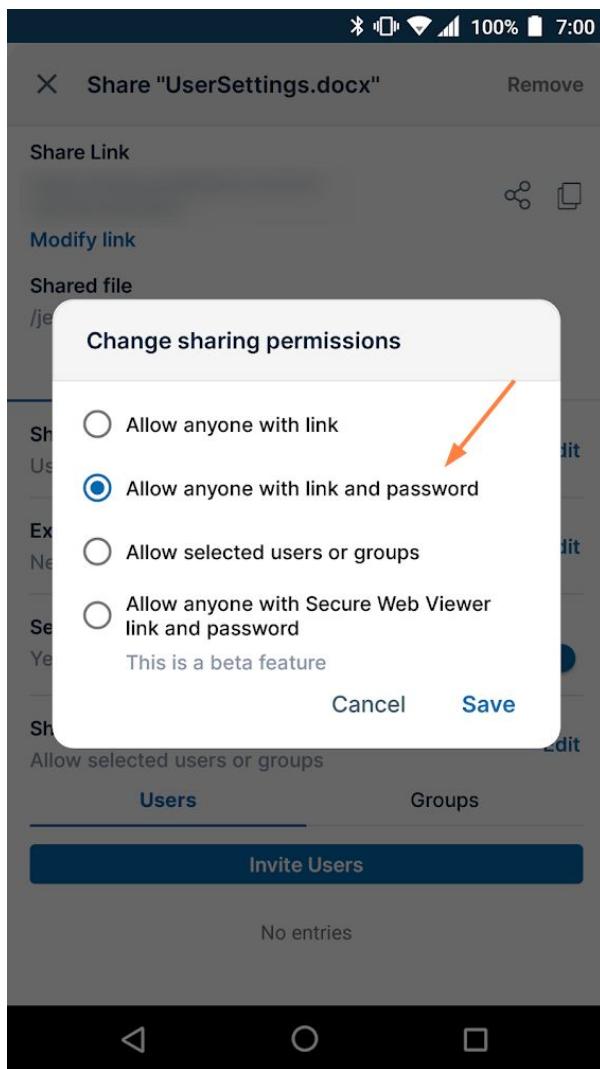

1. In **Sharing Permissions**, tap **Edit**.

2. If you don't want to require users to enter a password to access the share, choose **Allow anyone with link**.

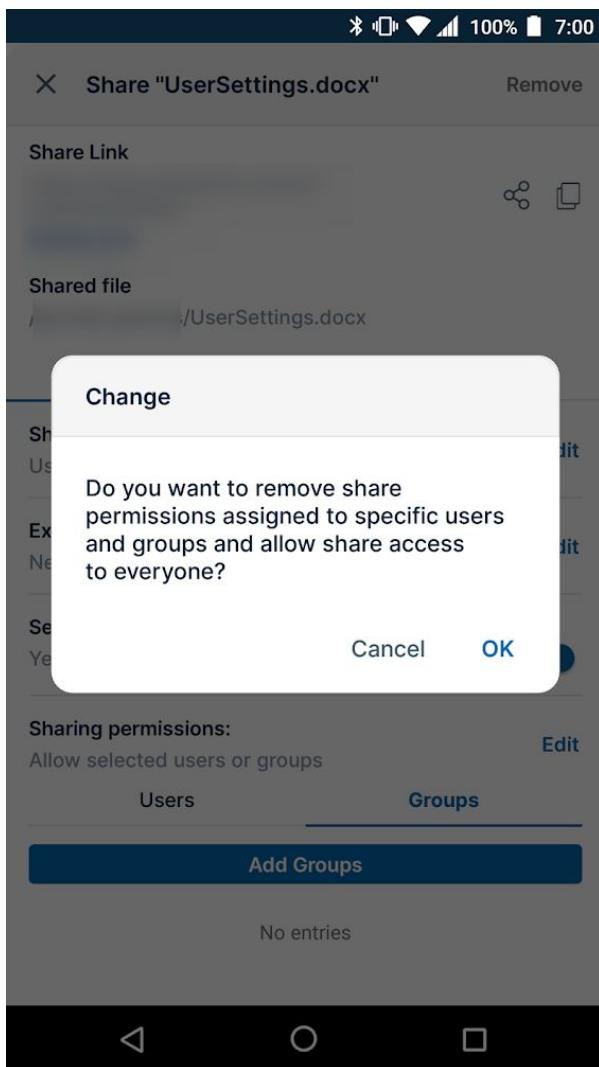

If you want to require users to enter a password to access the share, choose **Allow anyone with link and a password**.

Here, we'll choose **Allow anyone with link and a password**, and tap **Save**.

A confirmation dialog asks you to confirm that you want to remove share permissions for specific users and groups and allow share access to everyone.

3. Tap **OK**.

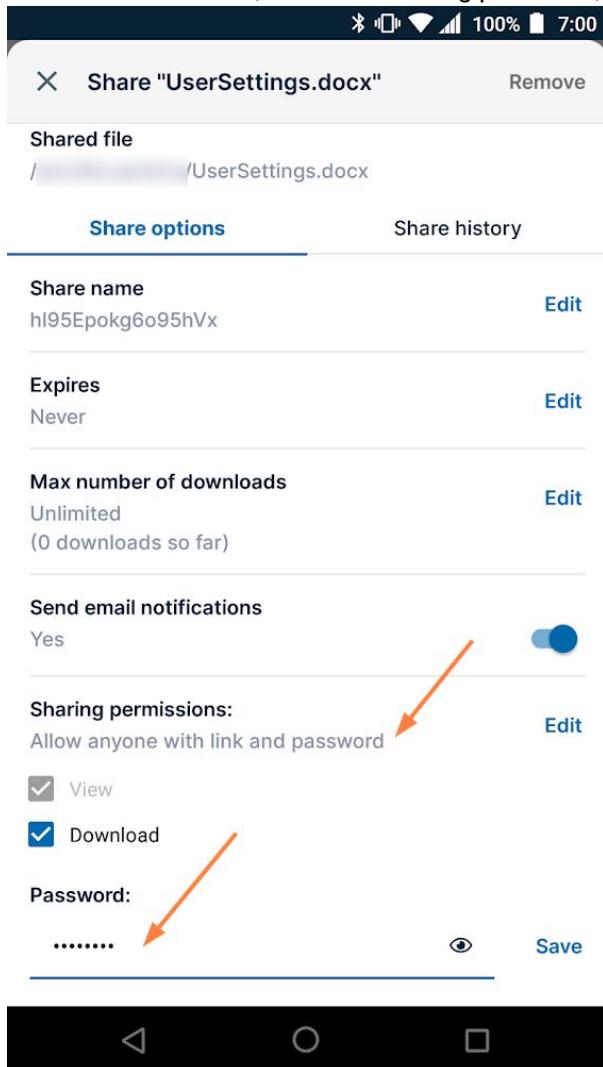

Allow anyone with link and password replaces **Allow selected users or groups**.

Note: If the option **Allow anyone with Secure Web Viewer link and a password** appears, the file is available for viewing in the Secure Web Viewer, which protects files with digital rights management (DRM) features. See [Using the Secure Web Viewer⁷](https://www.filecloud.com/supportdocs/display/FCDOC/.Using+the+Secure+Web+Viewer+v23.232) for help with this option.

7. <https://www.filecloud.com/supportdocs/display/FCDOC/.Using+the+Secure+Web+Viewer+v23.232>

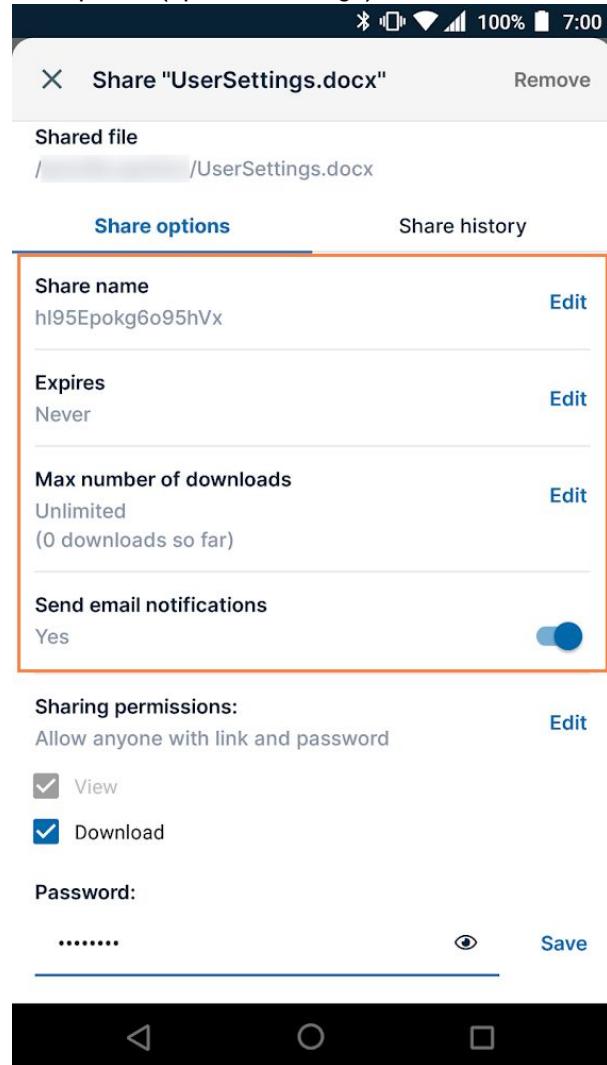

4. In the **Password** field, leave the existing password, or enter another one, and then click **Save**.

Users must now enter the password to access the share from the link.

To change share options:

The options (optional settings) for a share are listed under **Share Options**.

For information on setting share options, see:

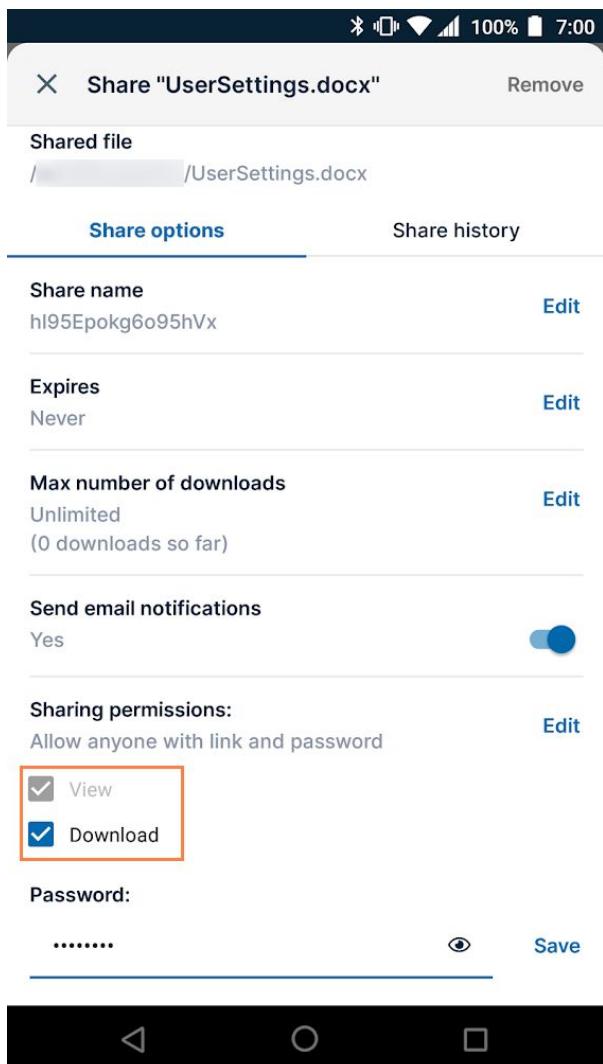

- Public Share Options for Files
- Private Share Options for Files

To change the permissions on a public share:

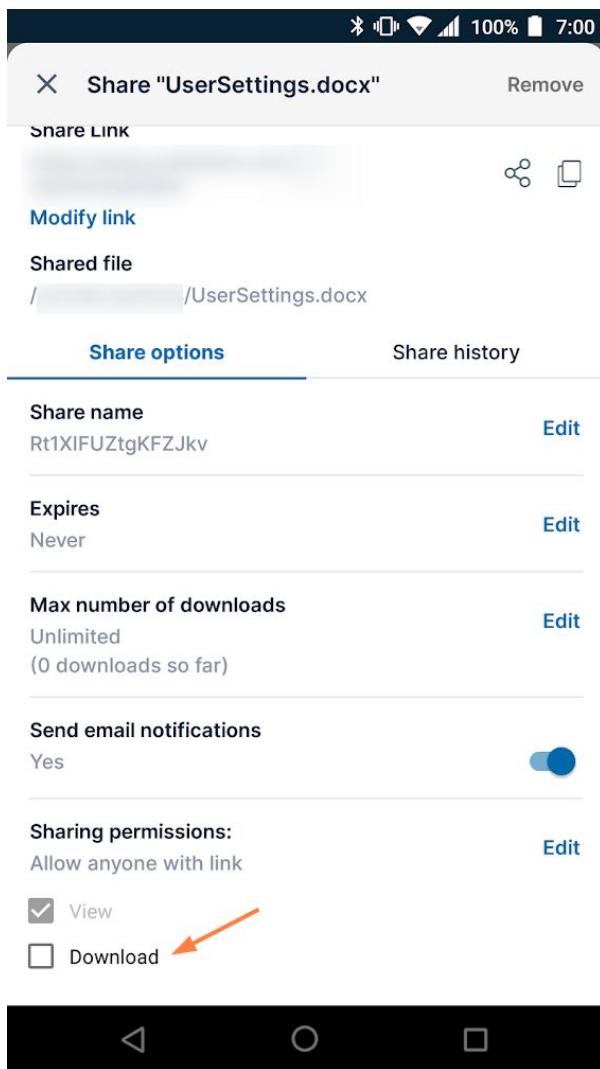

The permissions for a public share are listed under **Sharing Permissions**. The default permissions are **View** and **Download**, but you may remove **Download** permission.

To change the permissions on a public share:

1. Under **Sharing Permissions**, both **View** and **Download** are checked.
You cannot remove **View** permission.

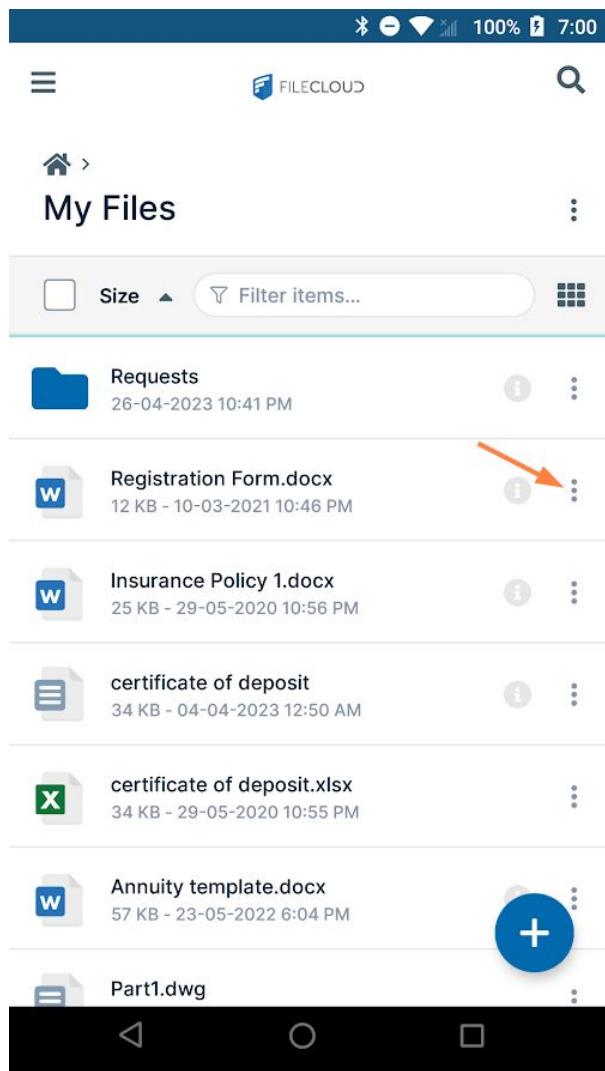

2. Uncheck **Download**.

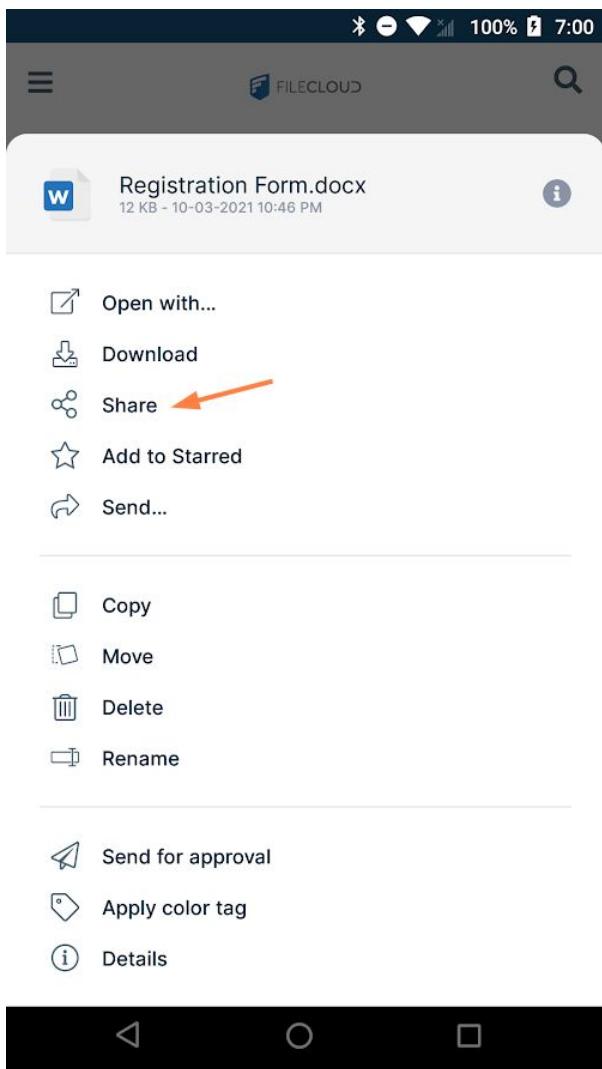

To remove a share:

You can remove a share of a file if you have created the share.

1. Open the FileCloud app.
2. Navigate to the file whose share you want to remove.
3. Tap the more (three dot) icon next to the file or folder.

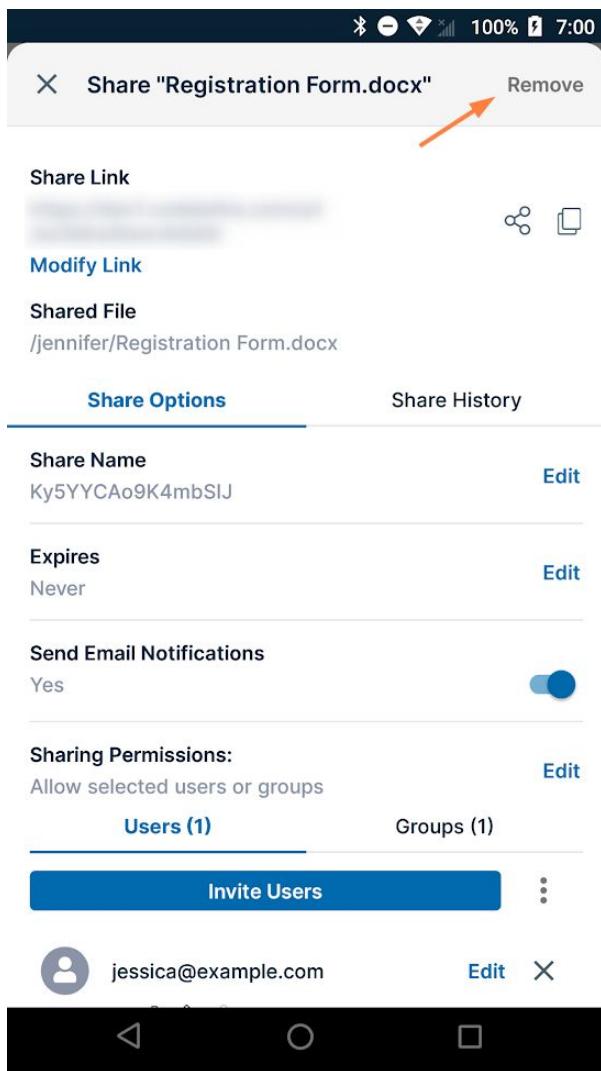

4. Tap **Share**.

The share details open.

5. Tap **Remove**.

The share is removed. Users who were given access to the share can no longer view it in their **Shared with me** files or access it through the share link.

To share folders on Android, see [Share a Folder on Android \(see page 372\)](#).

For more detailed information about file and folder shares, see [Sharing Files and Folders](#).

Share a Folder on Android

A folder can be shared with:

- **Allow anyone with link** (Public Share). No FileCloud account required.
- **Anyone anyone with link and a password** (Protected Public Share). No FileCloud account required.

- **Allow selected users or groups** (Private share). Default. FileCloud account required. The shared folder appears in the **Shared with Me** folder.

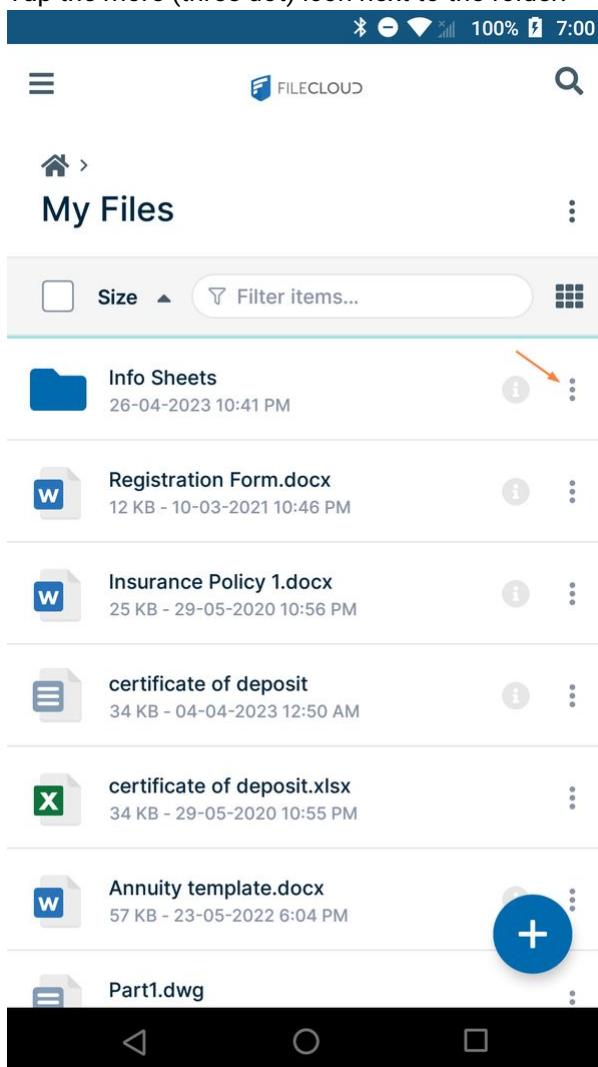

In addition, it is possible to control the access to the shared resource with read, write, or share permissions.

You can use the FileCloud app to share folders on your mobile device with others. You can:

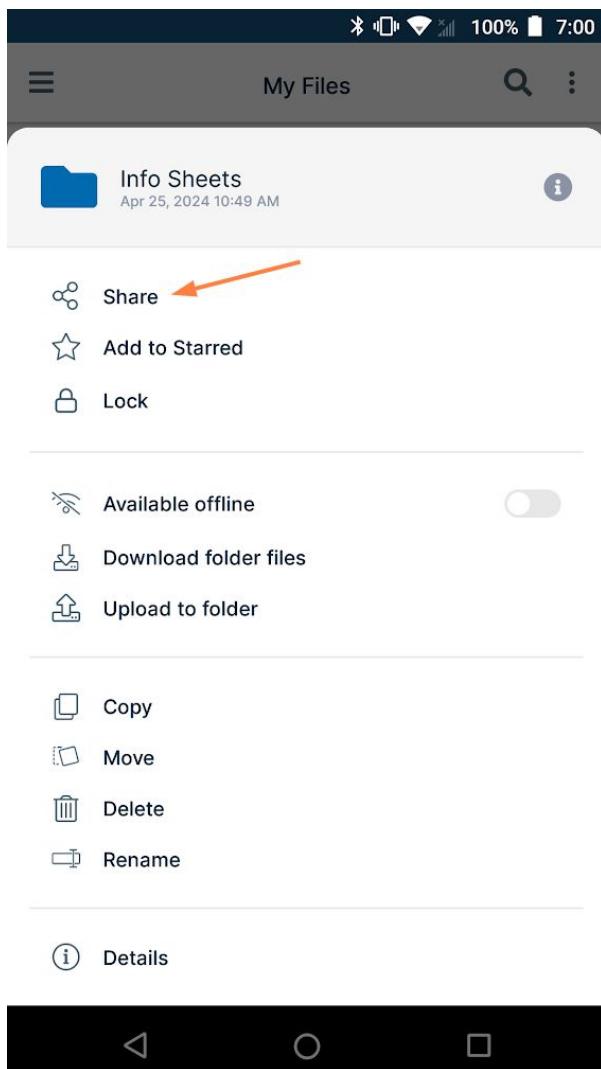

- Create a direct link to the folder. This link can be sent via email to anyone who needs access to that resource.
- Add users and groups as share recipients to a private share.

To share a folder:

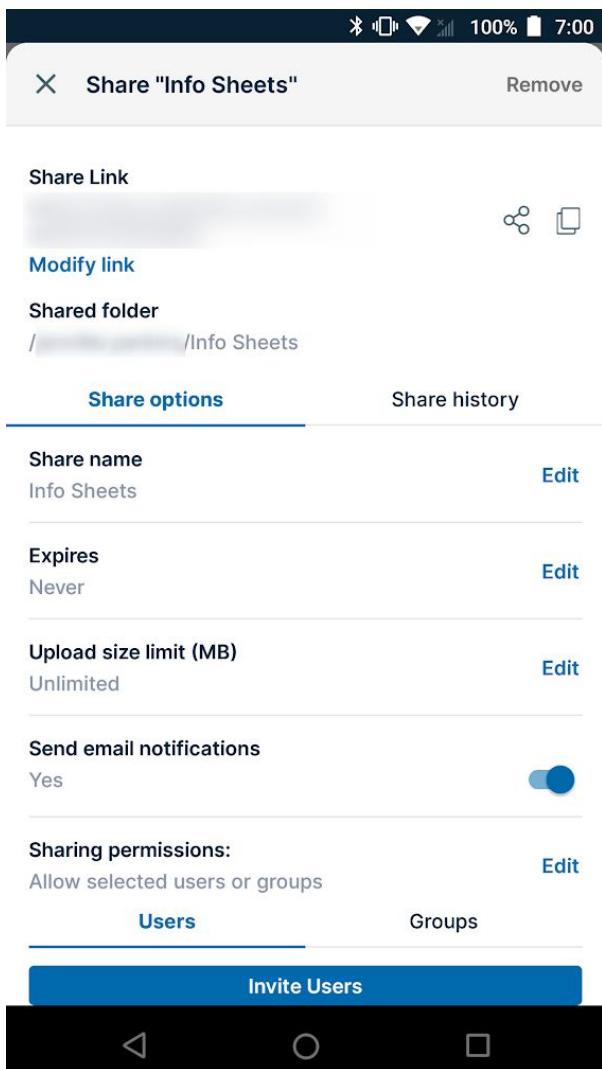

1. Open the FileCloud App.
2. Navigate to the folder you want to share.
3. Tap the more (three dot) icon next to the folder.

4. Tap **Share**.

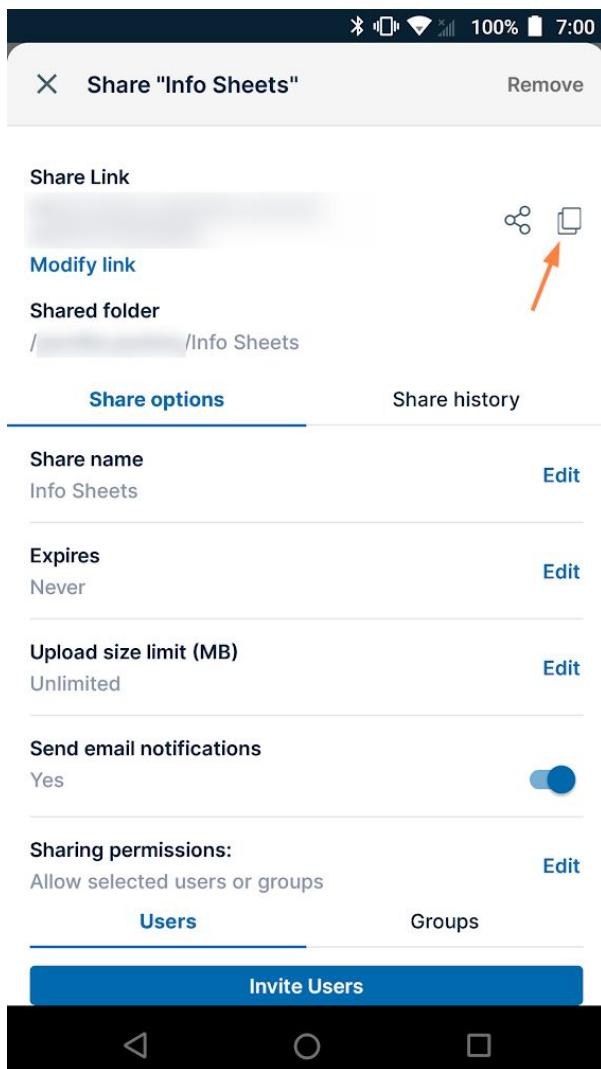

The folder is automatically shared privately, and a screen for accessing share options and adding users and groups to the share opens.

To copy the share link:

To copy the file share link:

1. Tap the Copy icon.

2. Paste the link into an email or text message and send it.

To share the share link:

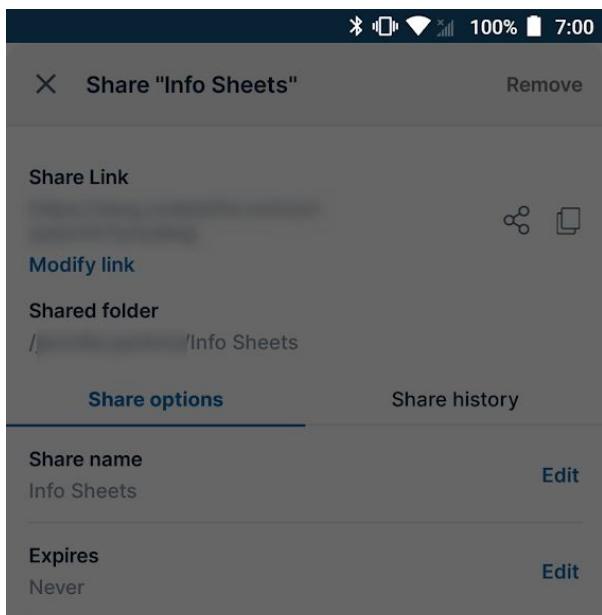

To share the file share link:

1. Tap the Share icon.

A **Share with** screen pops up.

2. Choose an app and share the link.

Use a different app

FileCloud

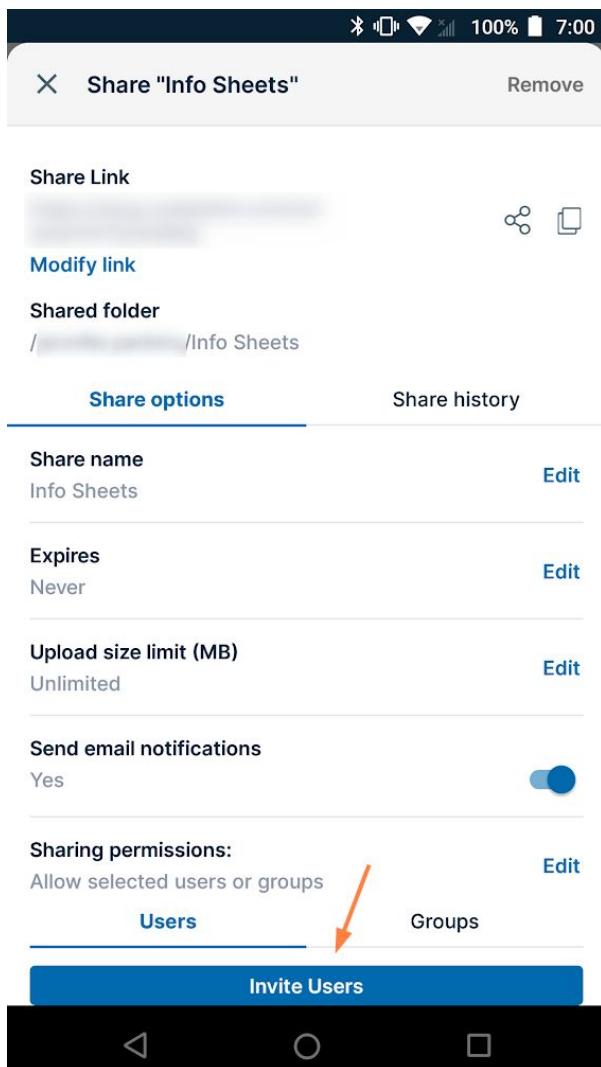

Teams

To add users to a private share:

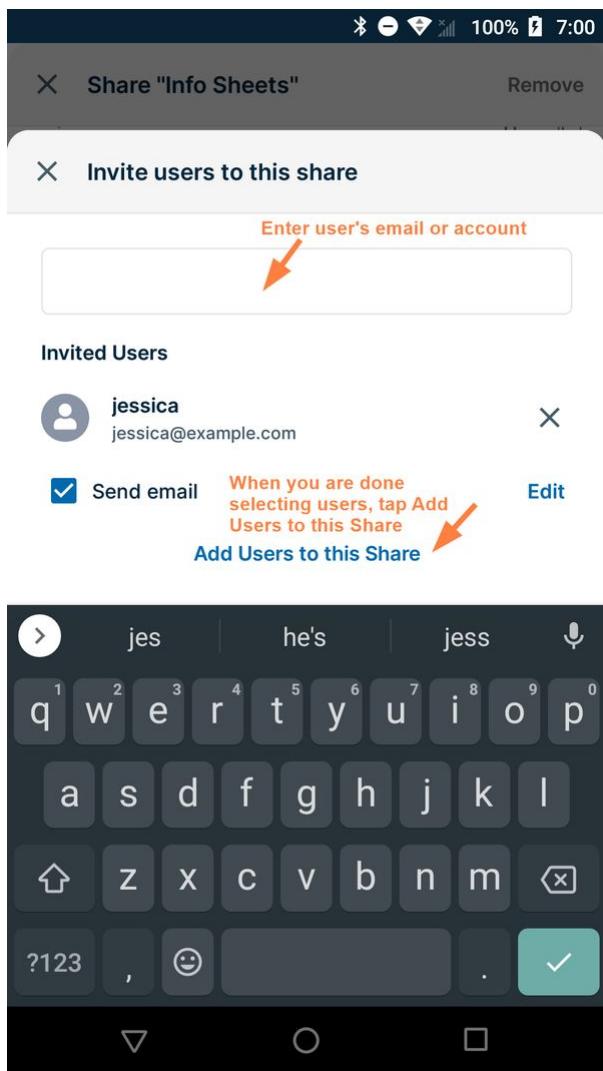

To add a user to a private share:

1. Tap **Invite users**.

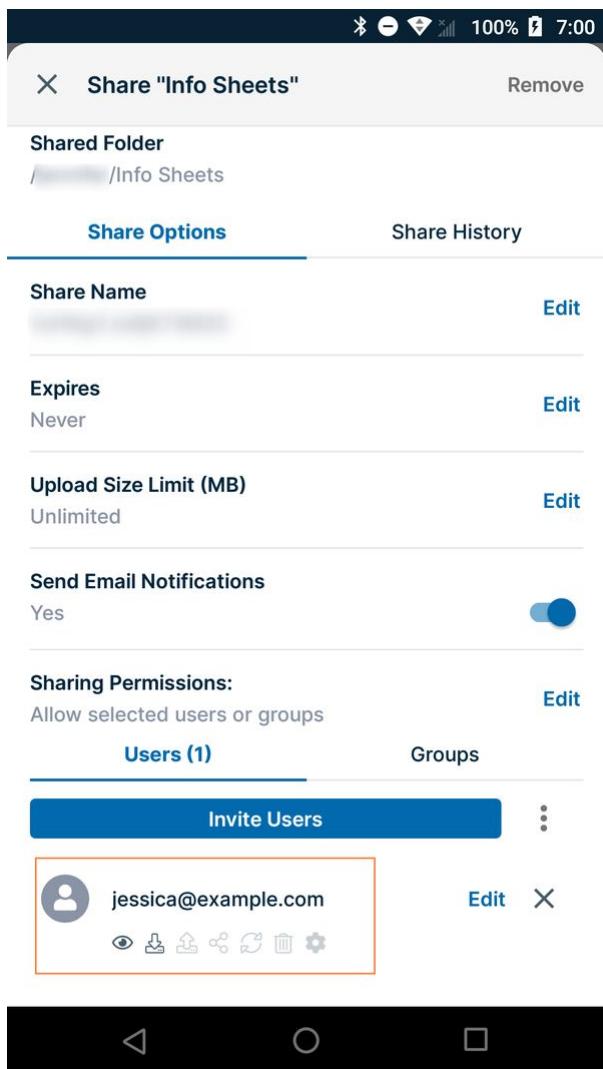

2. Enter a username or email that exists in your system, or enter a new user's email, and tap **Add Users to this Share**.

If you enter a new user, FileCloud sends them an email with the share link and asks them to create a FileCloud account to access the link.

The user is added to the share.

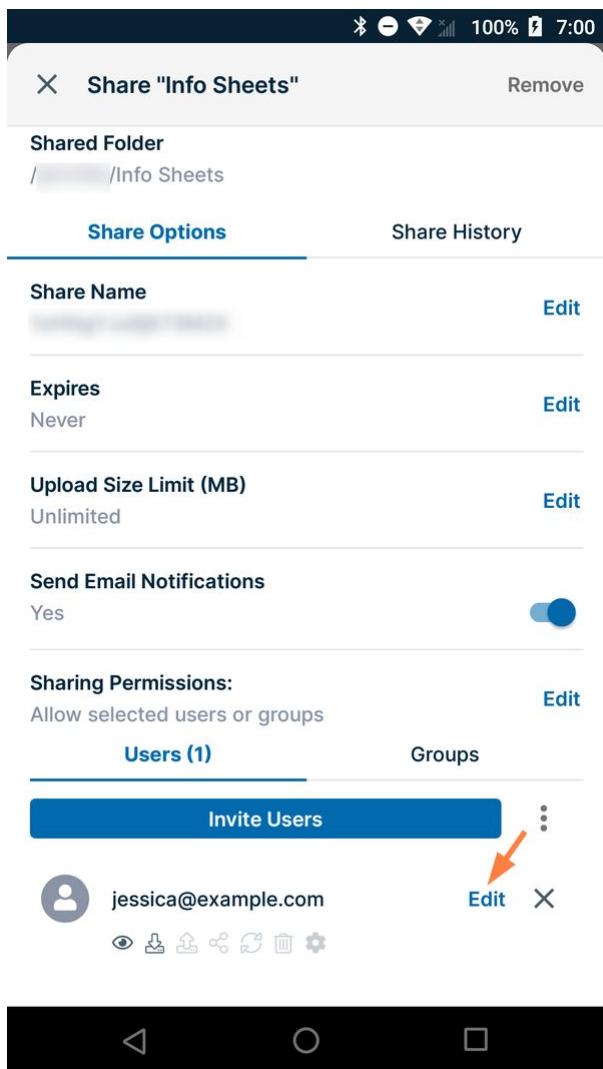

To change a user's private share permissions:

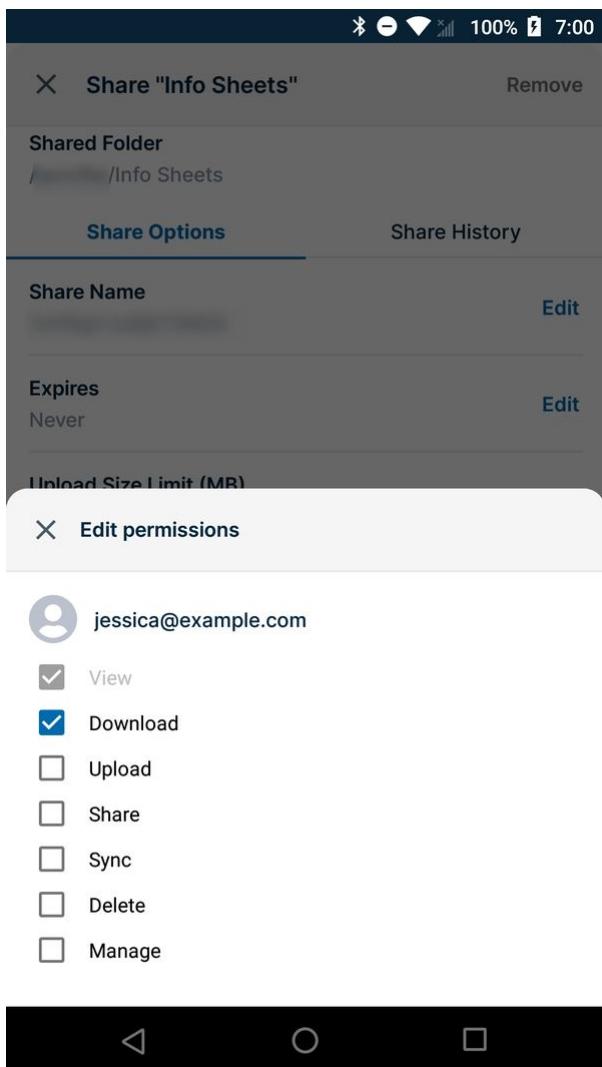

When you privately share a folder with a user, the user's permissions for the folder are shown in icons below the username or email. By default, the user has view and download permissions for the folder. You can also give the user upload and share permissions, and if it is allowed in your system, sync permission.

To change the user's permissions for the folder:

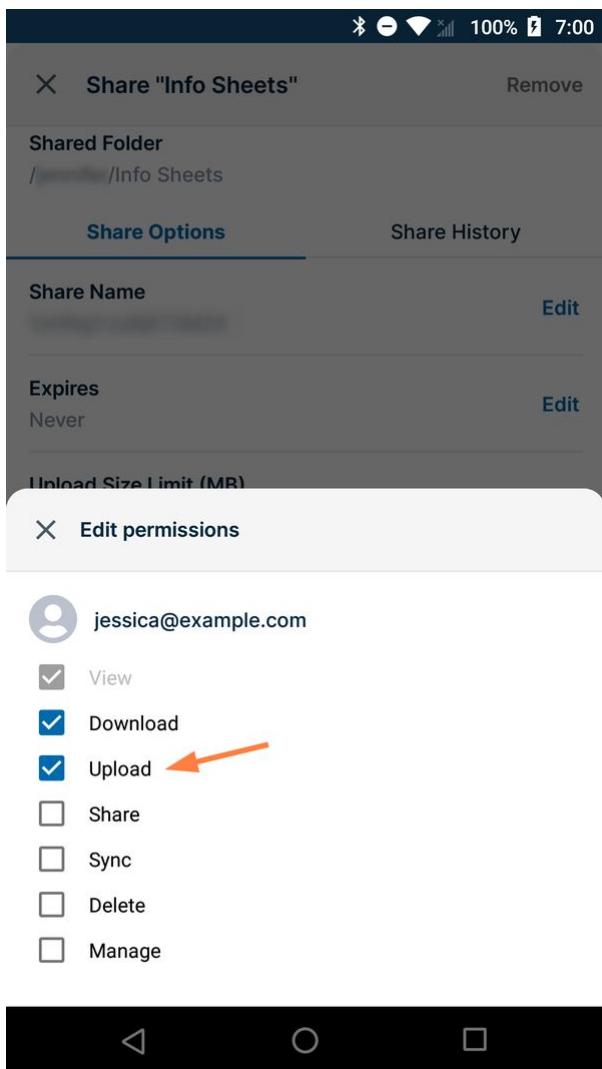

1. Tap **Edit** across from the user's name or email:

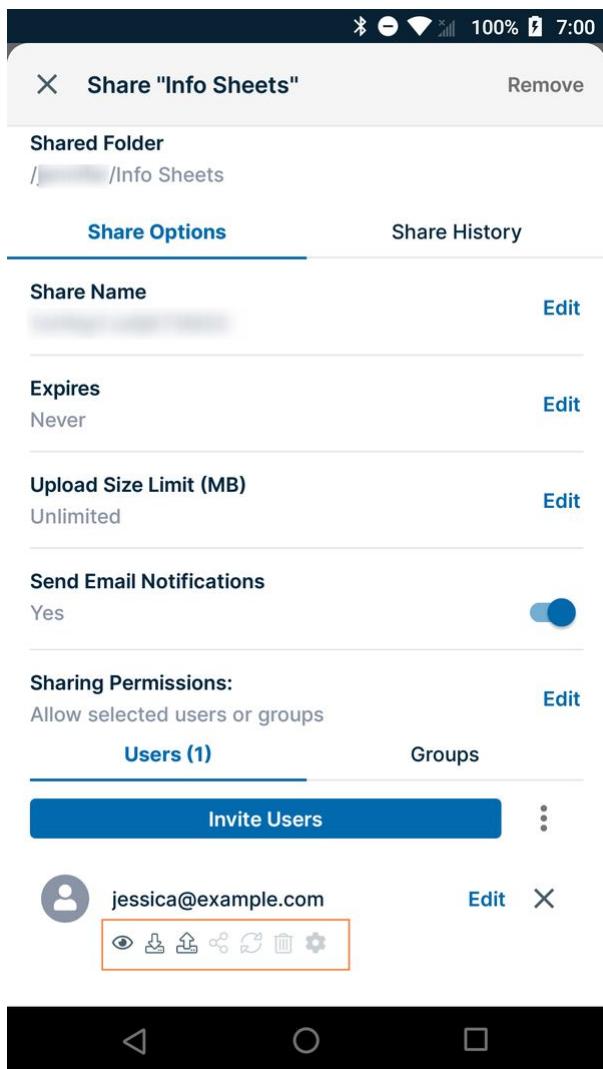

A popup shows the available permissions.

2. Check or uncheck permissions:

3. Close the **Edit permissions** box.
The changes appear in the permissions icons:

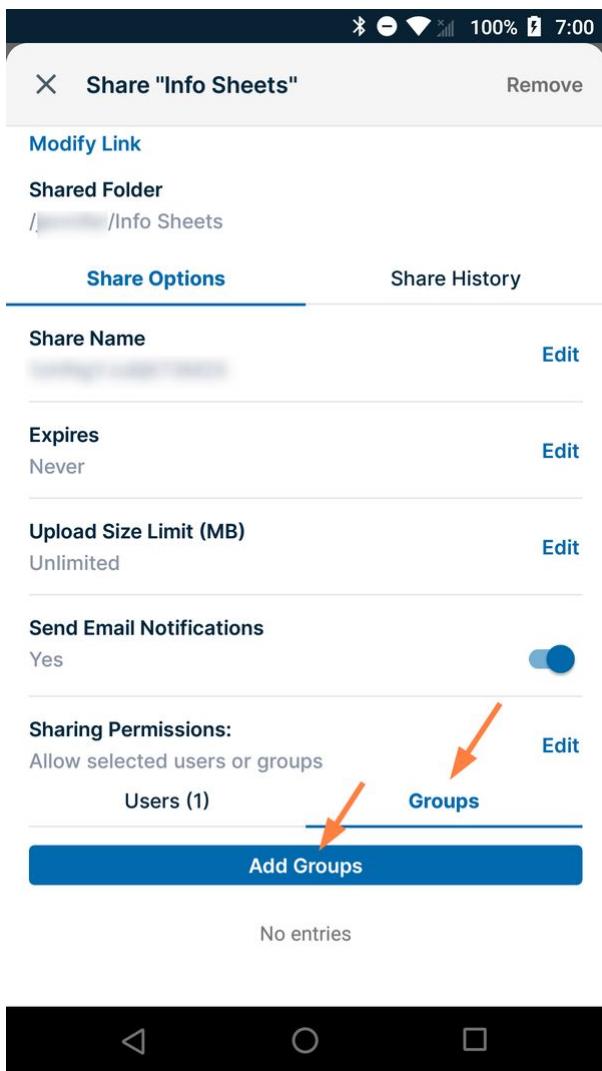

Note: Checking **Share** permission gives the user both upload and share permissions for the folder.

To add groups to a private share:

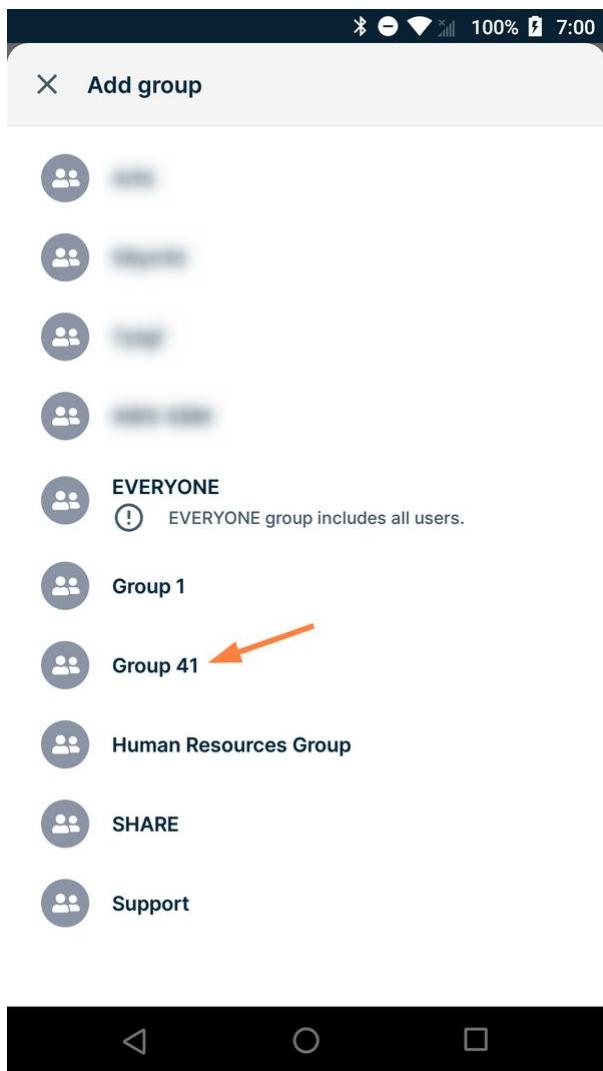

To add a group to a private share:

1. Tap the **Groups** tab.
2. Tap **Add Groups**.

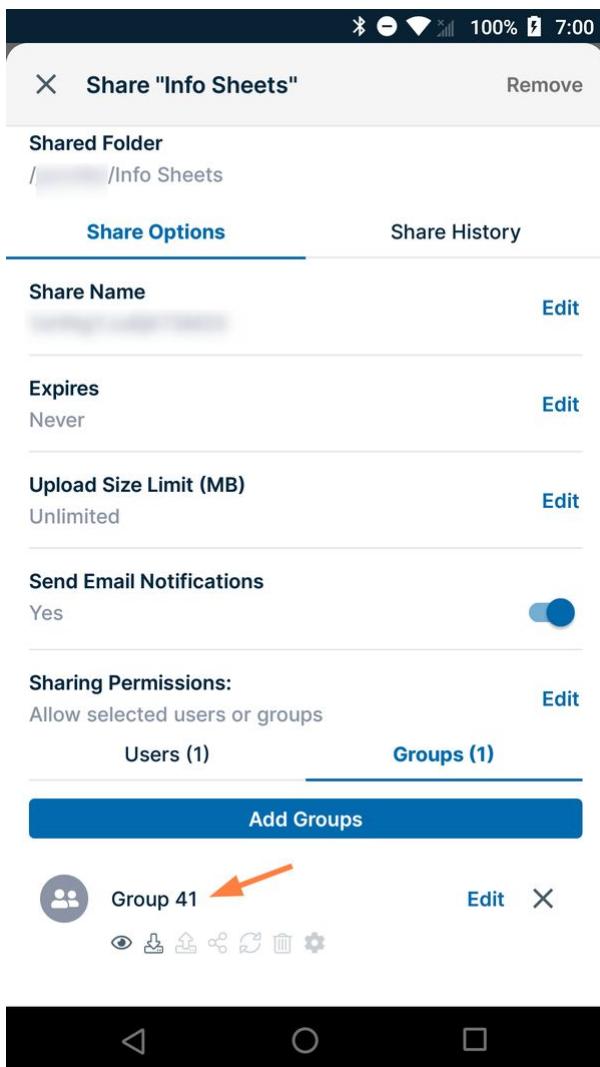

The groups that are available for you to add to the share appear.

3. Tap a group to add it to the share.

The group is added to the share:

4. Add any number of the groups to the share.

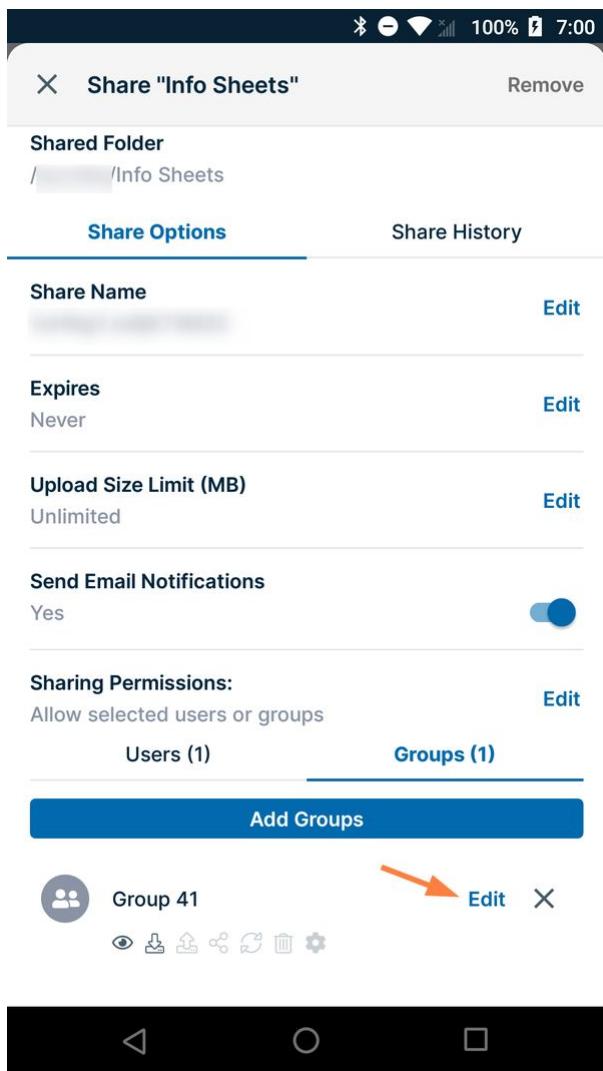

To change a group's private share permissions.

When you privately share a folder with a group, the group's permissions for the folder are shown in icons below the group name. By default, the members of the group have view and download permissions for the folder.

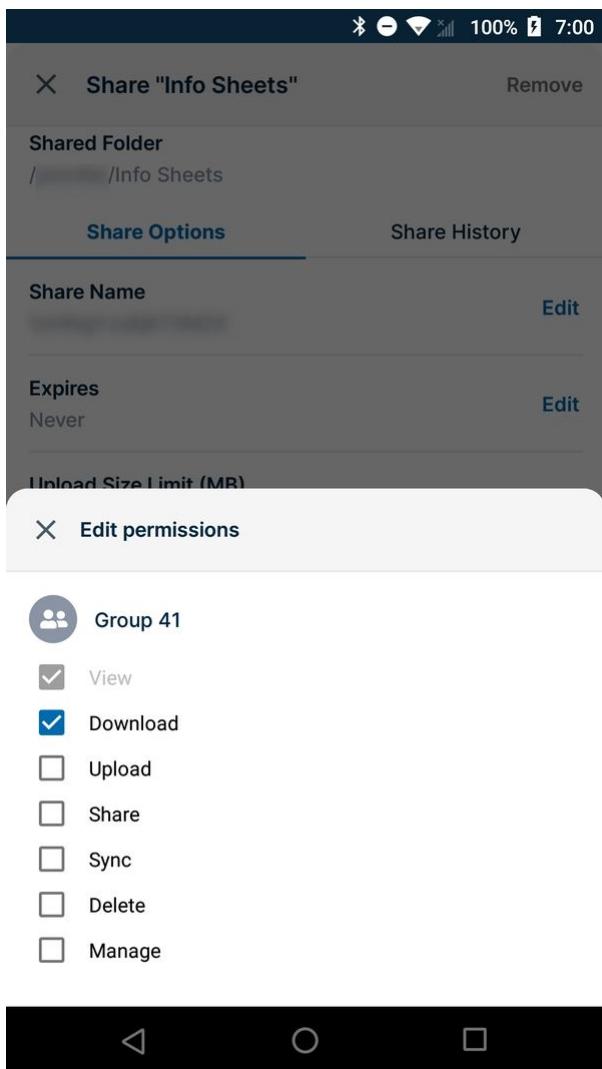

You can also give the group upload and share permissions, and if it is allowed in your system, sync and delete permissions.

To change the group's permissions for the folder:

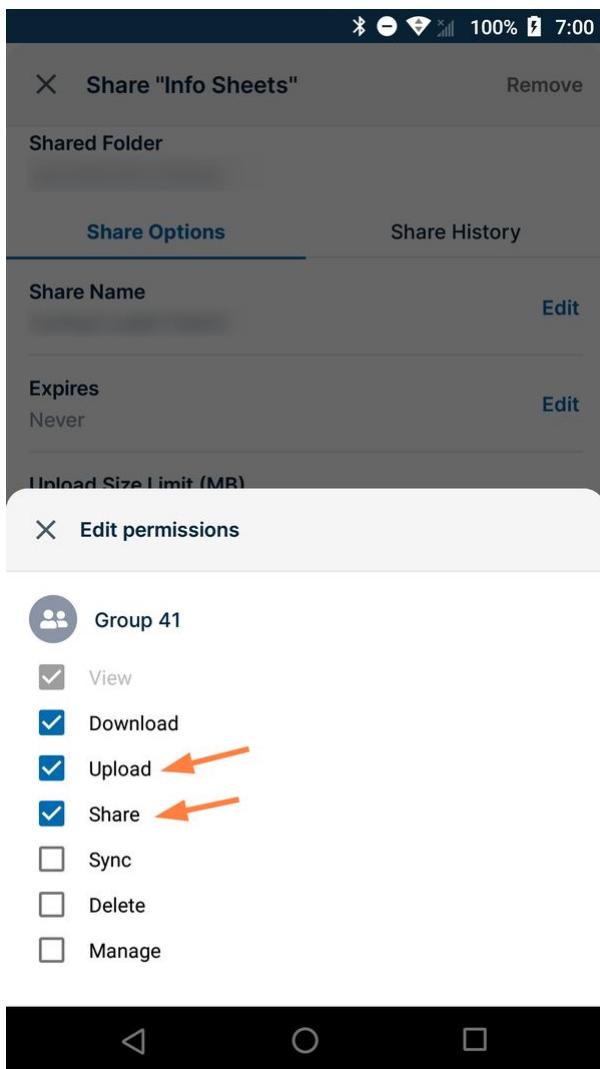

1. Across from the group, tap **Edit**.

A popup shows the available permissions:

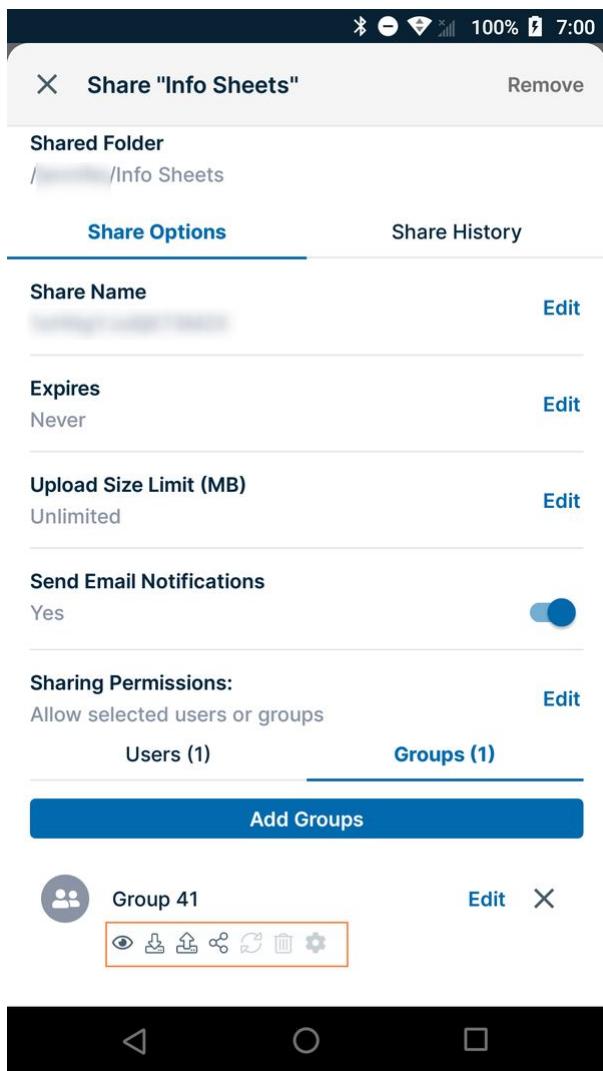

2. Check or uncheck permissions:

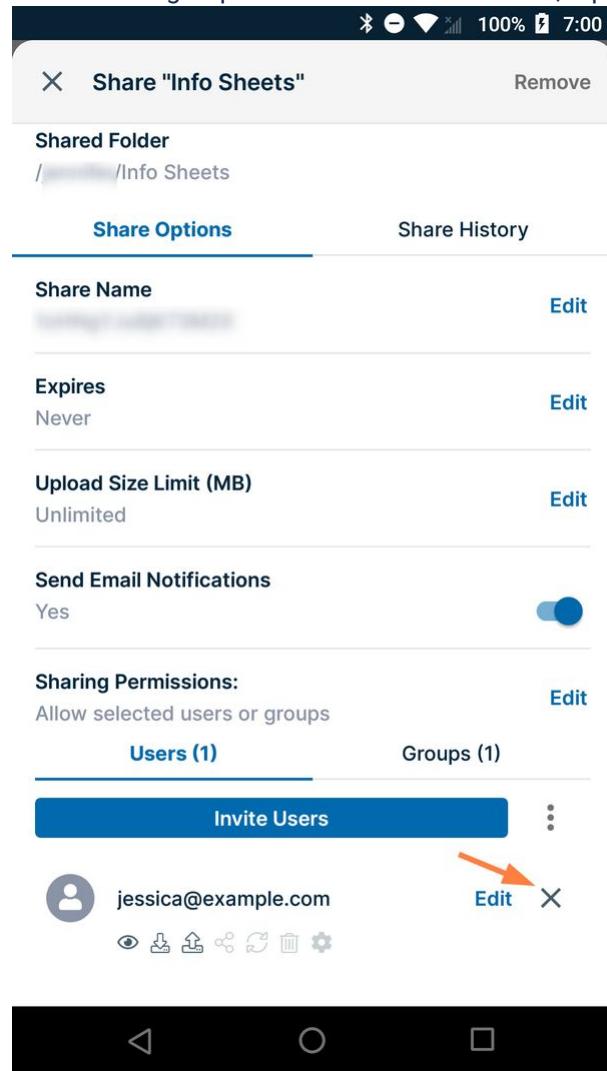

Note that if you check **Share** or **Sync**, **Upload** is automatically also checked.

3. Close the **Edit permissions** box.
The changes to the permissions are saved.

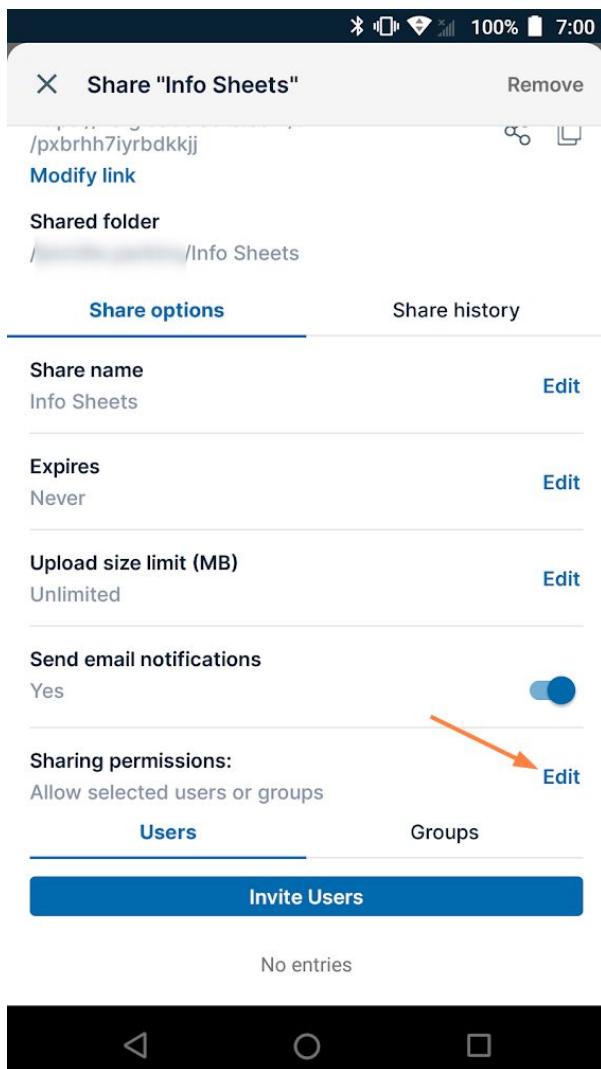

To remove a user or group from a folder share:

To remove a group or user from a folder share, tap the x next to it:

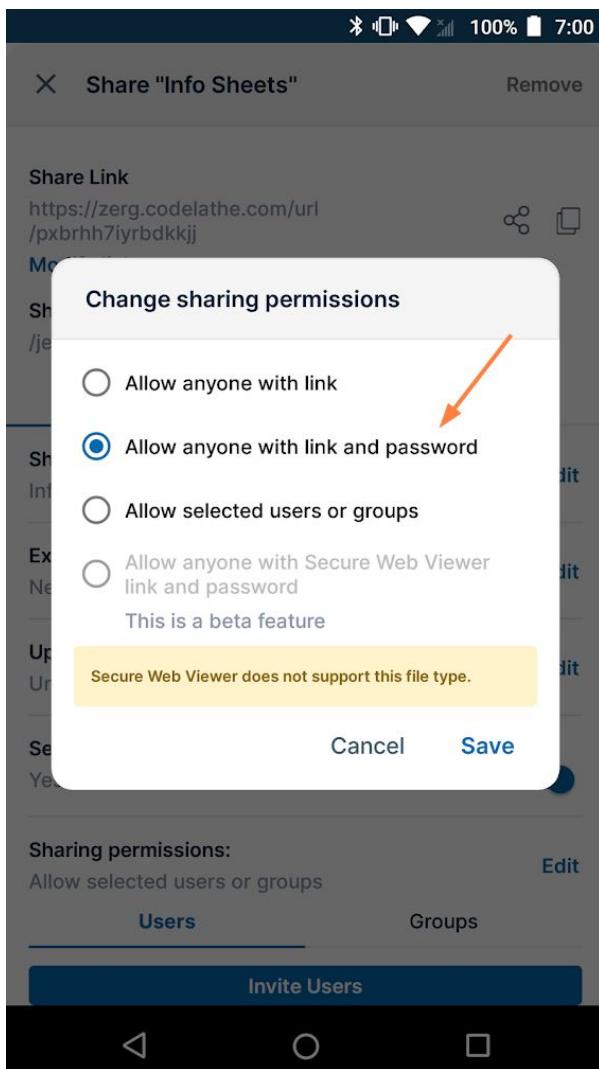

To change a folder share from private to public:

1. In **Sharing Permissions**, tap **Edit**.

2. If you don't want to require users to enter a password to access the share, choose **Allow anyone with link**.
If you want to require users to enter a password to access the share, choose **Allow anyone with link and a password**.
Here, we'll choose **Allow anyone with link and a password**, and tap **Save**.

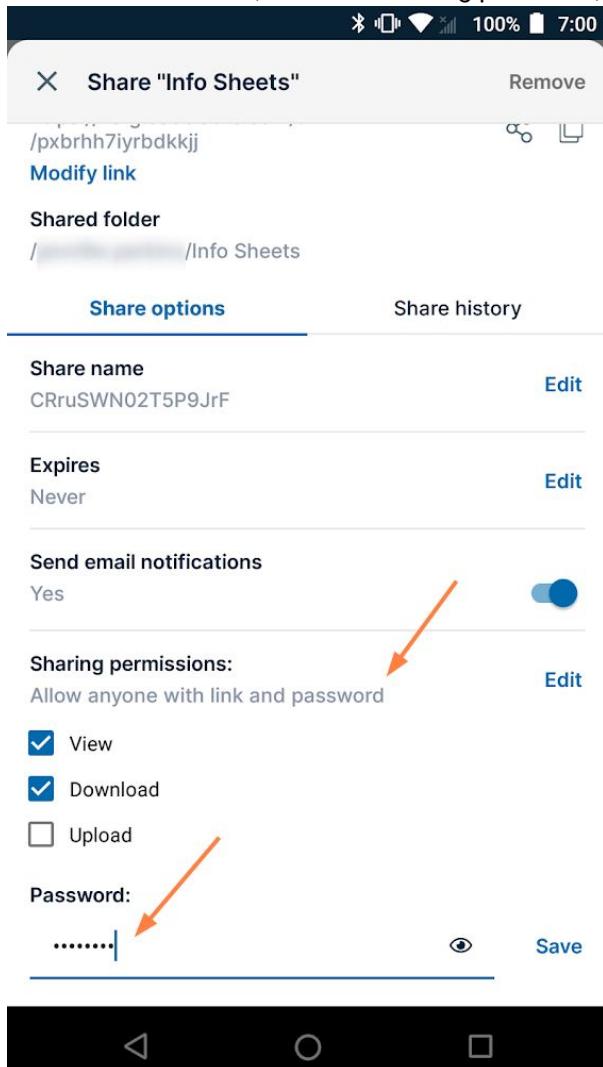

A confirmation dialog asks you to confirm that you want to remove share permissions for specific users and groups and allow share access to everyone.

3. Tap **OK**.

Allow anyone with link and password replaces **Allow selected users or groups**.

4. In the **Password** field, leave the existing password, or enter another one, and then click **Save**.

Users must now enter the password to access the share from the link.

To change the permissions on a public share

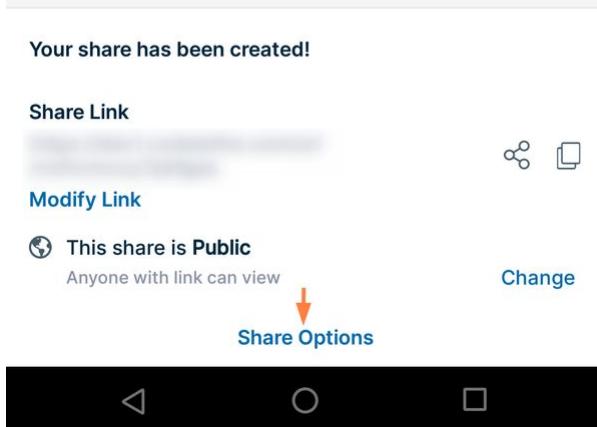

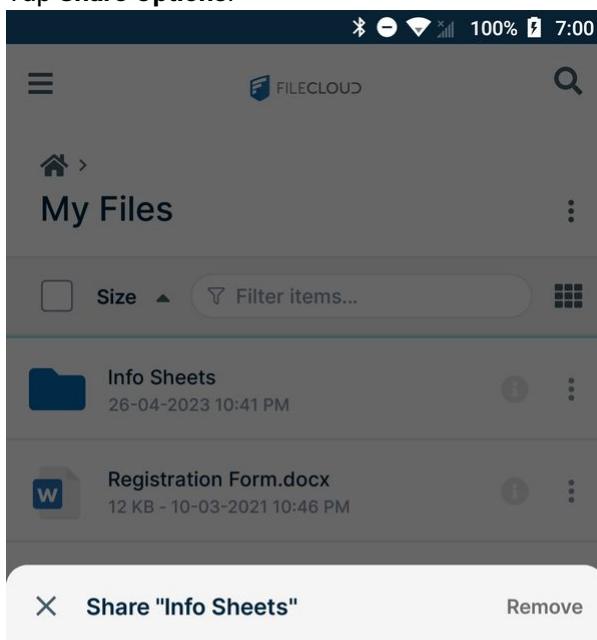

For public folder sharing, the following combinations of options are available.

Permission	Effect
View + Download (default)	Users can browse existing files and download files.
View + Download + Upload	Users can browse existing files, download files and upload files to the folder.
View + Upload	Users can browse existing files, preview files (not download) and upload files to the folder.

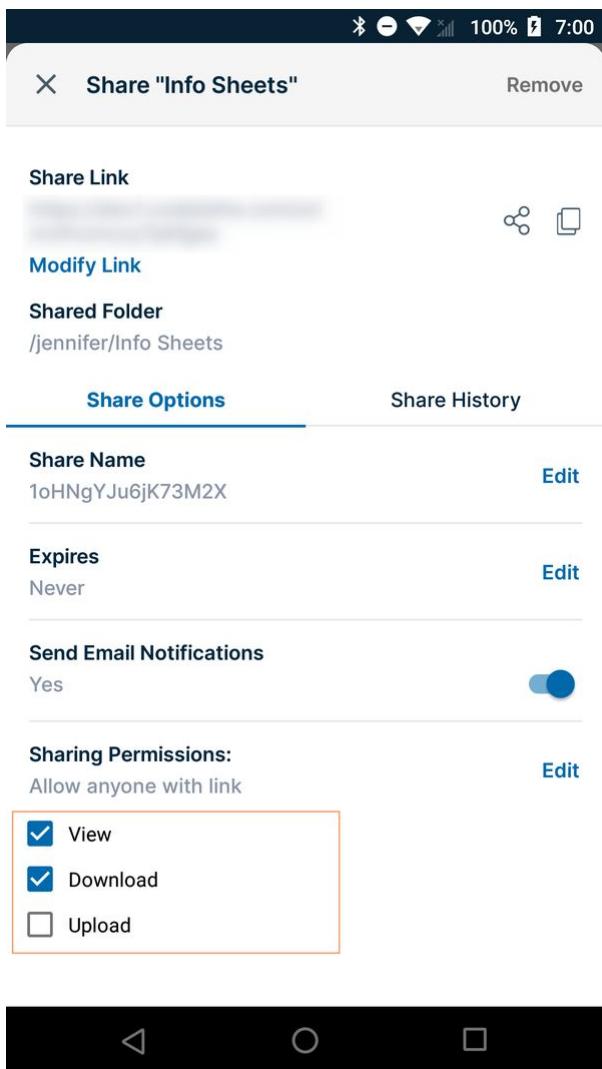

Permission	Effect
View Only	Users can only browse existing files, and preview files (not download).
Upload Only	Users cannot browse existing files, but only upload files. It is like an upload only FTP folder. It is also possible to create a web form to embed in other sites.

To change the permissions on a public share for a folder:

1. Tap **Share Options**.

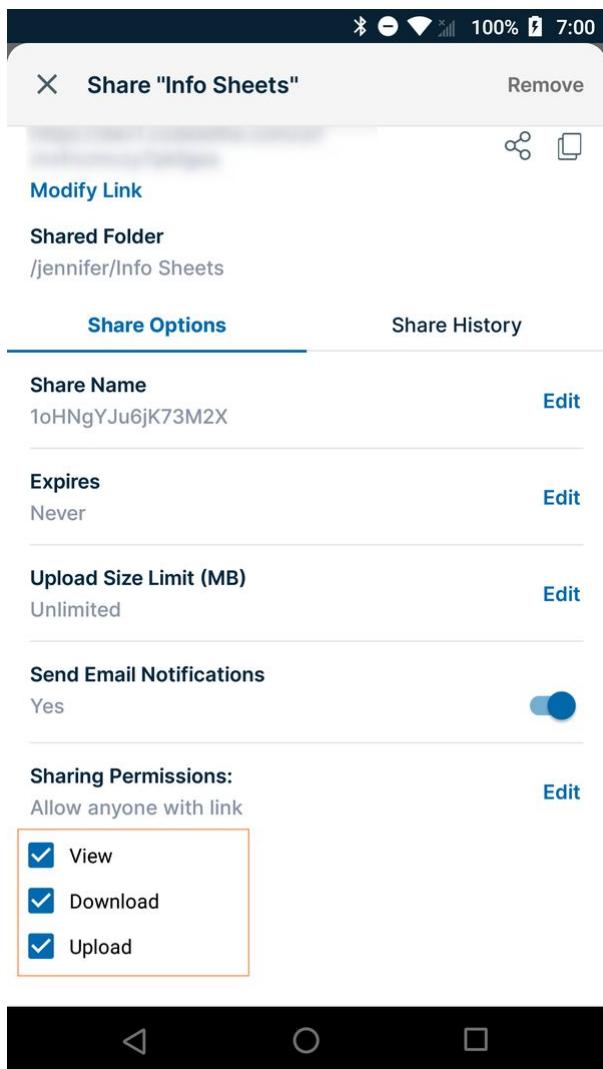

The share screen expands, and **Sharing Permissions** appears at the bottom. By default, the share has View and Download permissions.

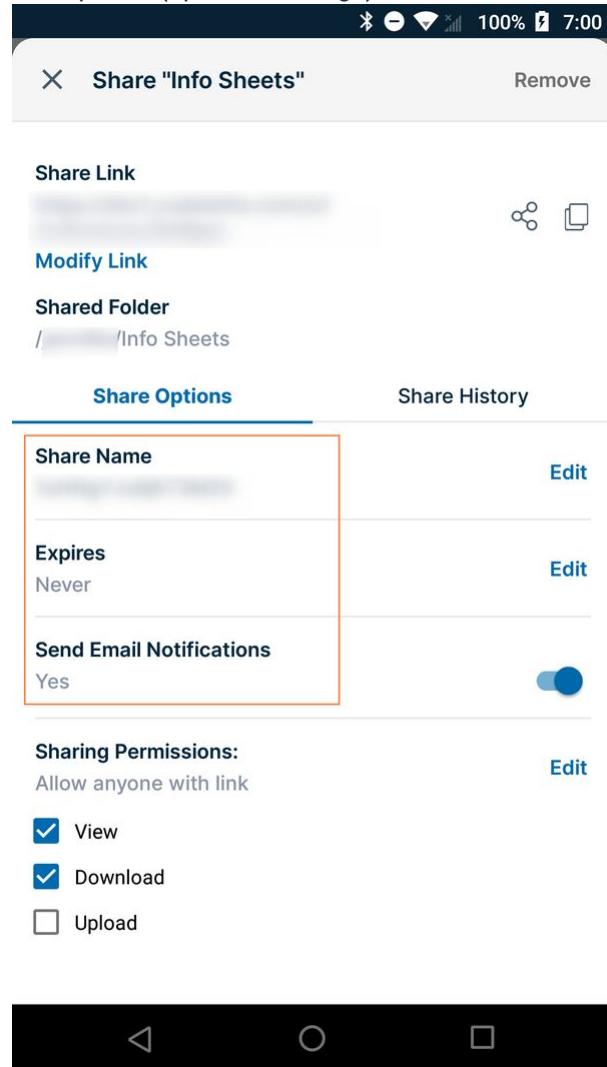

2. Check or uncheck permissions.

Your changes are saved.

To change folder share options:

The options (optional settings) for a share are listed under **Share Options**:

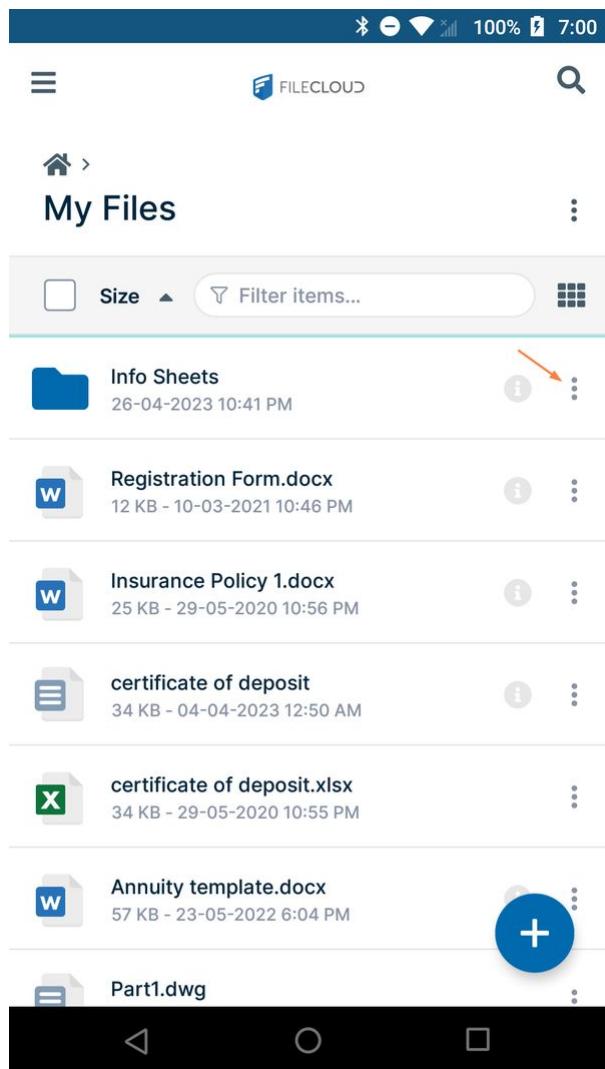

For information on setting share options, see:
Share Options for Public and Private Folders⁸

To remove a folder share:

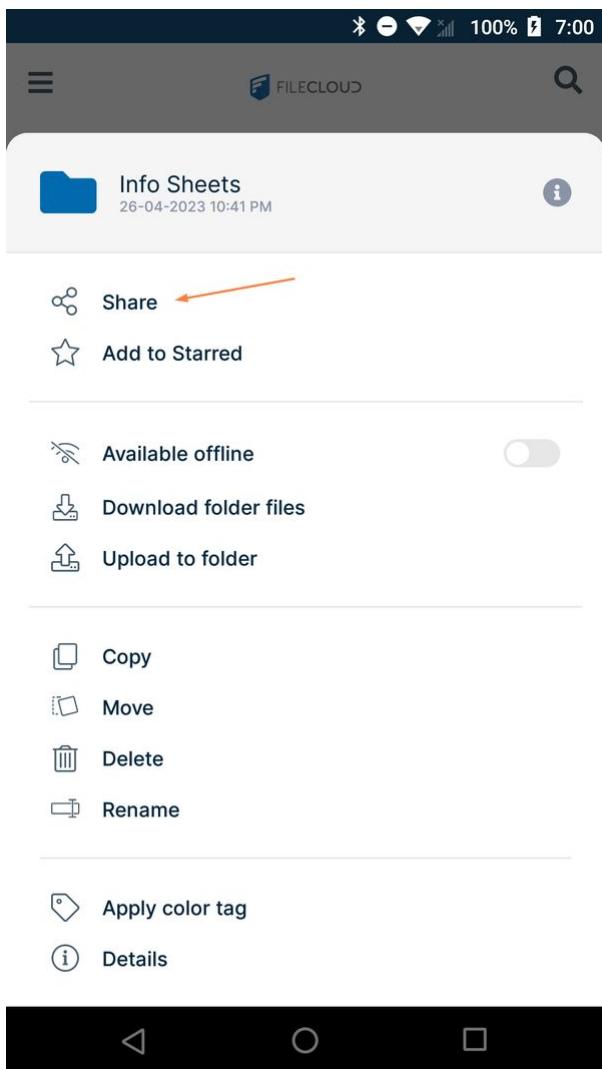

To remove a folder share:

1. Open the FileCloud app.
2. Navigate to the folder whose share you want to remove.
3. Tap the more (three dot) icon next to the folder.

8. <https://www.filecloud.com/supportdocs/display/FCDOC/Share+Options+for+Public+and+Private+Folders+v23.1>

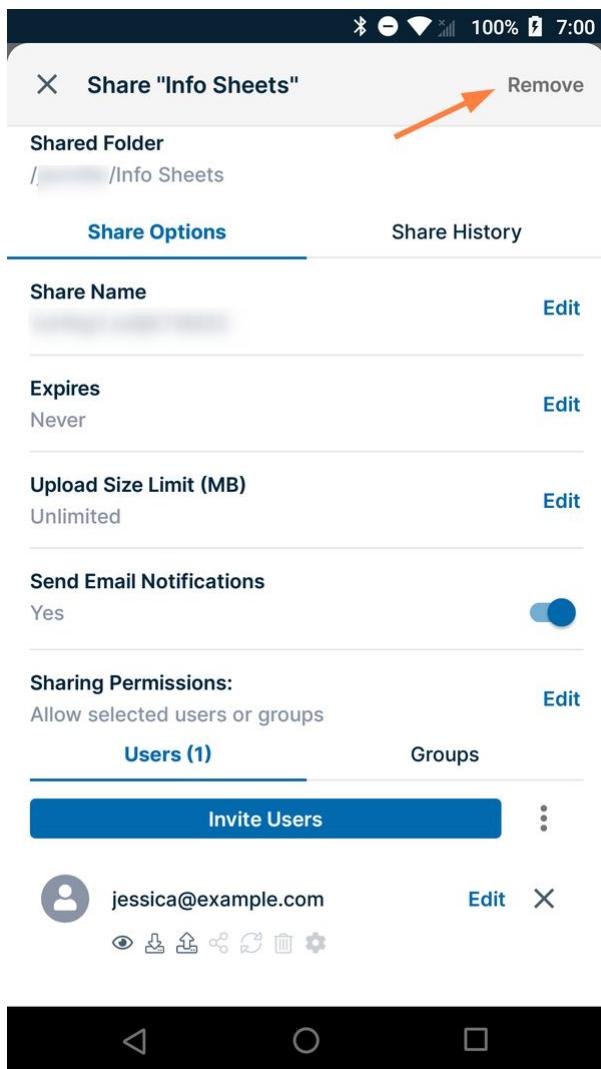

4. Tap **Share**.

The share details open.

5. Tap **Remove**.

The share is removed. Users who were given access to the share can no longer view it in their **Shared with me** folder or access it through the share link.

To share files on Android, see [Share a File on Android \(see page 342\)](#).

For more detailed information about file and folder shares, see [Sharing Files and Folders](#).

Upload a File to the Server on Android

If you have stored or are editing a file on another app on your Android, and you want to save the file to FileCloud, you can upload the file.

In the FileCloud App, you can choose a file from the following locations:

- Local storage on your Android device
- Cloud storage connected to Android device (for example, Google Drive)

The FileCloud app uploads files and folders in background. You can continue working while upload is in progress. However, the FileCloud app must be in foreground and you should not switch to a different server until the upload is completed.

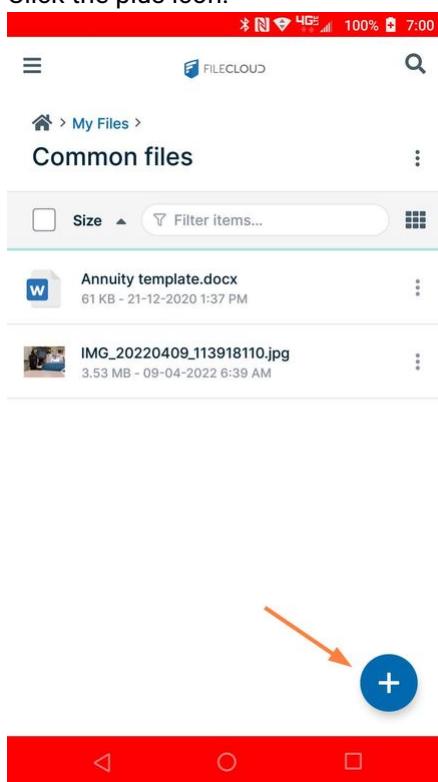

To upload a file or folder:

There are a few different ways to upload a file or folder to FileCloud.

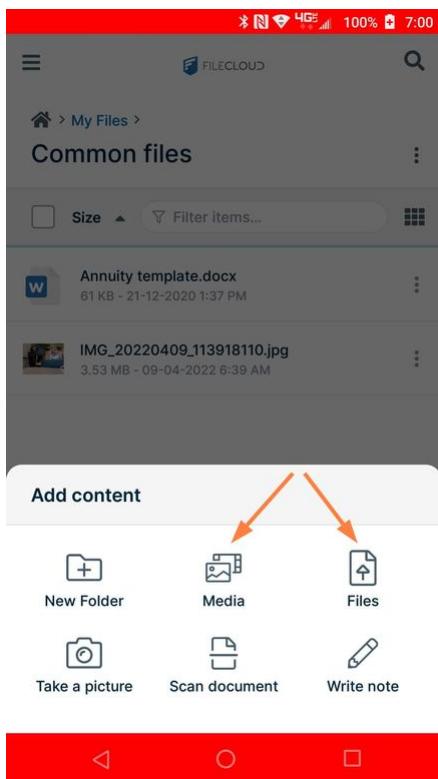

When you're working in FileCloud, the easiest method is clicking the that appears when you have a folder selected.

Upload a file by tapping the icon:

1. Log in to the Android app, and navigate to the folder that you want to upload the file or folder to.
2. Click the plus icon.

Various options for adding content pop up.

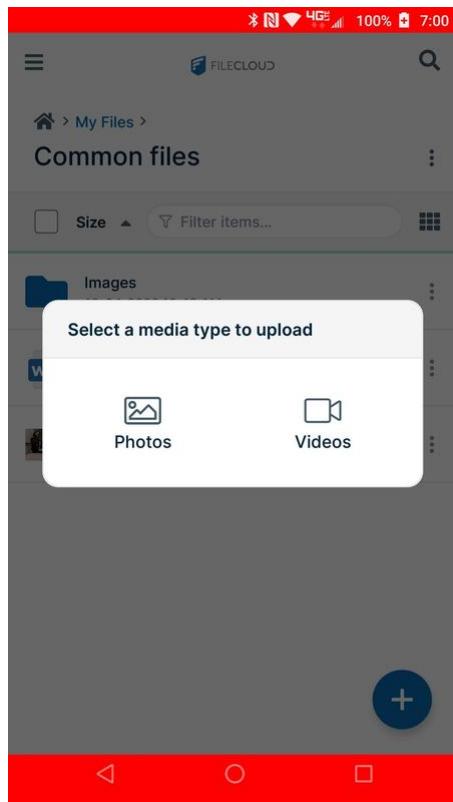

3. Tap **Media** to upload media files stored on your Android, or tap **Files** to upload files or folders from your Android or from a remote location.

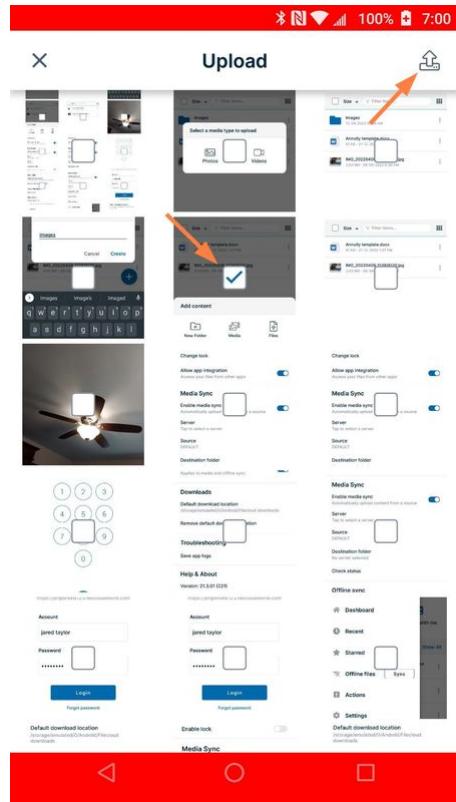

Upload images or videos stored on your Android

The Media option enables you to upload image or video files stored on your device into the folder in FileCloud.

- a. Tap **Media**.
You are prompted to choose **Photos** or **Videos**.

- b. If you choose **Photos**, the **Pictures** folder in your Android's **File Manager** opens; If you choose **Videos**, the **Videos** folder in your Android's **File Manager** opens.
- c. Check the checkboxes for the files that you want to upload, and click the upload icon.

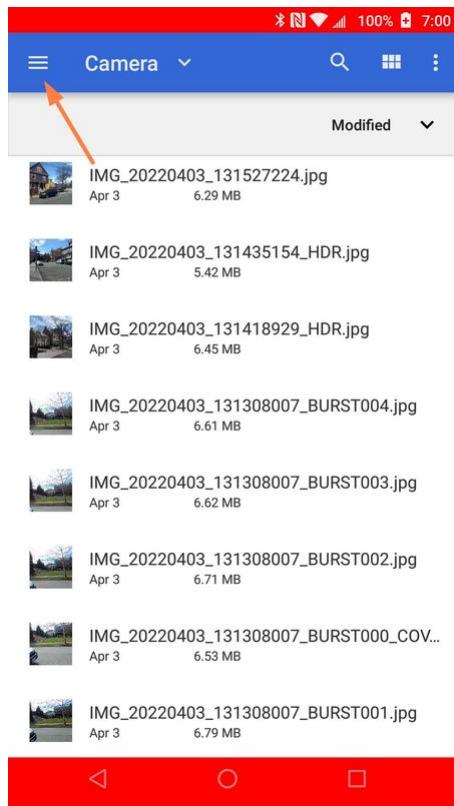

Upload files from local and remote locations

The Files option lets you upload files or folders from local or remote locations accessible from your Android.

a. Tap **Files**.

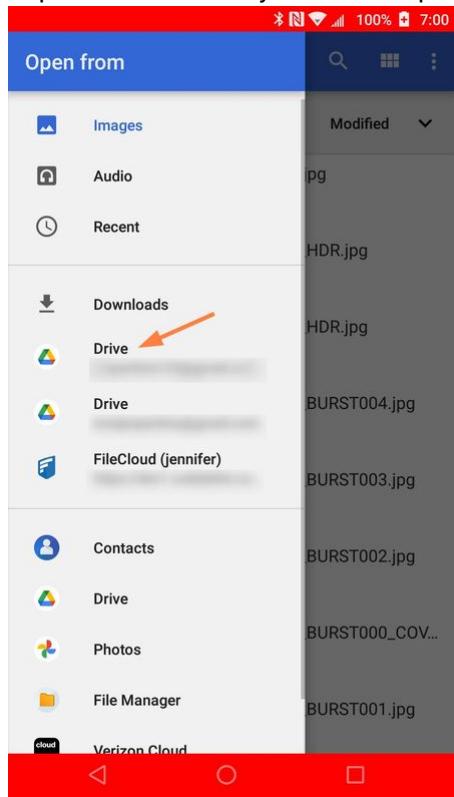

Initially, Android may open the last location accessed.

To access the location you're looking for, tap the menu icon in the upper-right corner.

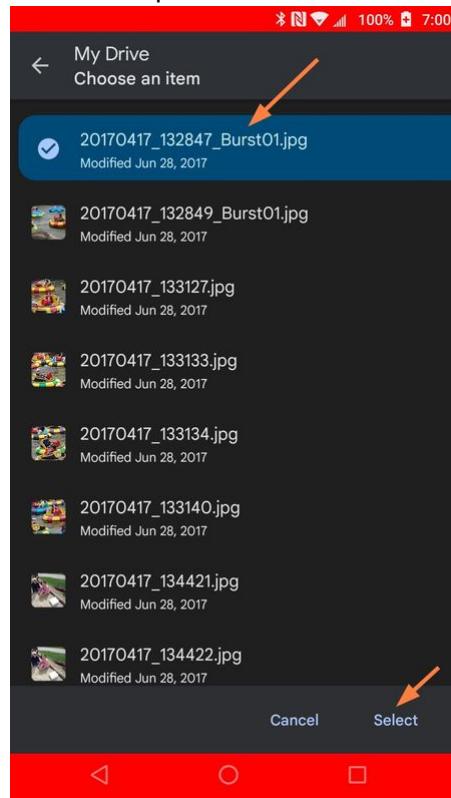

Locations that you can access from your Android device open. The locations may be both local and remote.

b. Tap the location that you want to upload a file or folder from.

The screen displays the items in the location.

c. Select and upload a file or folder.

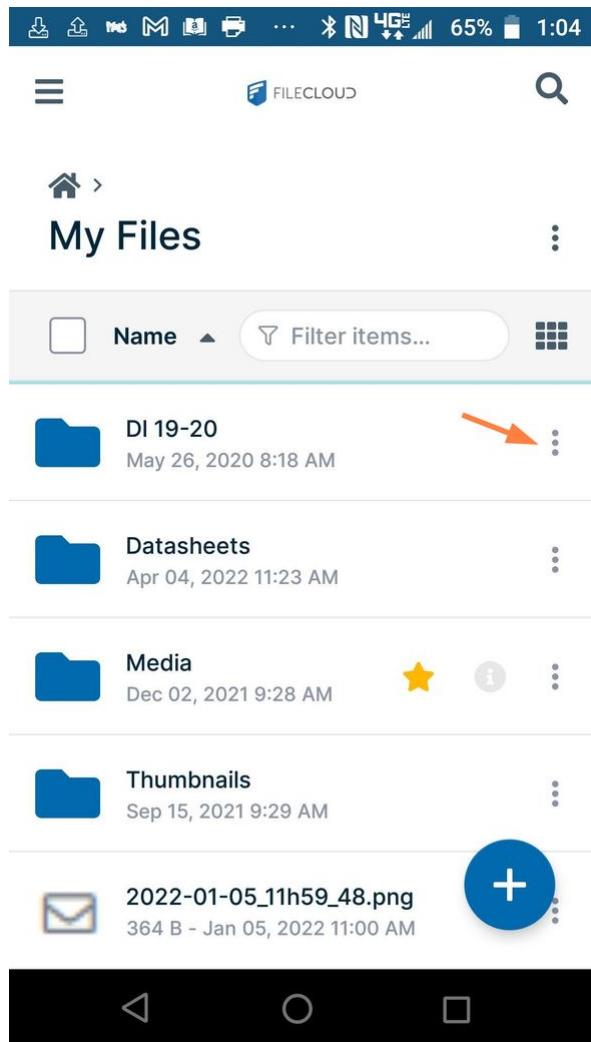

Pop-up notifications inform you when upload is in progress and when upload is complete.

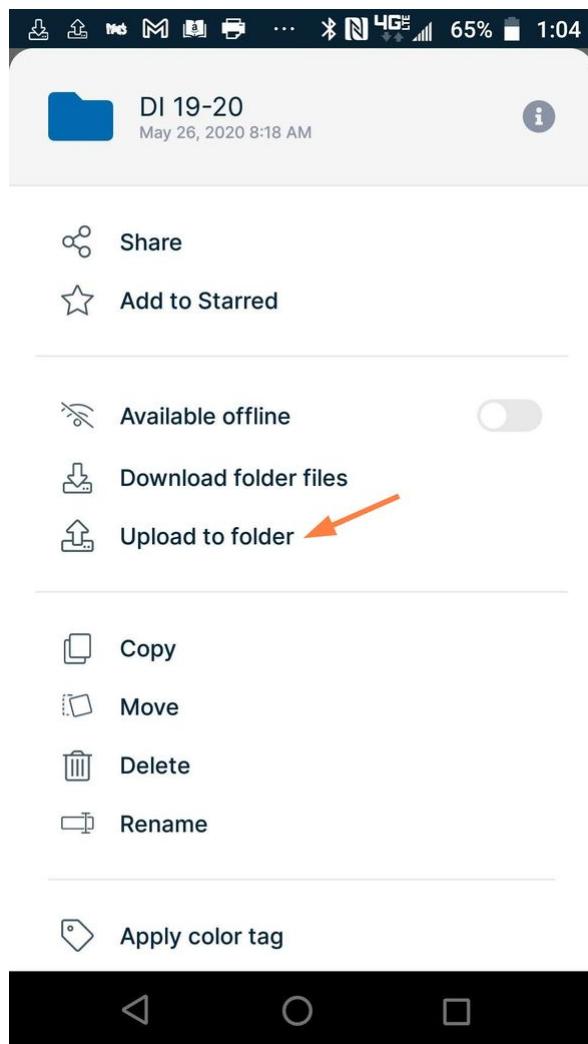

Upload a file by tapping More > Upload

To upload a file:

1. Open the FileCloud app.
2. Navigate to the folder where you want to save the file.
3. Click the more (three dot) icon for the folder.

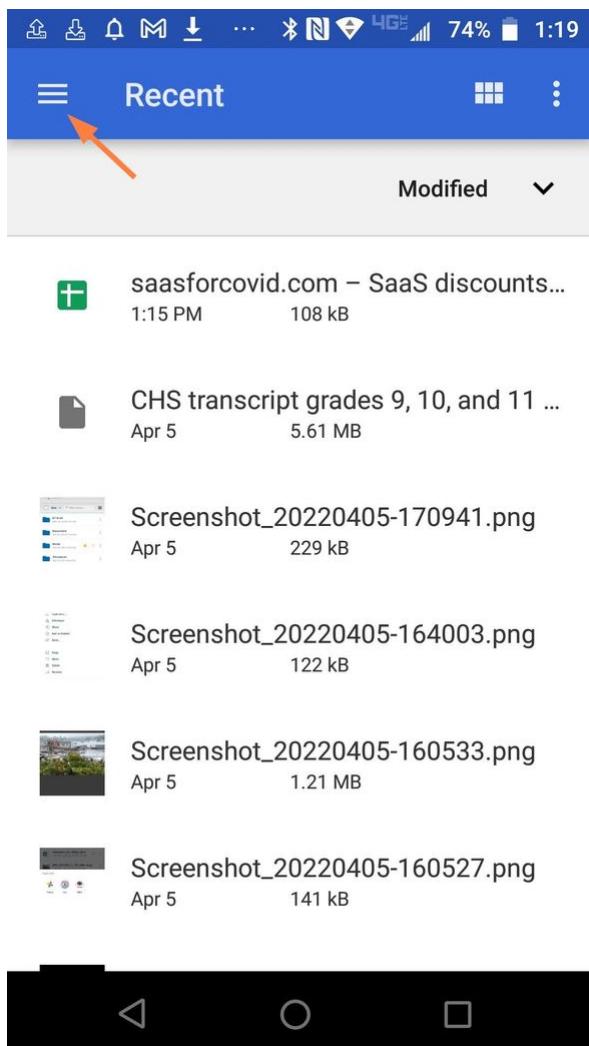

4. In the options that open, choose **Upload to folder**.

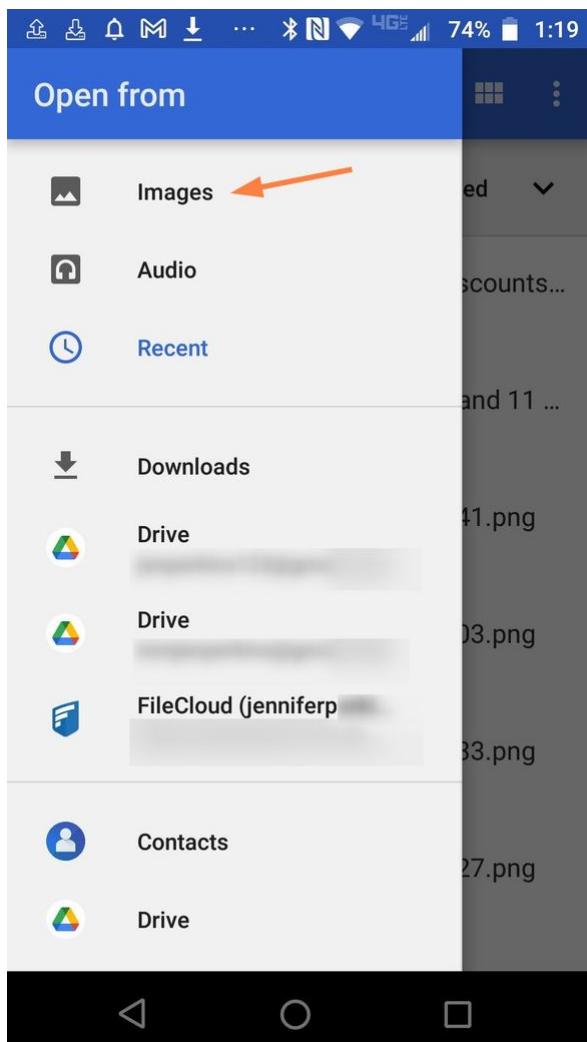

A default location either local to or remote from your Android device opens, for example, **Recent** (local files).

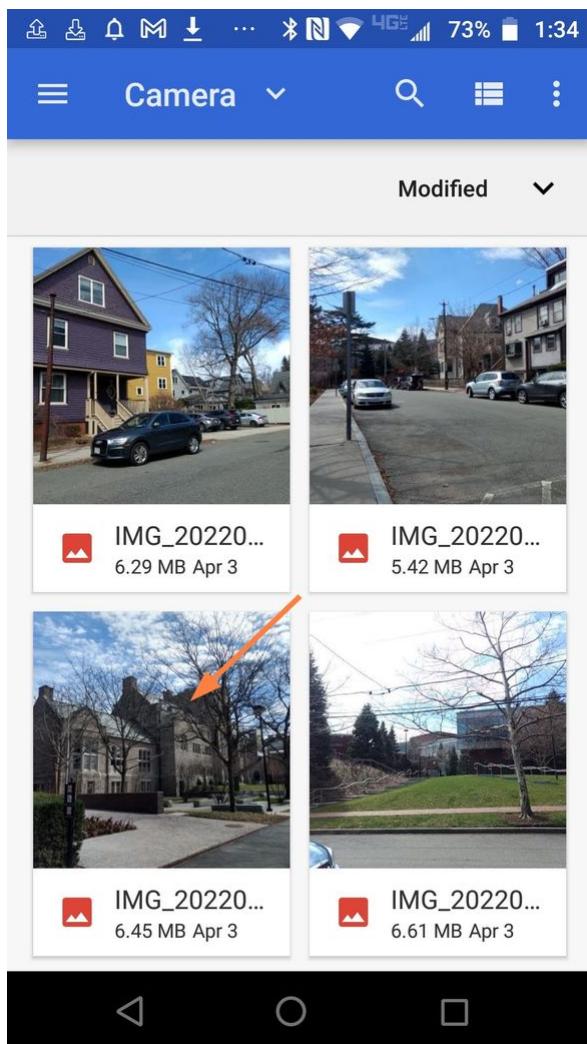

5. Click the menu icon in the upper left corner to see other locations.

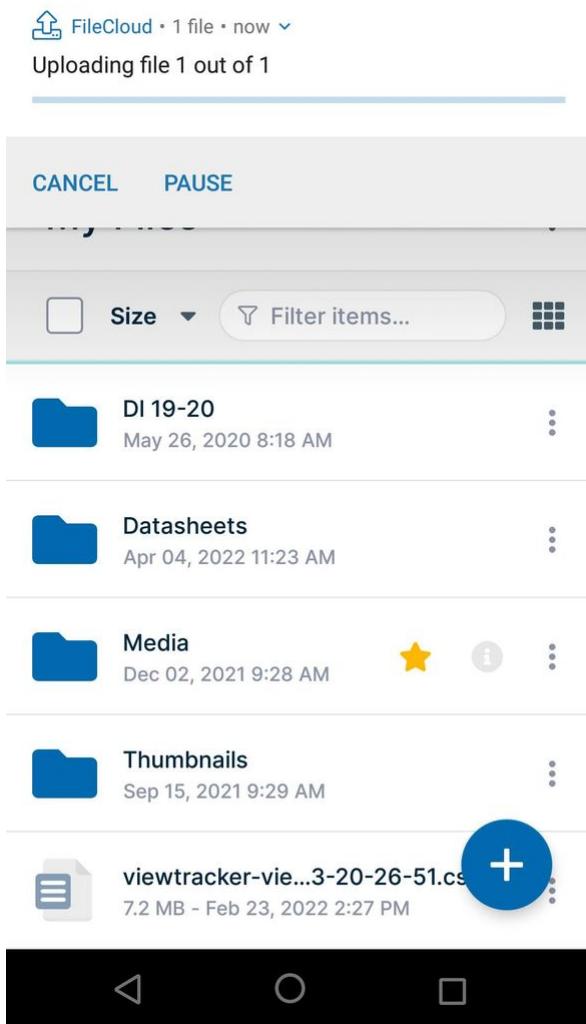

6. Tap the location you want to choose a file from.

7. Navigate to the file that you want to upload and tap it.

Pop-up notifications inform you when the file is being uploaded and when upload is complete.

Upload while in another app

On Android, when you are working in another app, you can remain in that app and save a file in FileCloud.

If you have opened an existing FileCloud file in an Office app for edit, when you save the file, the changes are automatically saved to FileCloud. See [Previewing and Editing Your Files in Android \(see page 326\)](#).

For general instructions on uploading a file from another app to FileCloud, see [Saving Files from Other Apps to FileCloud \(see page 524\)](#).

Restrictions on filenames and file extensions in FileCloud

Please note the following restrictions when uploading files to FileCloud:

- Files with the same name:

- If you upload a file with the same name and the same case as another file in the same folder, it overwrites the file.
- If you upload a file with the same name but a different case than another file in the same folder, you cannot upload the file and the File Operations window displays a file name conflict message.
- If you upload files with the same name but different file extensions, like **myfile.doc** and **myfile.docx**, they are treated as different files.
- FileCloud cannot upload files with leading spaces in the filename.
- By default, files with the extensions **php**, **php5**, **phar**, and **phtml** cannot be uploaded into FileCloud.

For Admins

- To specify which file extensions may be uploaded into FileCloud, see Managing File Extensions and Restricting File Extensions.
- To restrict certain filenames from being uploaded into FileCloud, see Restricting File Names.

Create New Files and Folders in Android

While you are working in the FileCloud Android app, various methods are provided to you for creating new files and folders.

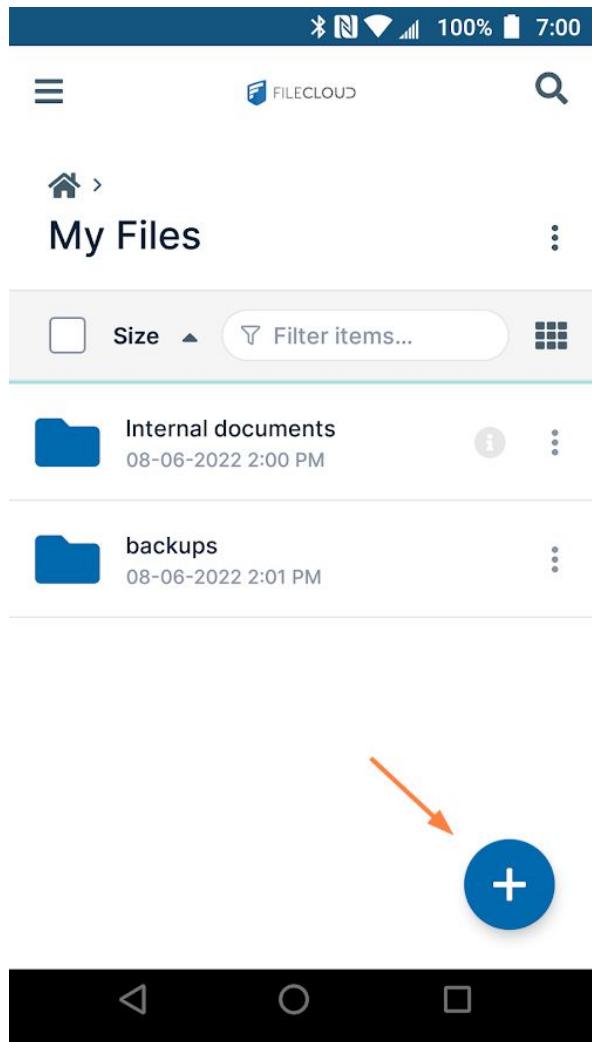

To access one of these methods, tap the  icon:

- [Add a folder \(see page 416\)](#)
- [Enter text and save it as a .txt file \(see page 420\)](#)
- [Take a photo and save it as a .jpg file \(see page 432\)](#)
- [Scan a file and save it as a .pdf or .jpg file \(see page 425\)](#)

Create New Folders in Android

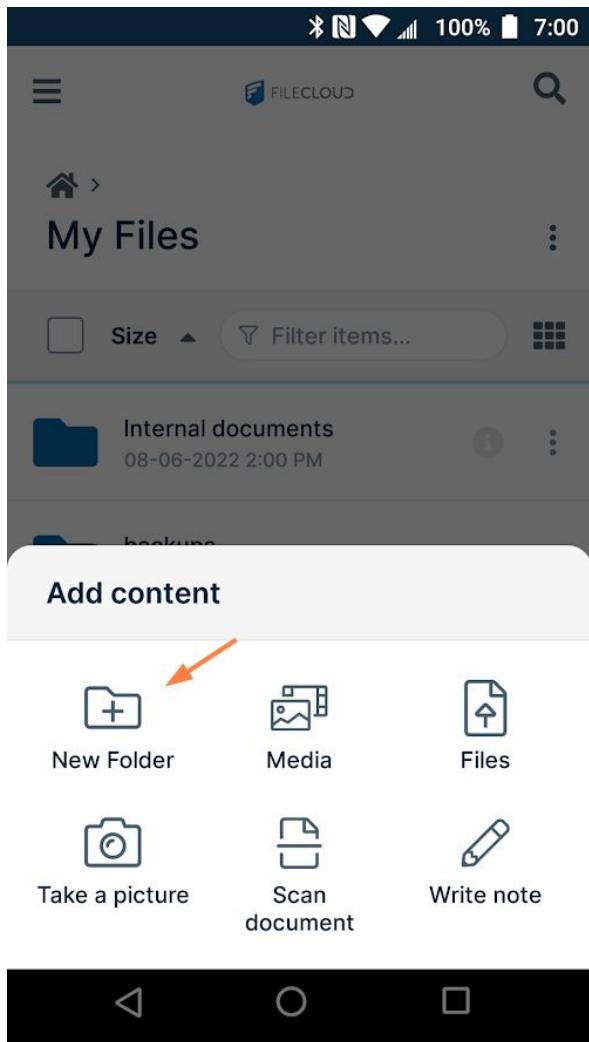

While you are working in the FileCloud Android app, you can add a new folder to My Files or any of its sub-folders.

1. Go to My Files or navigate to a My Files sub-folder.
2. Tap .

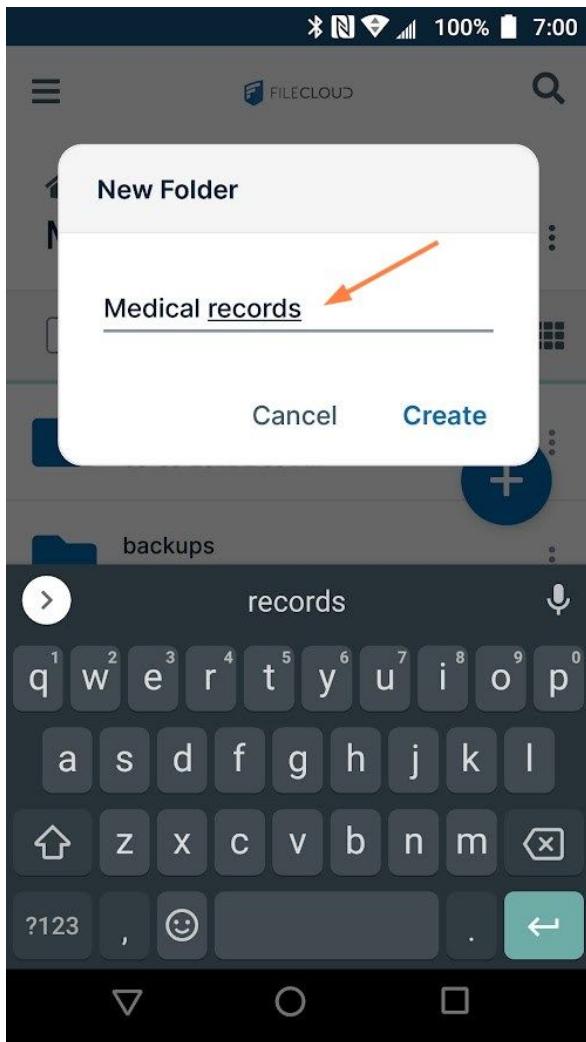

Add Content options open.

3. Tap **New Folder**.

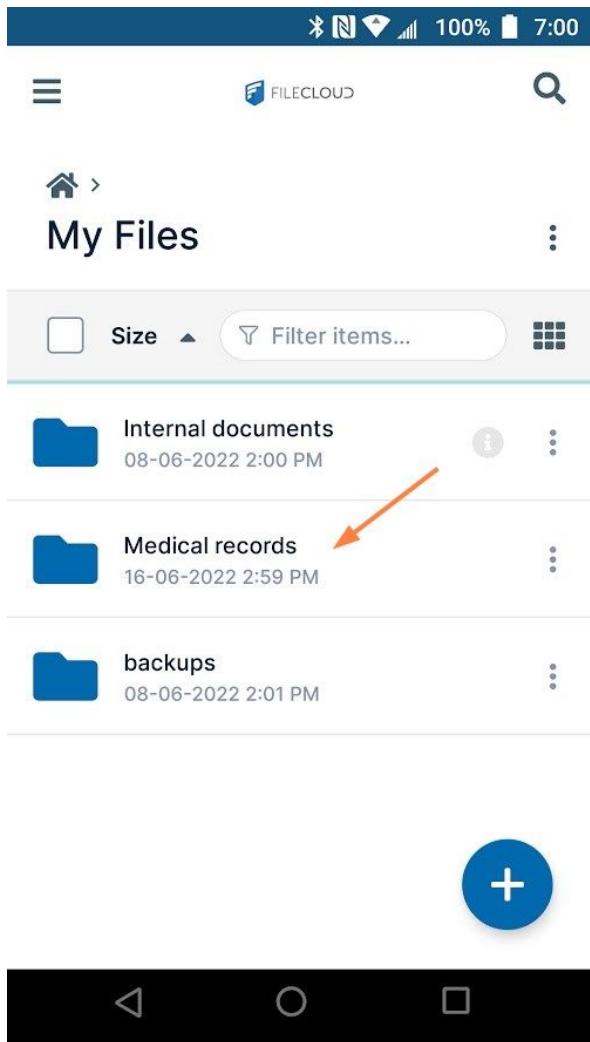

A dialog box opens.

4. Enter a name for the new folder.

5. Tap **Create**.

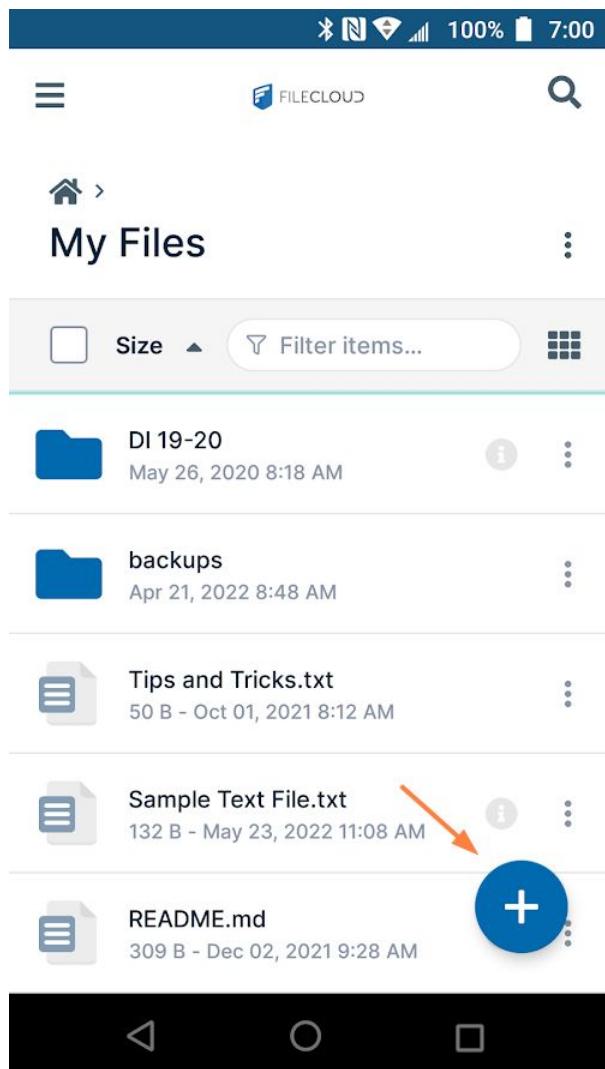

The new folder appears in FileCloud.

Create Text Files in Android

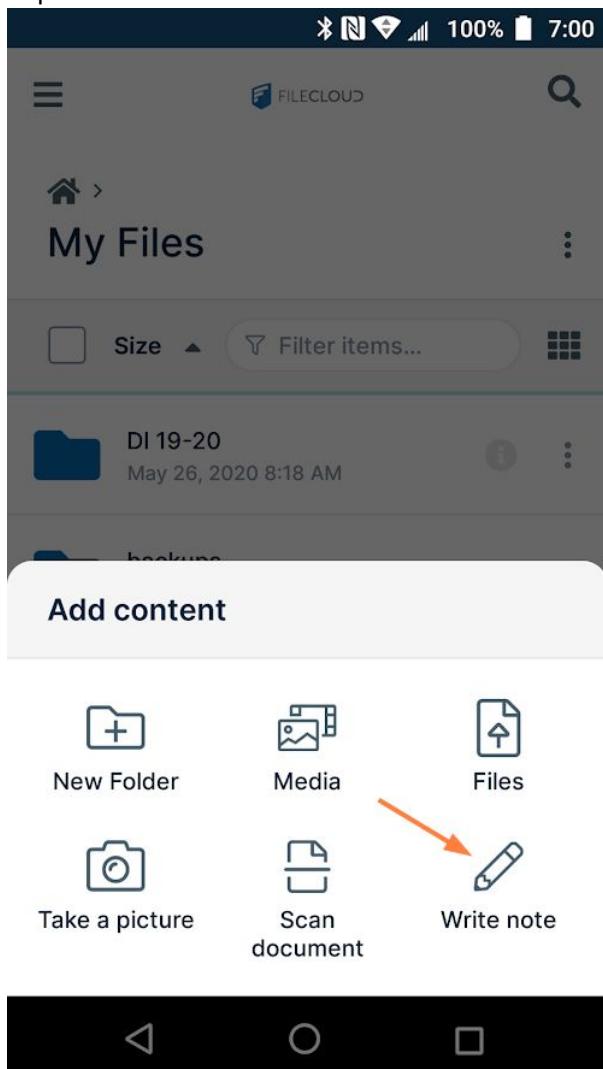

While you are working in the FileCloud Android app, you can create a new text file.

1. Go to My Files or navigate to a My Files sub-folder.
2. Tap

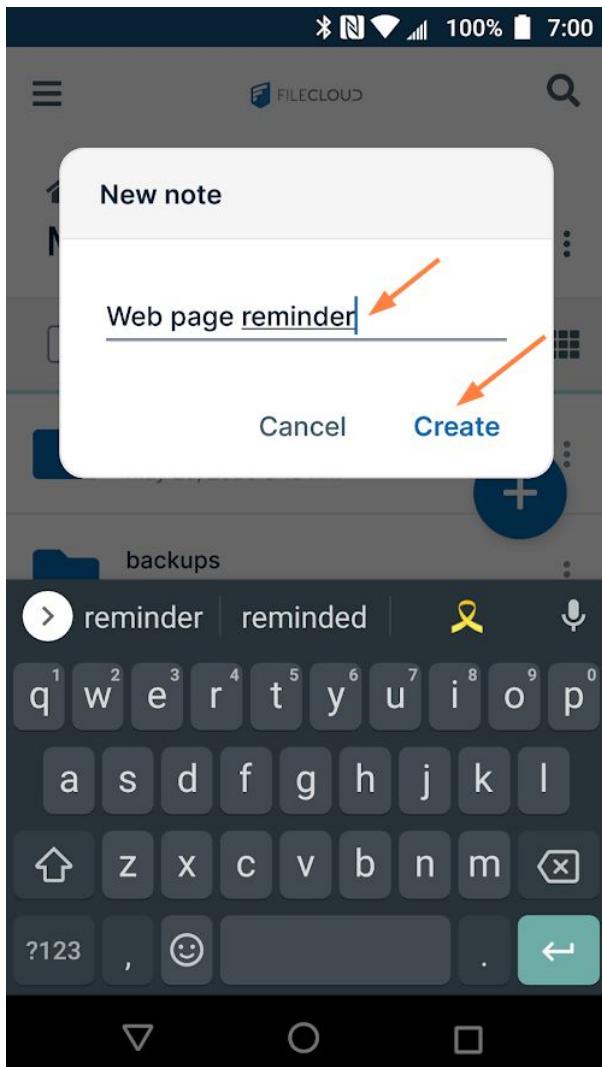

Add Content options open.

3. Tap **Write note**.

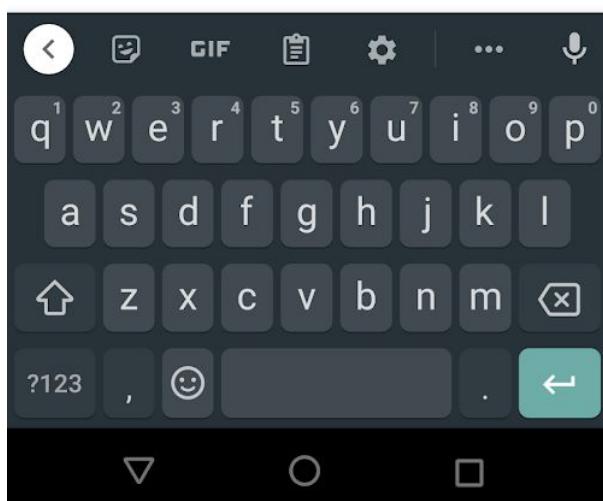

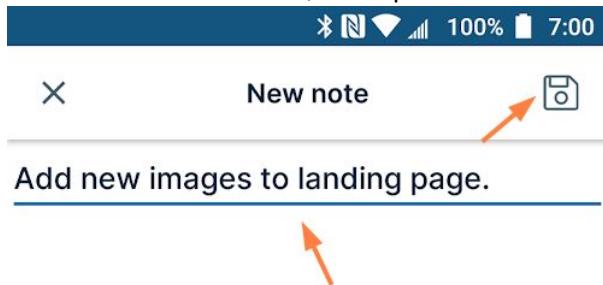

A **New note** dialog box opens. Enter a name for the file, and tap **Create**.

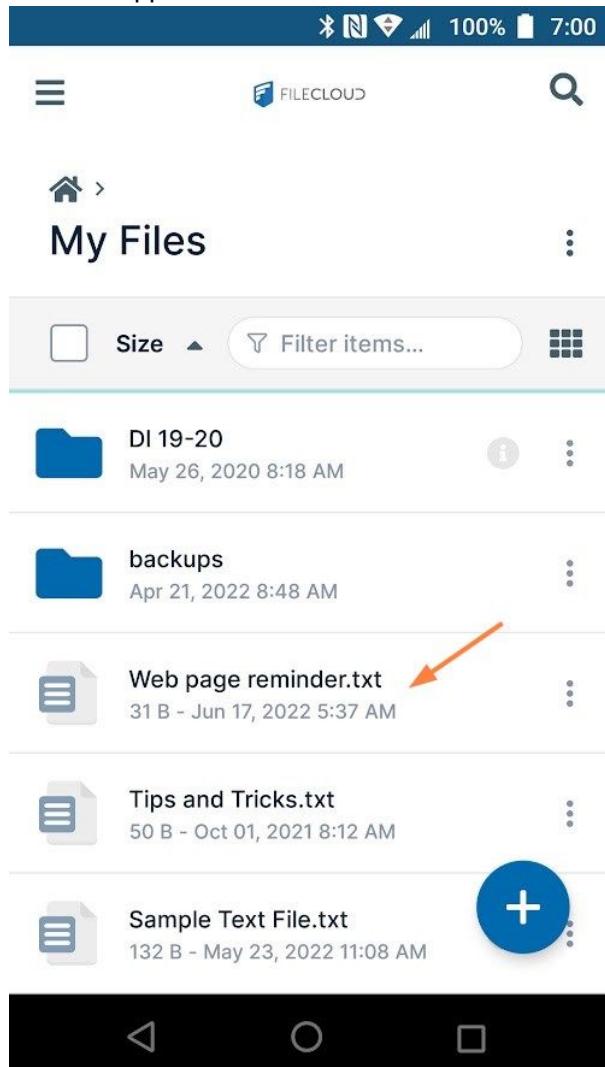

The file opens.

4. Enter the text for the note, and tap the save icon.

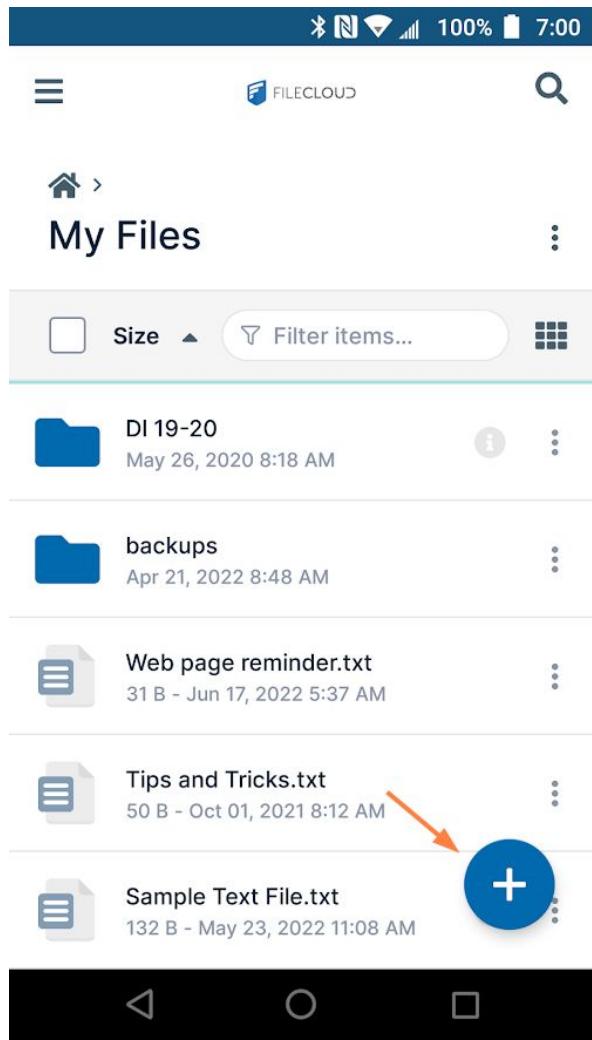

The note appears as a new text file in FileCloud.

Scan a Document from Android

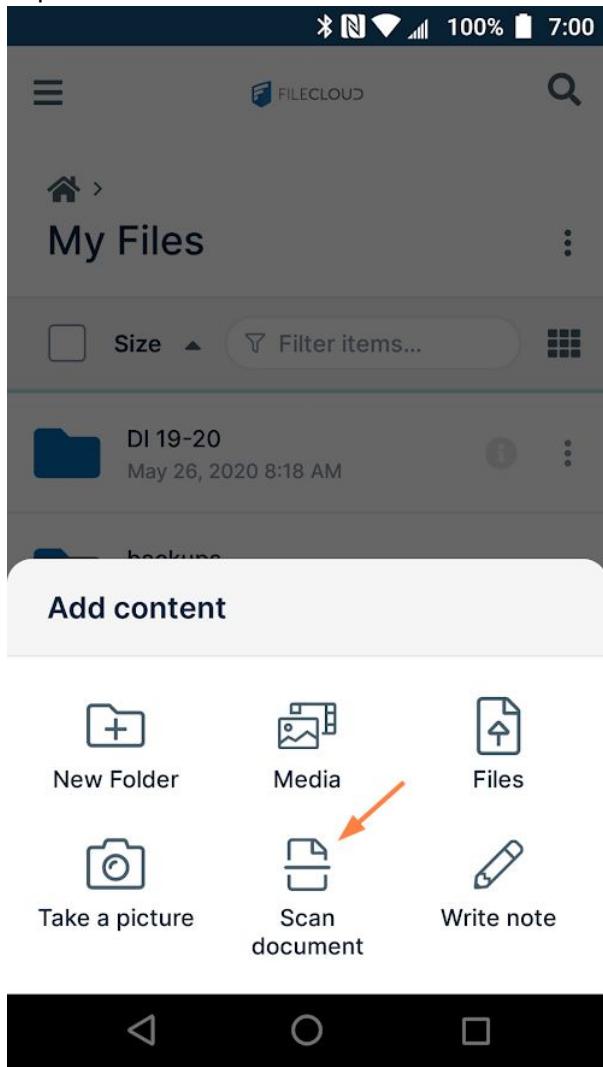

While you are working in the FileCloud Android app, you can use your phone to scan a document and add it to FileCloud as a .pdf or .jpg file.

1. Go to My Files or navigate to a My Files sub-folder.
2. Tap .

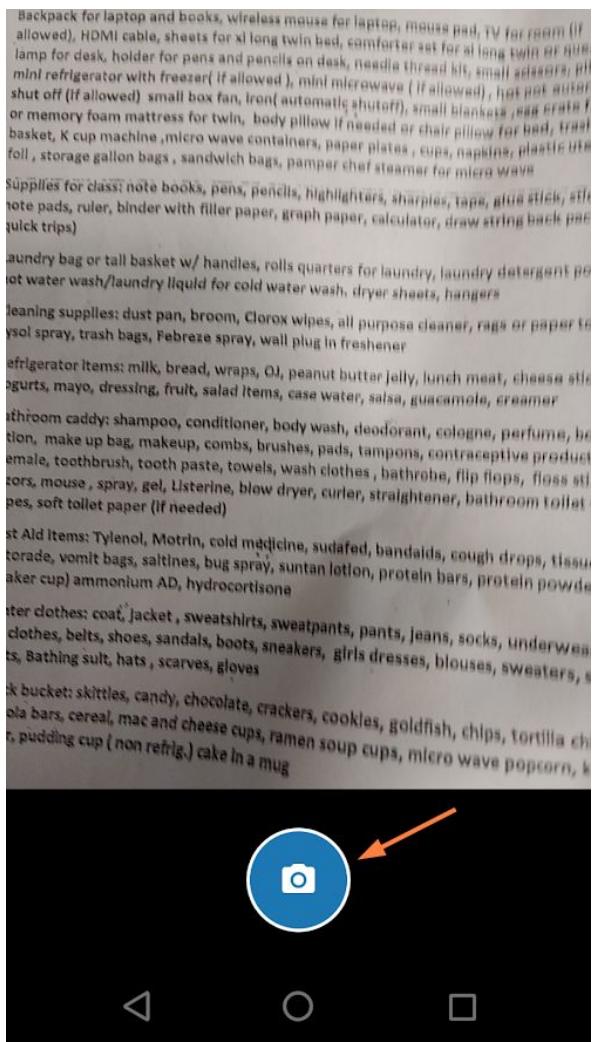

Add content options open.

3. Tap **Scan document**.

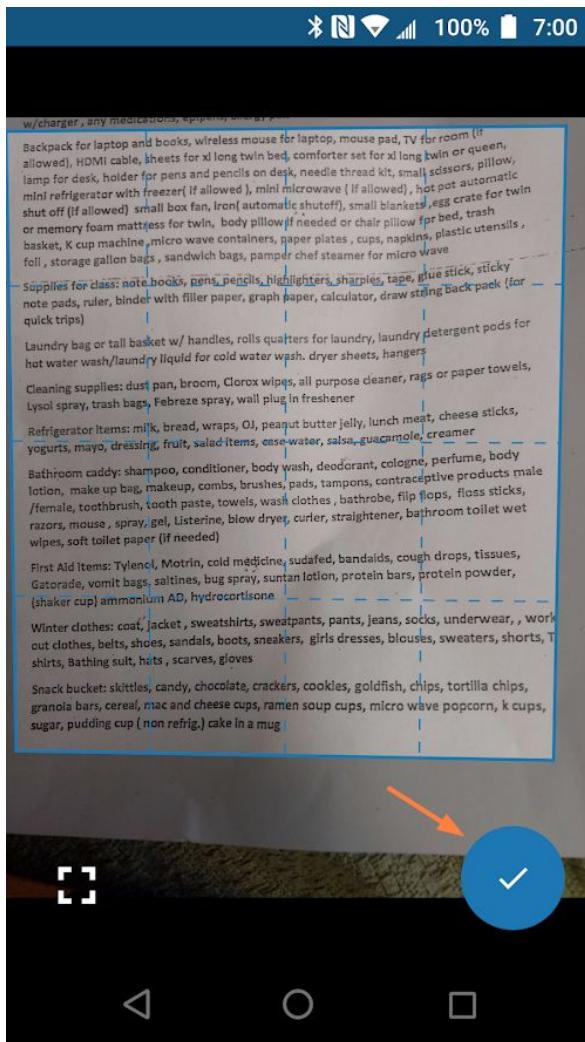

A scan screen opens.

4. Position the document, and tap the Camera button to scan it.

The screen displays the borders of your selection for you to adjust.

5. Adjust the borders to include the text you want, and click the check button.

6. To make adjustments to the image, use the edit buttons below the image.
7. To scan another page, use the camera+ button below the image.
8. Then tap the check button to save the scanned image.

Backpack for laptop and books, wireless mouse for laptop, mouse pad, TV for room (if allowed), HDMI cable, sheets for xl long twin bed, comforter set for xl long twin or queen, lamp for desk, holder for pens and pencils on desk, needle thread kit, small scissors, pillow, mini refrigerator with freezer (if allowed), mini microwave (if allowed), hot pot automatic shut off (if allowed), small box fan, iron (automatic shutoff), small blankets, egg crate for twin or memory foam mattress for twin, body pillow if needed or chair pillow for bed, trash basket, K cup machine, micro wave containers, paper plates, cups, napkins, plastic utensils, foil, storage gallon bags, sandwich bags, pamper chef steamer for micro wave

Supplies for class: note books, pens, pencils, highlighters, sharpies, tape, glue stick, sticky notes, ruler, binder with filler paper, graph paper, calculator, draw string back pack (for quick trips)

Laundry bag or tall basket w/ handles, rolls quarters for laundry, laundry detergent pods for hot water wash/laundry liquid for cold water wash, dryer sheets, hangers

Cleaning supplies: dust pan, broom, Clorox wipes, all purpose cleaner, rags or paper towels, Lysol spray, trash bags, Febreze spray, wall plug in freshener

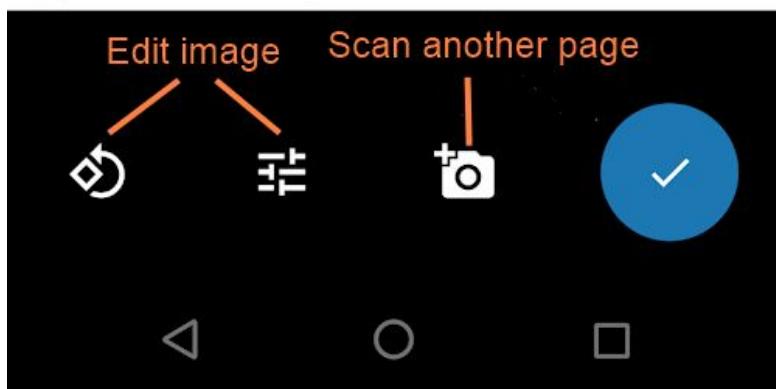

Refrigerator items: milk, bread, wraps, OJ, peanut butter jelly, lunch meat, cheese sticks, yogurts, mayo, dressing, fruit, salad items, case water, salsa, guacamole, creamer

Bathroom caddy: shampoo, conditioner, body wash, deodorant, cologne, perfume, body lotion, make up bag, makeup, combs, brushes, pads, tampons, contraceptive products male /female, toothbrush, tooth paste, towels, wash clothes, bathrobe, flip flops, floss sticks, razors, mouse, spray, gel, Listerine, blow dryer, curler, straightener, bathroom toilet wet wipes, soft toilet paper (if needed)

First Aid items: Tylenol, Motrin, cold medicine, sudafed, bandaids, cough drops, tissues, Gatorade, vomit bags, saltines, bug spray, suntan lotion, protein bars, protein powder, (shaker cup) ammonium AD, hydrocortisone

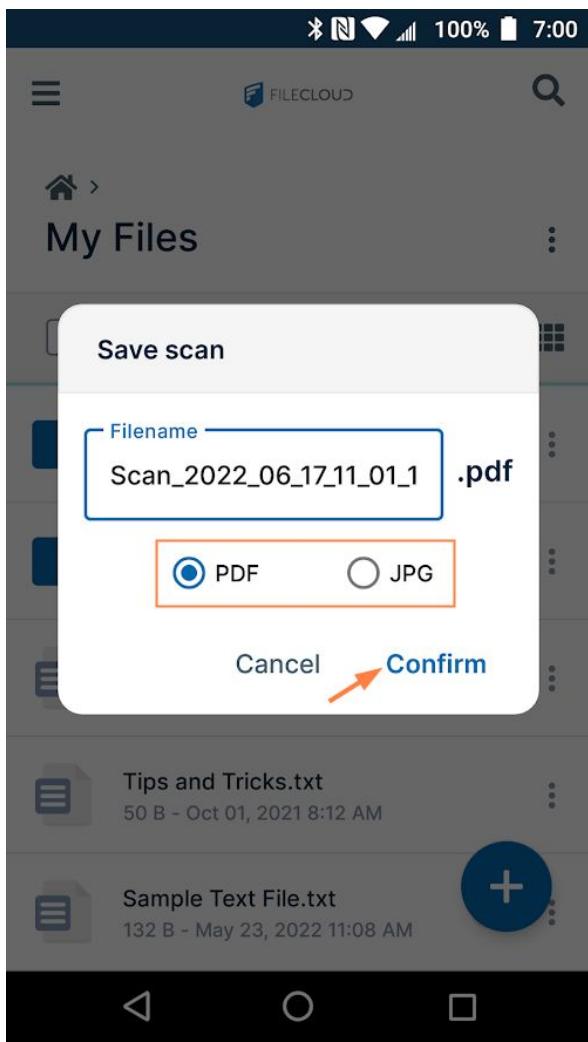

Winter clothes: coat, jacket, sweatshirts, sweatpants, pants, jeans, socks, underwear, work out clothes, belts, shoes, sandals, boots, sneakers, girls dresses, blouses, sweaters, shorts, T shirts, Bathing suit, hats, scarves, gloves

Snack bucket: skittles, candy, chocolate, crackers, cookies, goldfish, chips, tortilla chips, granola bars, cereal, mac and cheese cups, ramen soup cups, micro wave popcorn, k cups, sugar, pudding cup (non refrigerated) cake in a mug

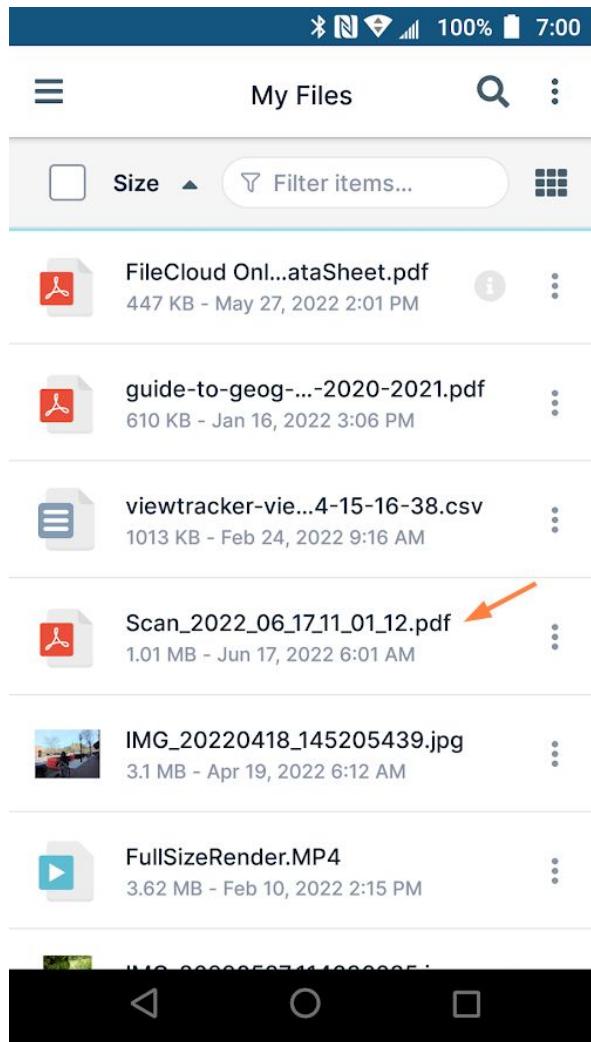

A **Save scan** dialog box opens.

9. You may change the file name, If you have only scanned one page, you are prompted to choose to save it as a pdf or jpg file; if you have scanned multiple pages, you can only save them as a pdf file.
10. Click **Confirm**.

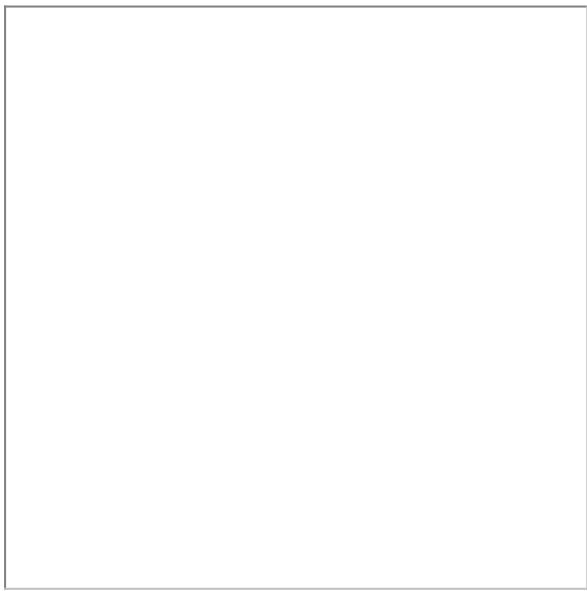

The file is saved in FileCloud.

Snap and Save a Picture in Android

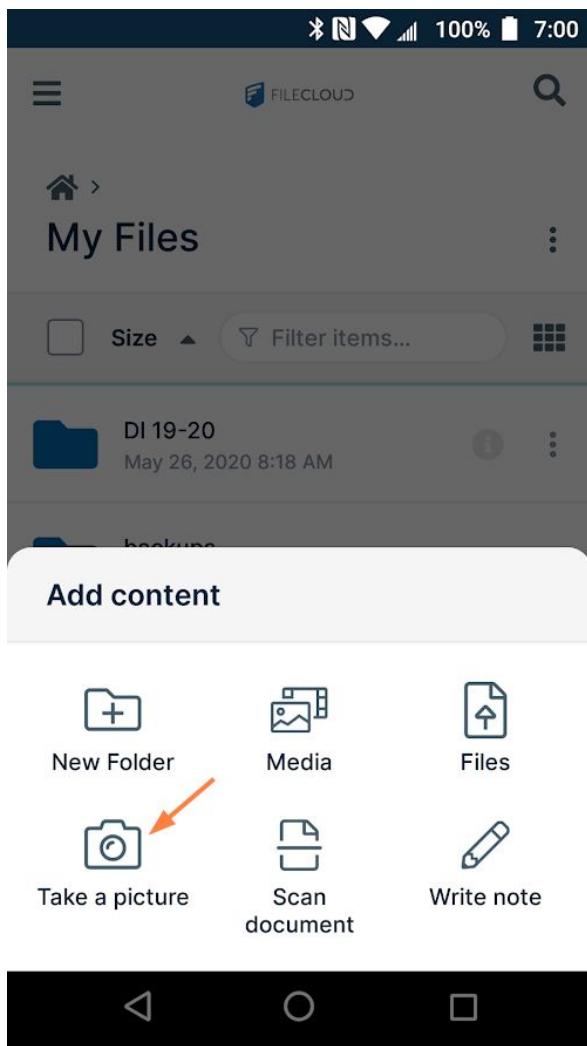

While you are working in the FileCloud Android app, you can take a picture and add it to FileCloud as a .jpg file.

1. Go to My Files or navigate to a My Files sub-folder.
2. Tap .

Add content options open.

3. Tap **Take a picture**.

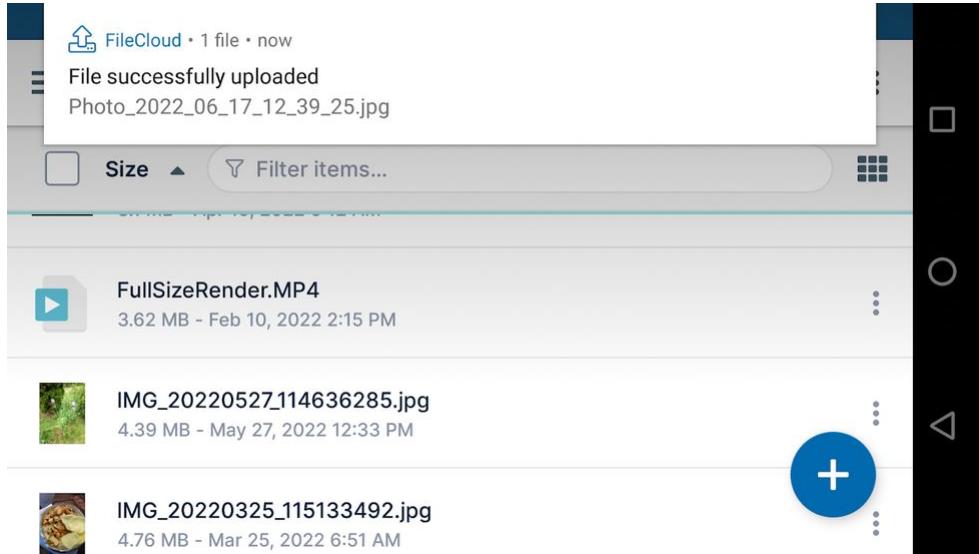

Your phone's camera opens.

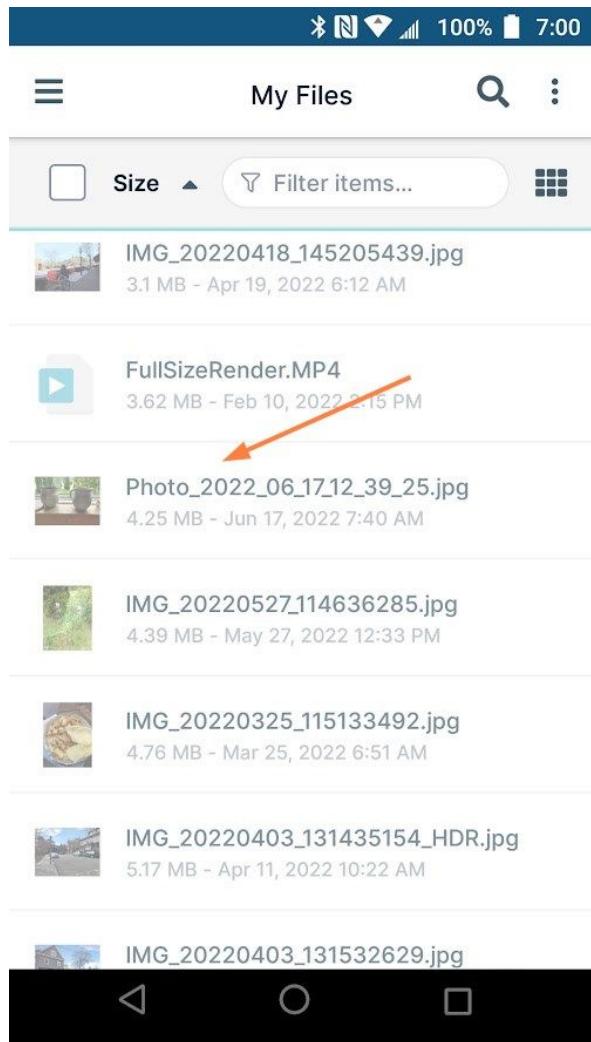

4. Take the photo.

You are notified of the stages in the uploading process.

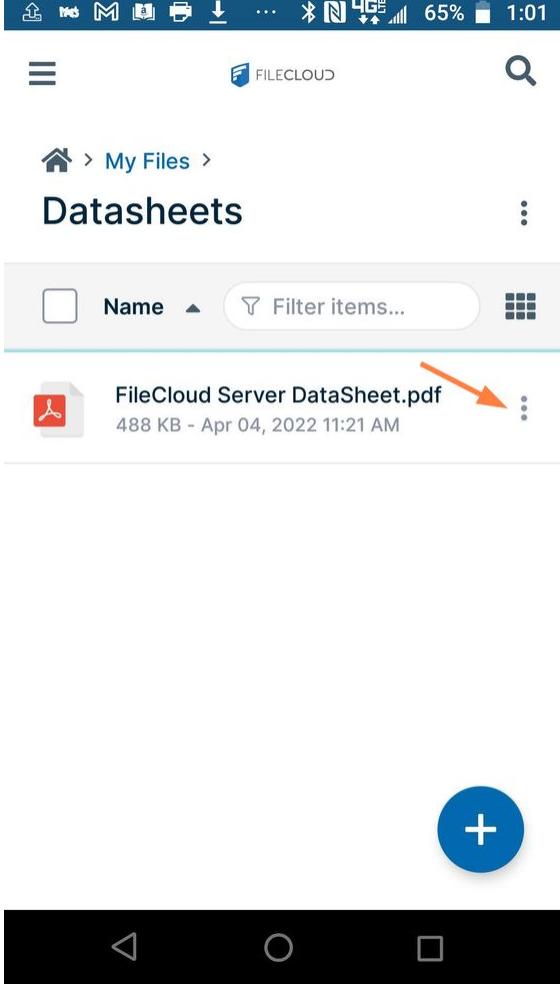

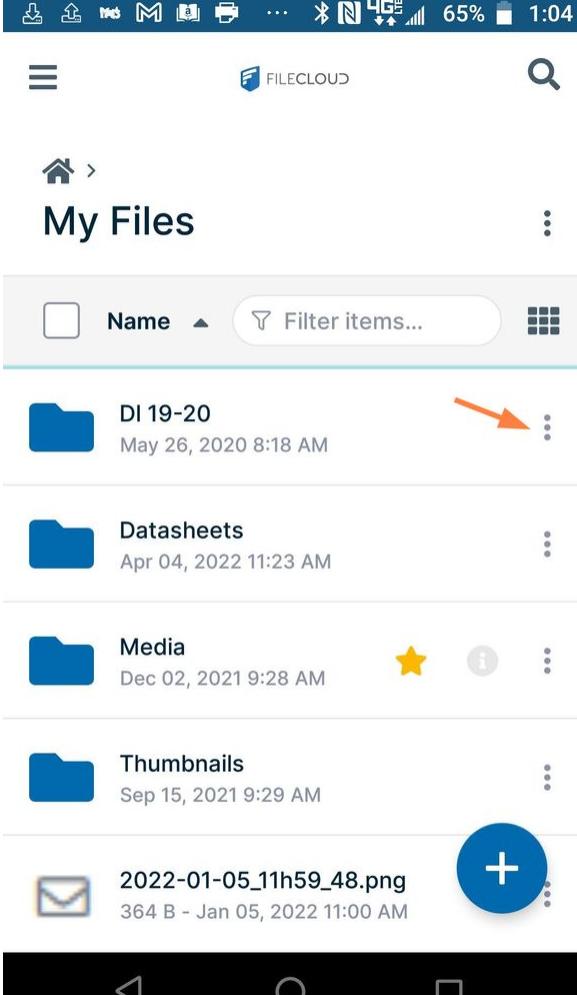

Once upload is complete the file appears in FileCloud.

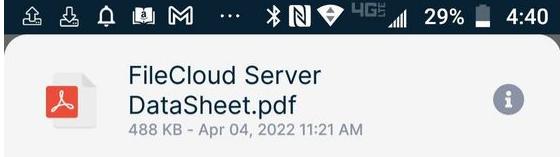

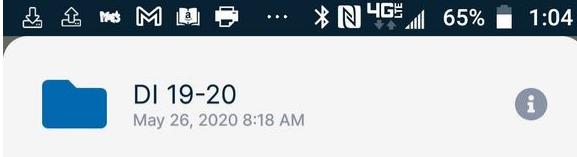

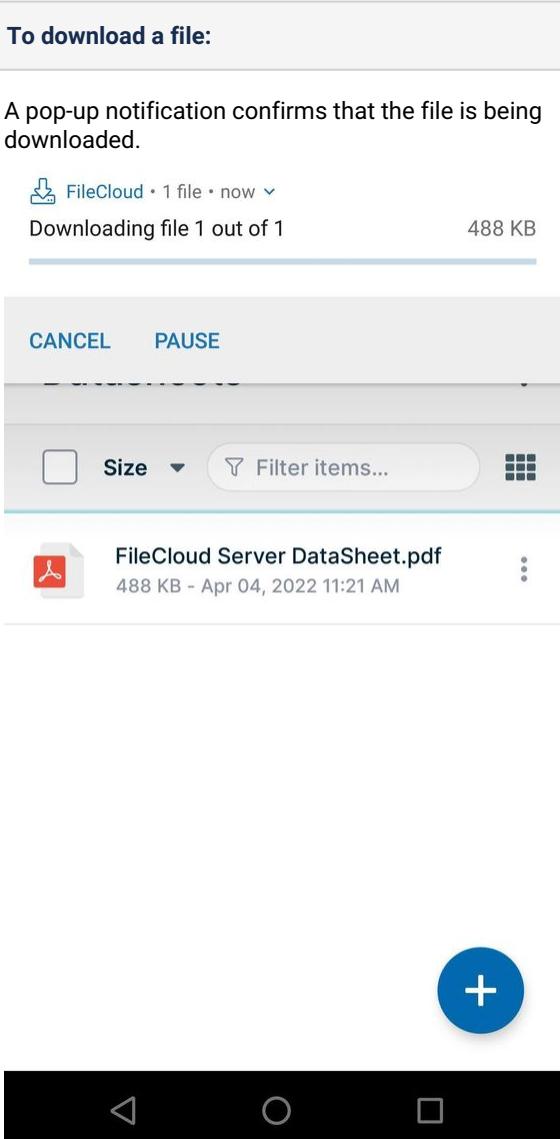

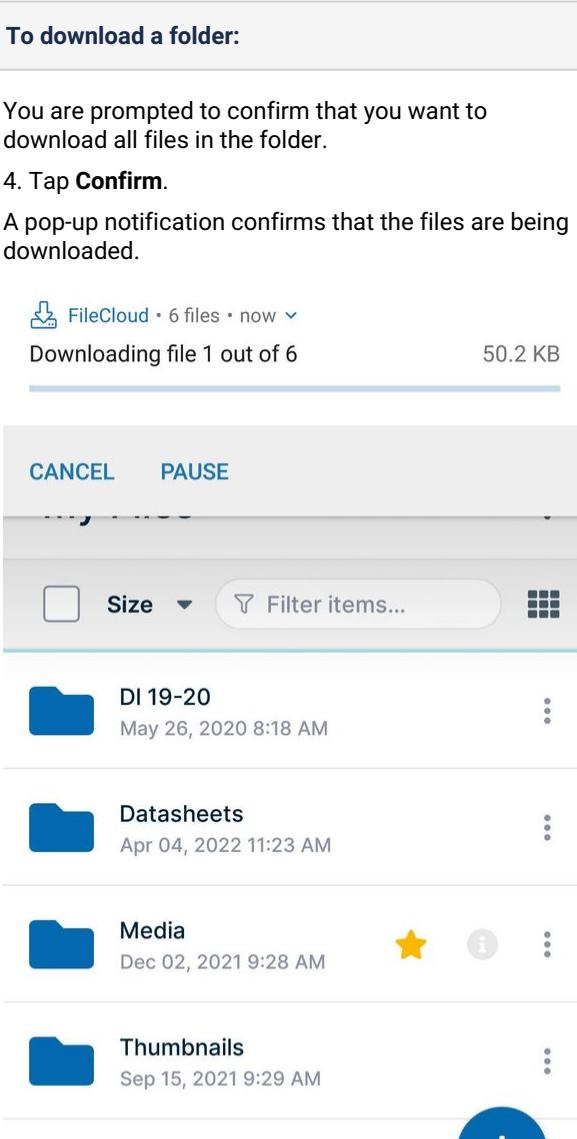

Download Files on Android

If you don't want to sync files, you can perform a one-time download of a file or all files in a folder.

To download a file:	To download a folder:
1. Open the FileCloud app.	1. Open the FileCloud app.

To download a file:	To download a folder:
<p>2. Open the folder where the file is located, and tap the more (3 dot) icon next to the file.</p>  <p>FileCloud Server DataSheet.pdf 488 KB - Apr 04, 2022 11:21 AM</p>	<p>2. To download a file:	To download a folder:
<p>A pop-up notification confirms that the file is being downloaded.</p>  <p>The file is saved to your default download location on Android. Set a default download location on Android (see page 321).</p>	<p>You are prompted to confirm that you want to download all files in the folder.</p> <p>4. Tap Confirm.</p> <p>A pop-up notification confirms that the files are being downloaded.</p>  <p>The files are saved to your default download location on Android.</p>

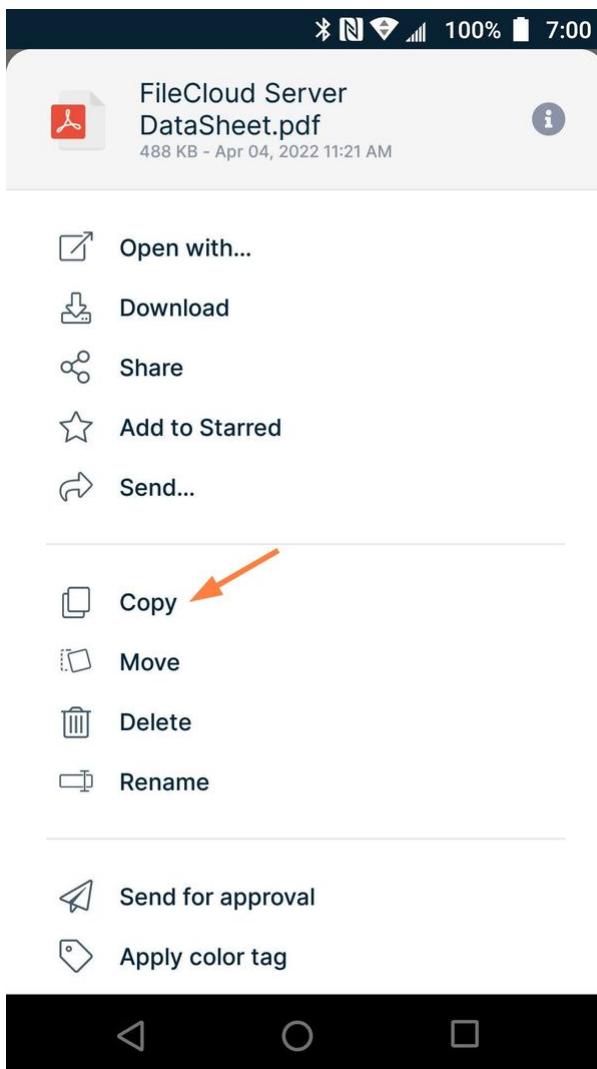

Copy and Paste Files or Folders on Android

To copy and paste files or folders:

1. Open the FileCloud App.
2. Navigate to the file or folder you want to copy.
3. Tap the more (three dot) icon next to the file or folder.

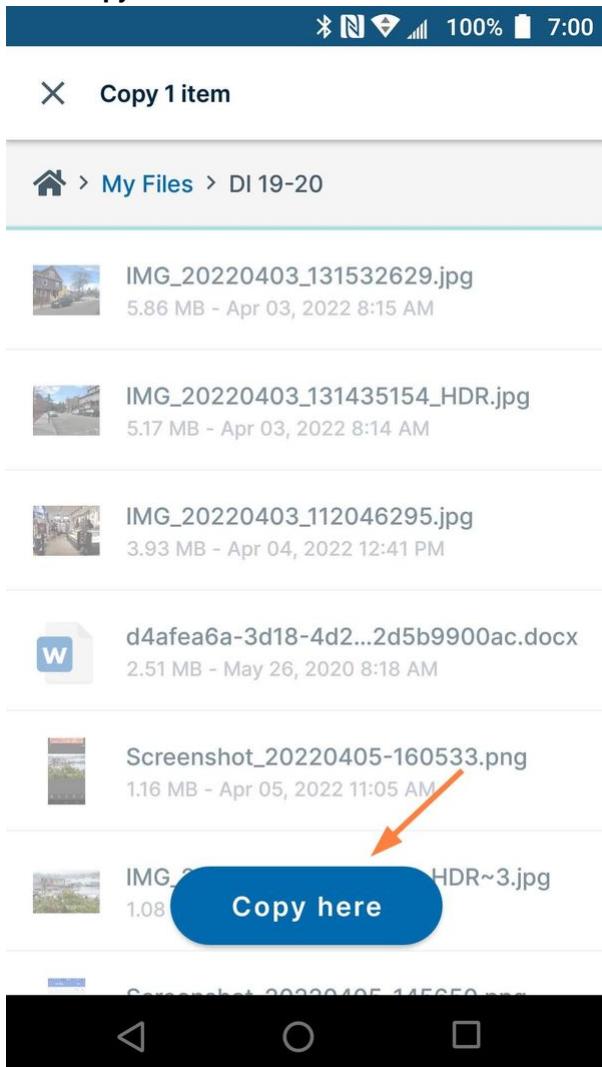

4. Tap copy.

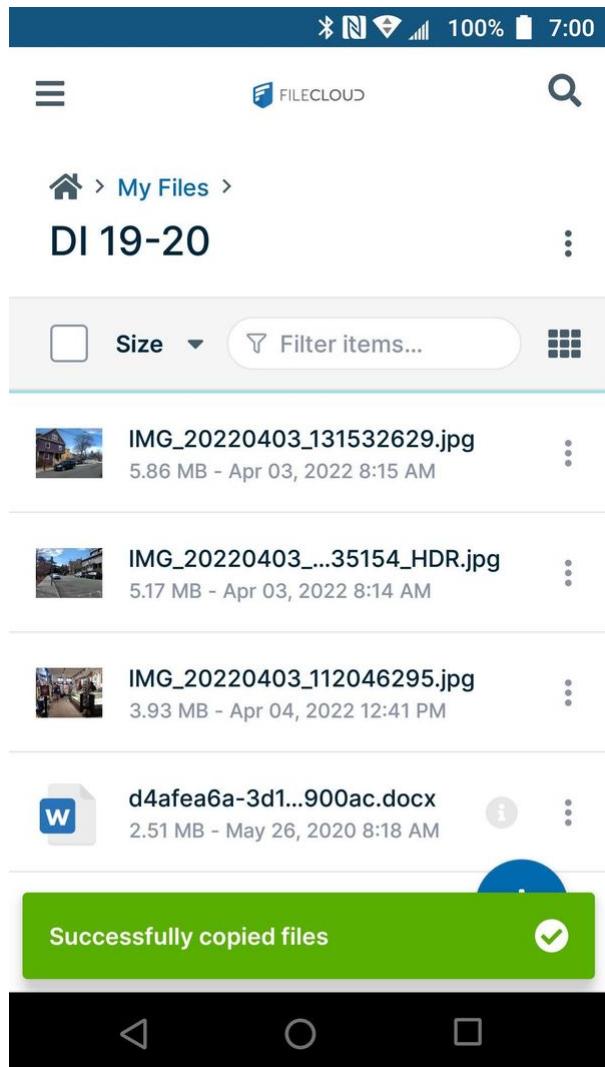

5. Navigate to the location where you want to copy the file or folder.

6. Click **Copy here**.

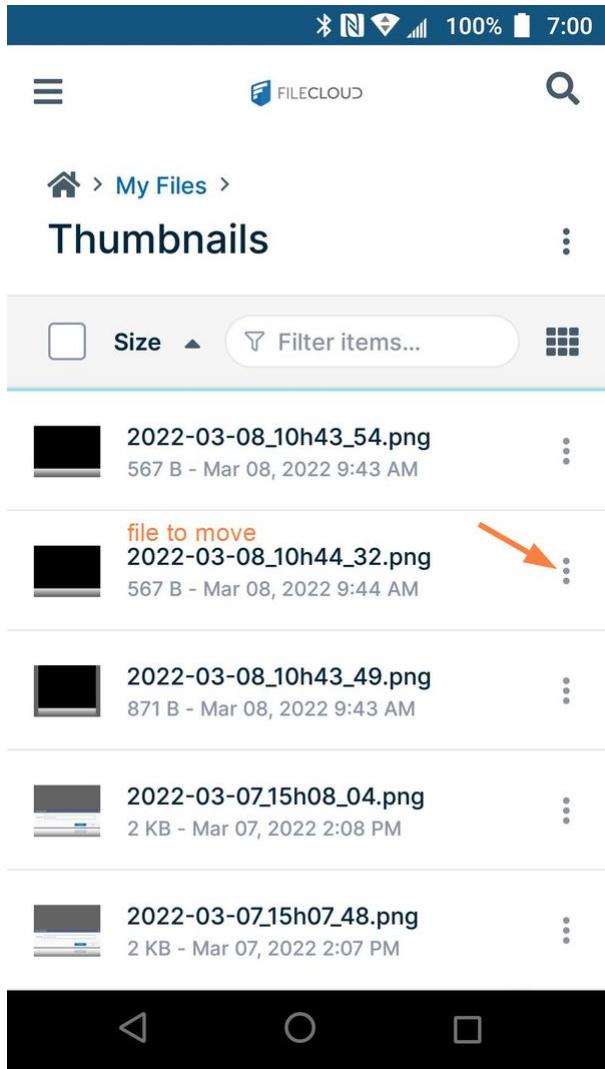

You are notified that the file or files in the folder have been copied to the location.

Move Files or Folders on Android

To move files:

1. Open the FileCloud App.
2. Navigate to the file or folder you want to move.
3. Tap the more (three dot) icon next to the file or folder.

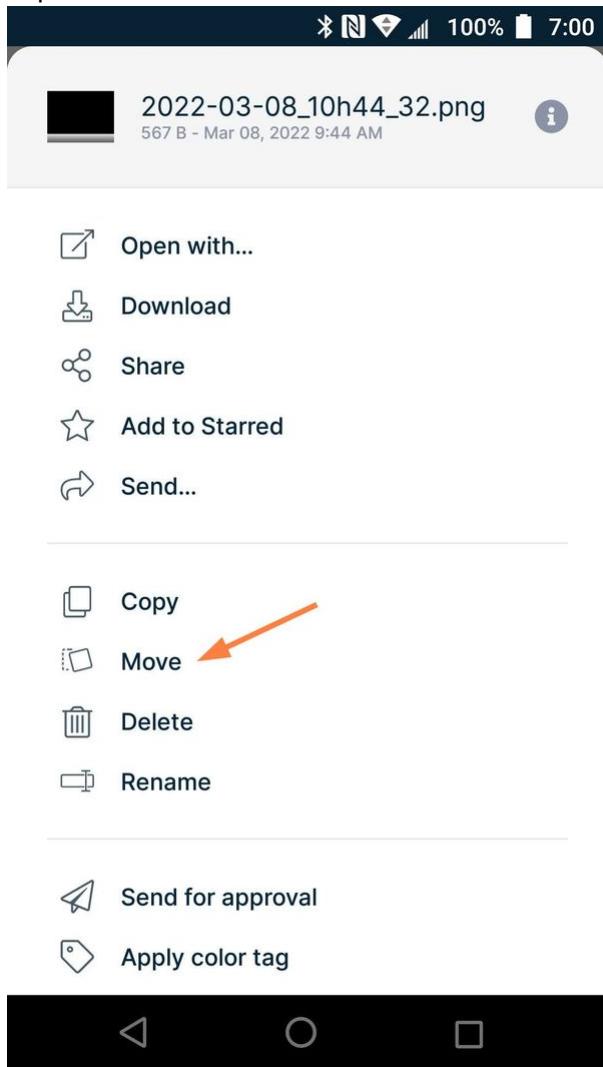

The screenshot shows the FileCloud mobile application interface. At the top, there is a blue header bar with icons for signal strength, battery level (100%), and the time (7:00). Below the header is the FileCloud logo. The main screen displays a list of files under the heading 'My Files > Thumbnails'. The list includes the following files:

- 2022-03-08_10h43_54.png (567 B - Mar 08, 2022 9:43 AM)
- 2022-03-08_10h44_32.png (567 B - Mar 08, 2022 9:44 AM) - This file is highlighted with an orange arrow pointing to its three-dot menu icon.
- 2022-03-08_10h43_49.png (871 B - Mar 08, 2022 9:43 AM)
- 2022-03-07_15h08_04.png (2 KB - Mar 07, 2022 2:08 PM)
- 2022-03-07_15h07_48.png (2 KB - Mar 07, 2022 2:07 PM)

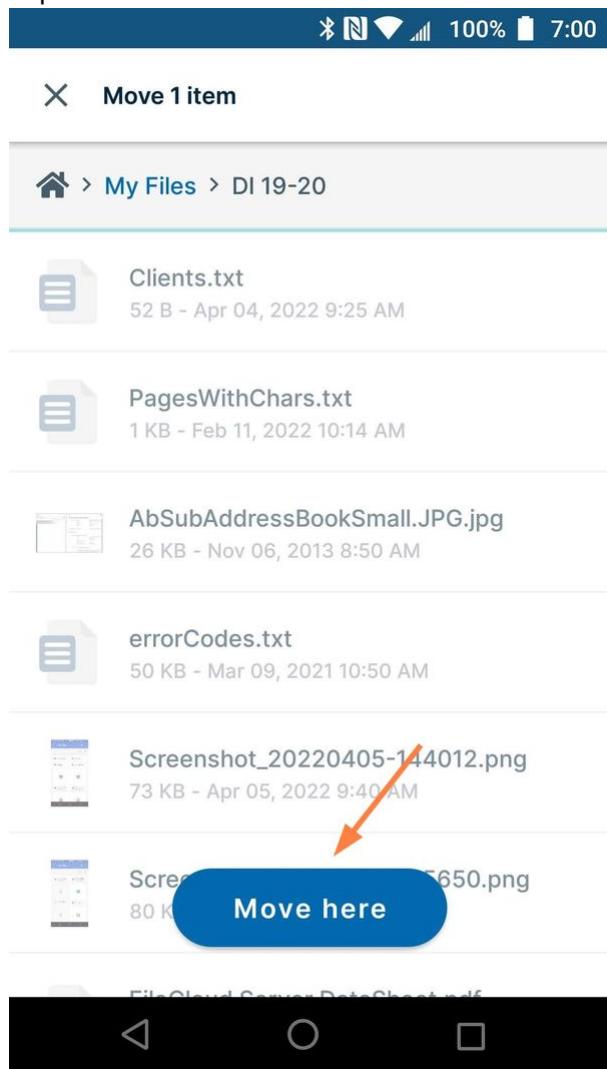

At the bottom of the screen are standard Android navigation buttons: a triangle (back), a circle (home), and a square (recent apps).

4. Tap **Move**.

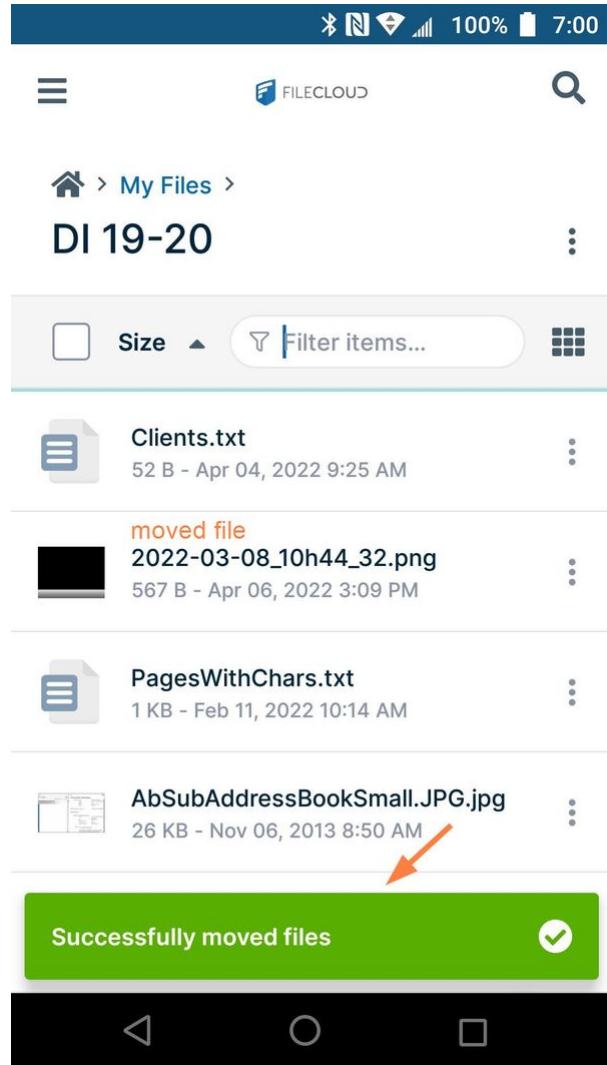

5. Navigate to the location where you want to move the file or folder.

6. Tap **Move here**.

You are notified that the file or files in the folder have been moved to the location.

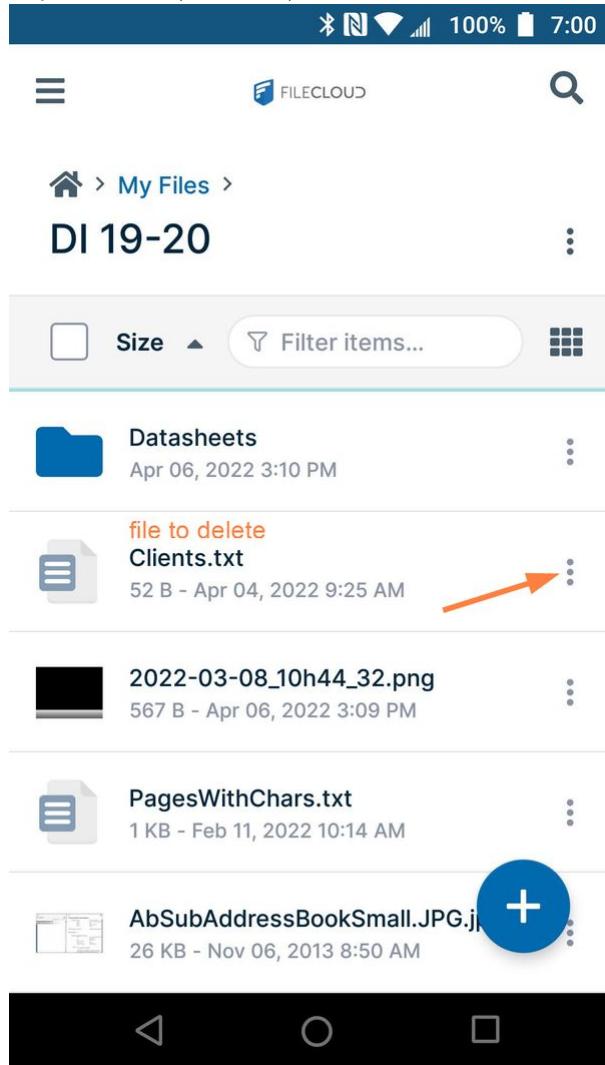

Delete Files or Folders on Android

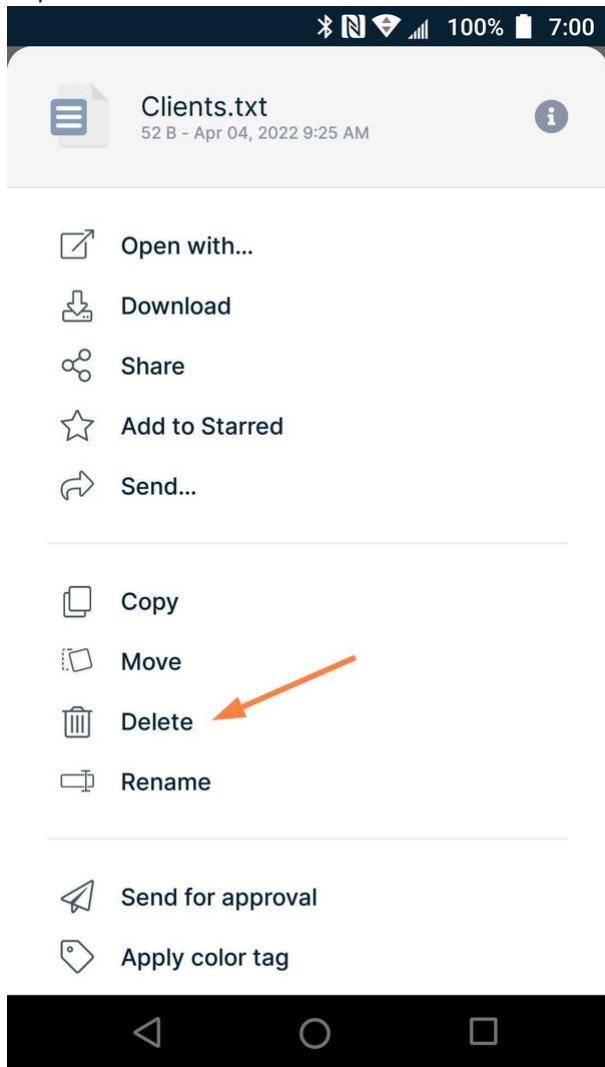

To delete files or folders permanently:

1. Open the FileCloud App.
2. Navigate to the file or folder you want to delete.

3. Tap the more (three dot) icon next to the file or folder.

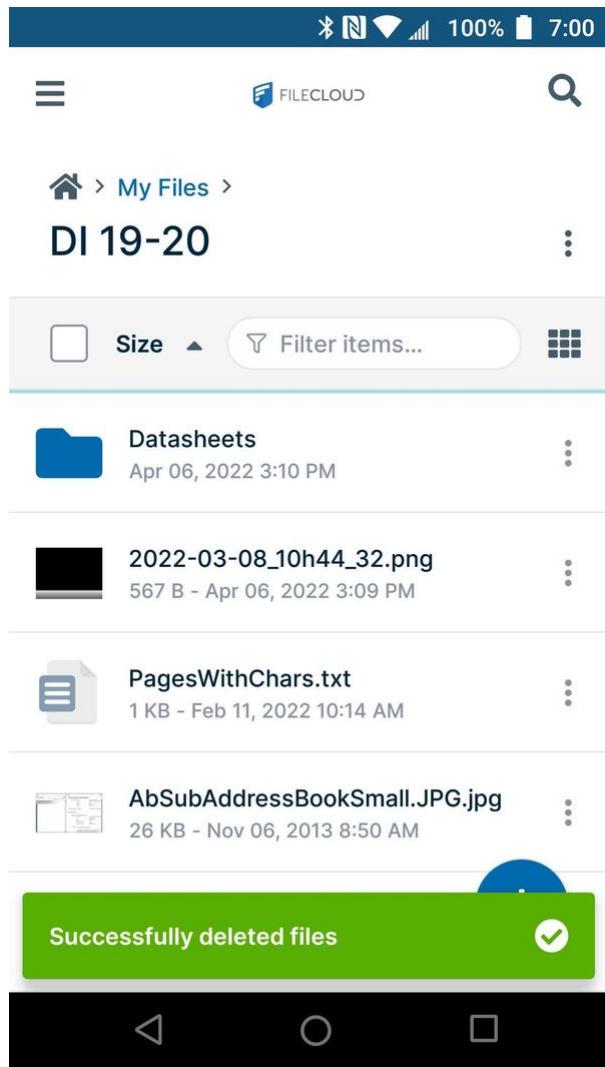

4. Tap **Delete**.

You are prompted to confirm.

5. Confirm the deletion.
6. You are notified that the file or files have been deleted.

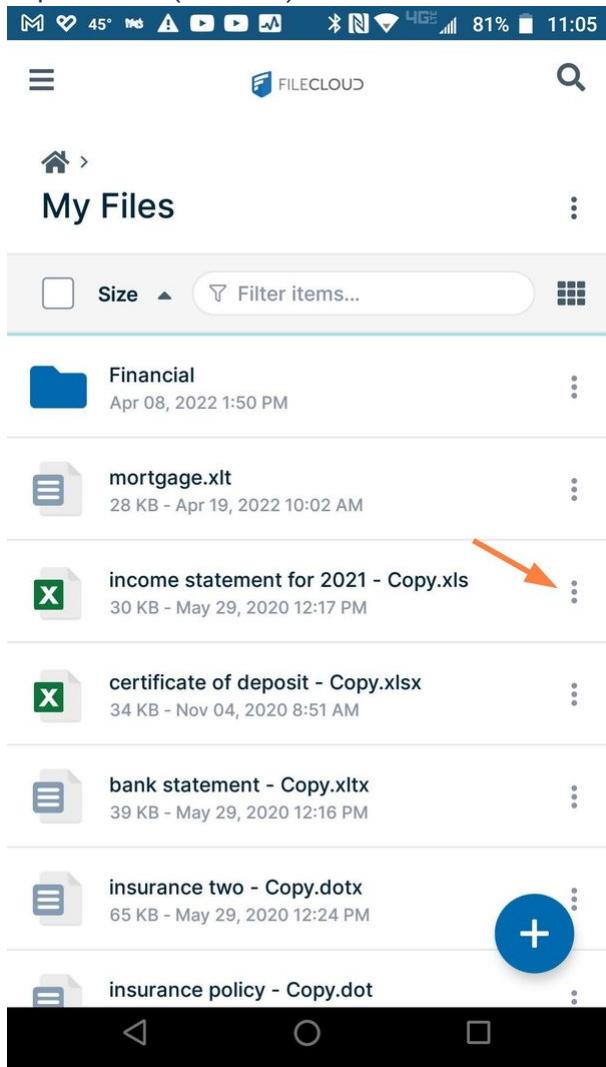

Note: If you are deleting a folder, the folder as well as the files in it are deleted.

Rename Files or Folders in Android

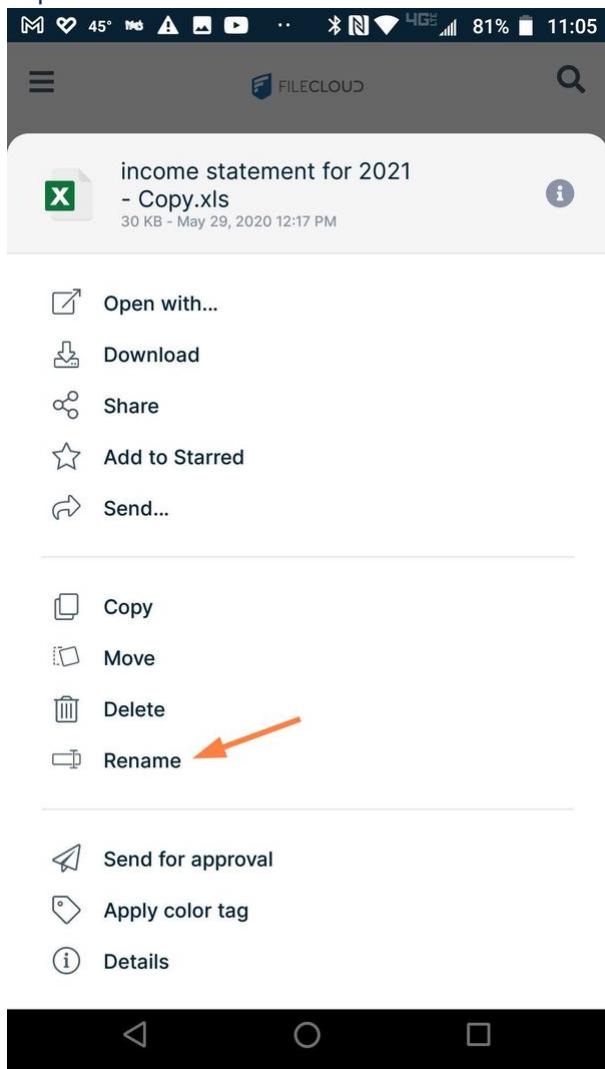

To rename files or folders:

1. Open the FileCloud App.
2. Navigate to the file or folder you want to delete.

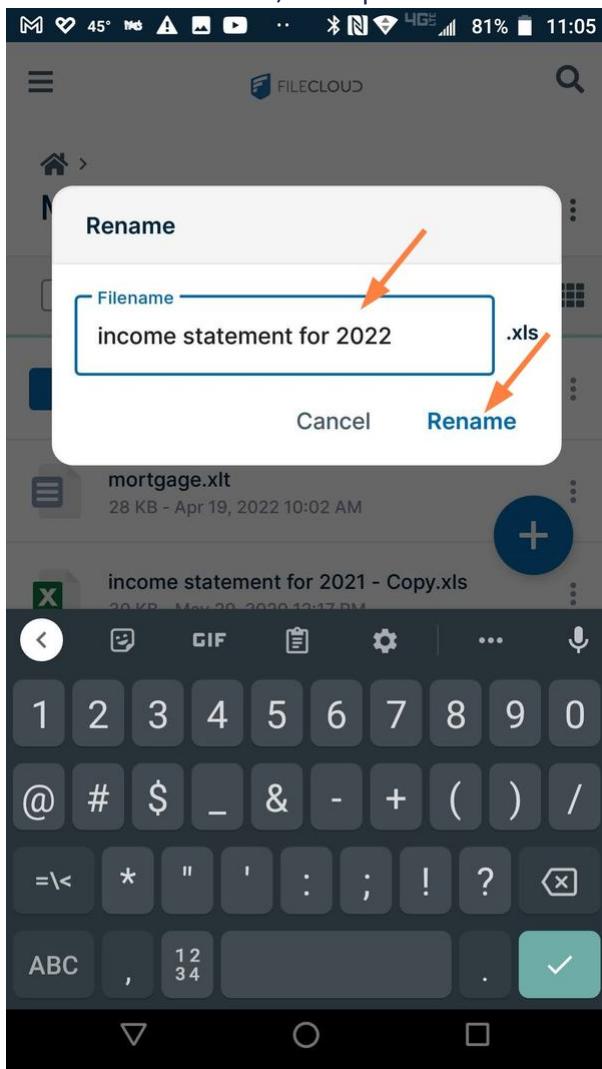

3. Tap the more (three dot) icon next to the file or folder.

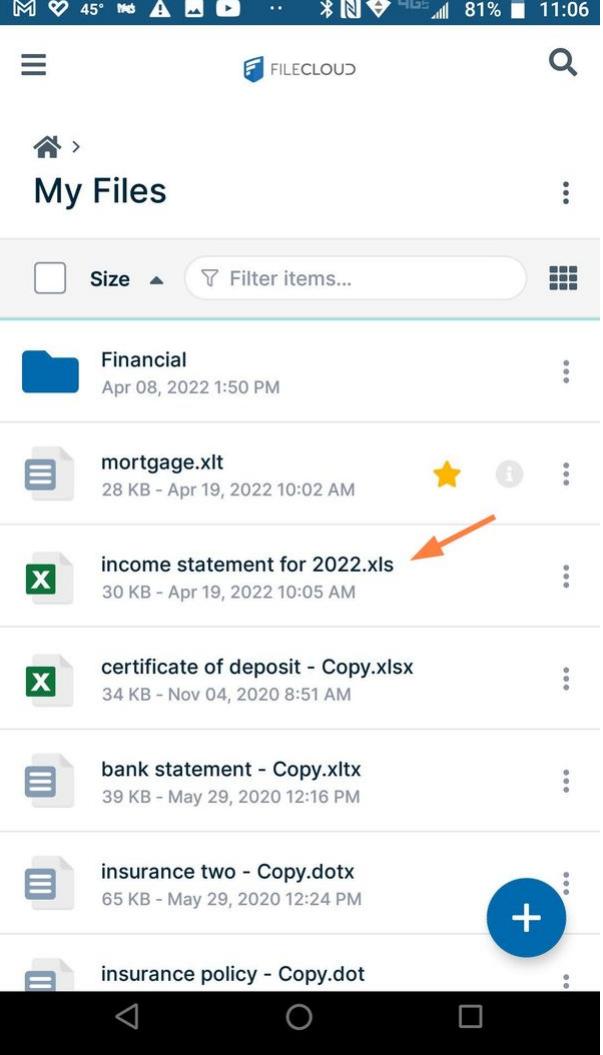

4. Tap **Rename**.

5. Enter the new filename, and tap **Rename**.

The file or folder is renamed.

To add a comment to a file or folder, click **Add**, and enter the comment in the text box. Note that you cannot tag a user in a comment added in Android as you can when you add a comment in the user portal.

Sending a File for Approval in Android

The ability to request file approval is available beginning in FileCloud 21.2.

Admins: Disabling file approval through user policies is available beginning in 23.241.6.

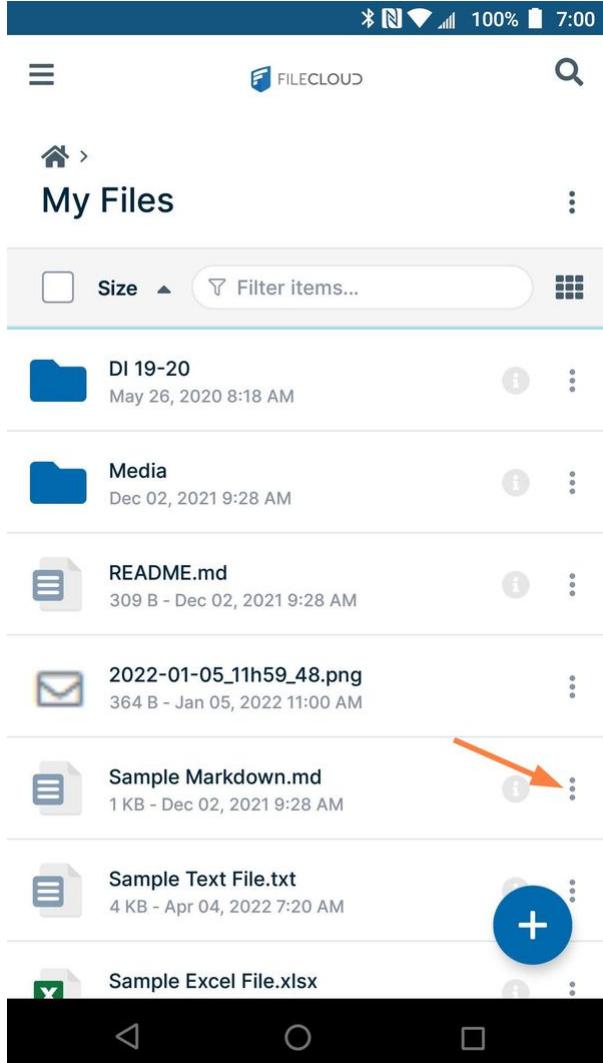

See [Disabling Send for Approval](#).

11. <https://www.filecloud.com/supportdocs/display/FCDOC/.Viewing+File+and+Folder+Information+in+Android+v2V>

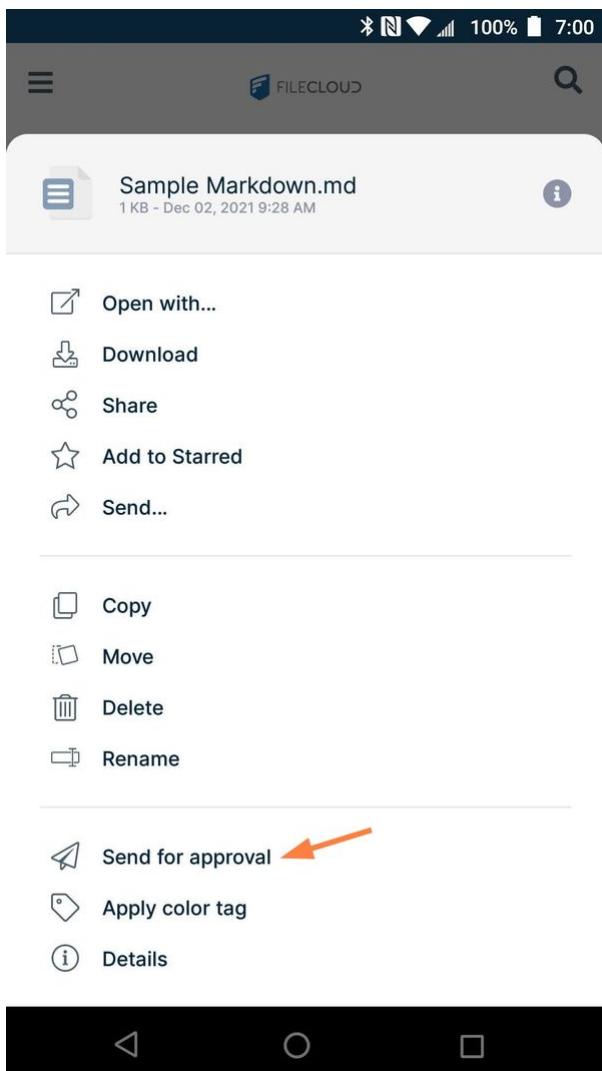

When you request that another user approve a file, you are notified of the approver's response, but the response does not alter the file's status.

To request approval of a file:

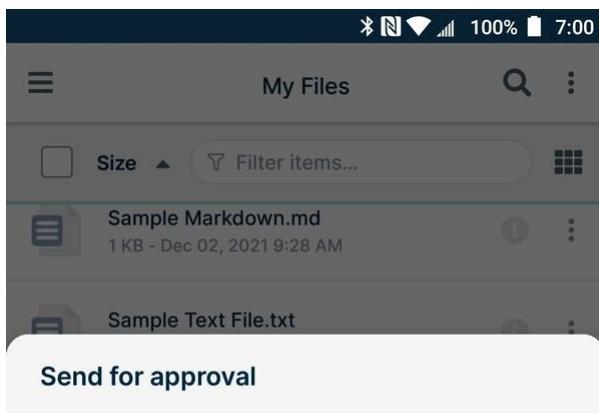

1. Log into the FileCloud app and navigate to the file that you want to send for approval.

2. Tap the More (3 dot) icon for the file, and then choose **Send for Approval**.

A **Send File for Approval** dialog box opens.

**Send to**

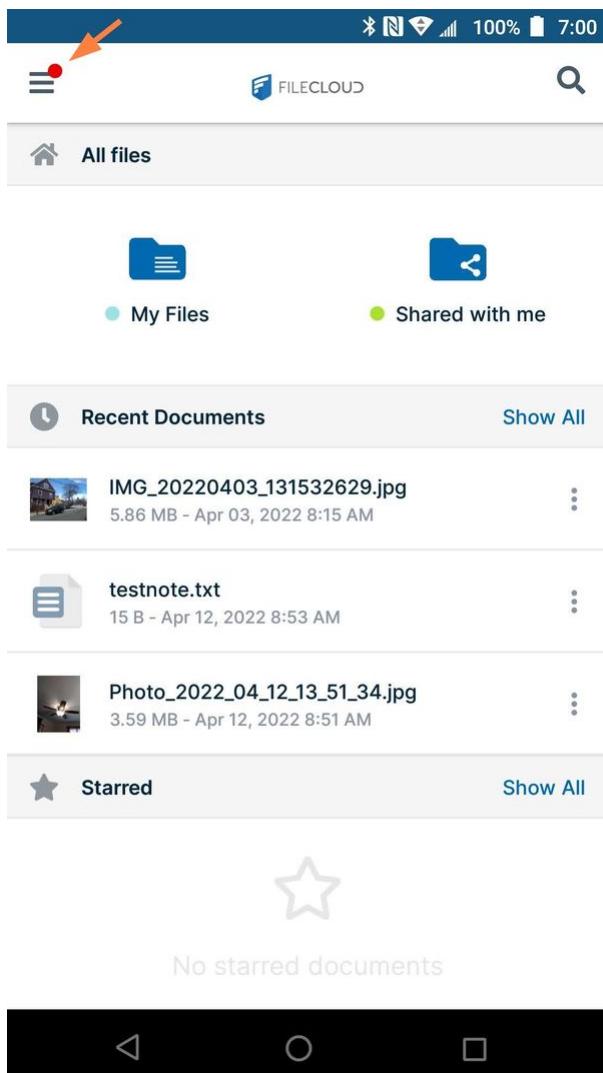

No users

Message**Attachments** Sample Markdown.md

3. In **Send to**, enter the usernames or email addresses of existing FileCloud users.
4. You may change the note in **Message** or leave the default of **Please, approve this file**.
5. Click **Confirm**.

The approval is sent to the approvers' inboxes in FileCloud.

The approver will receive a notification alert, and can proceed to approve or reject the file.

For instructions on approving or rejecting files, see [Approving files in Android \(see page 468\)](#).

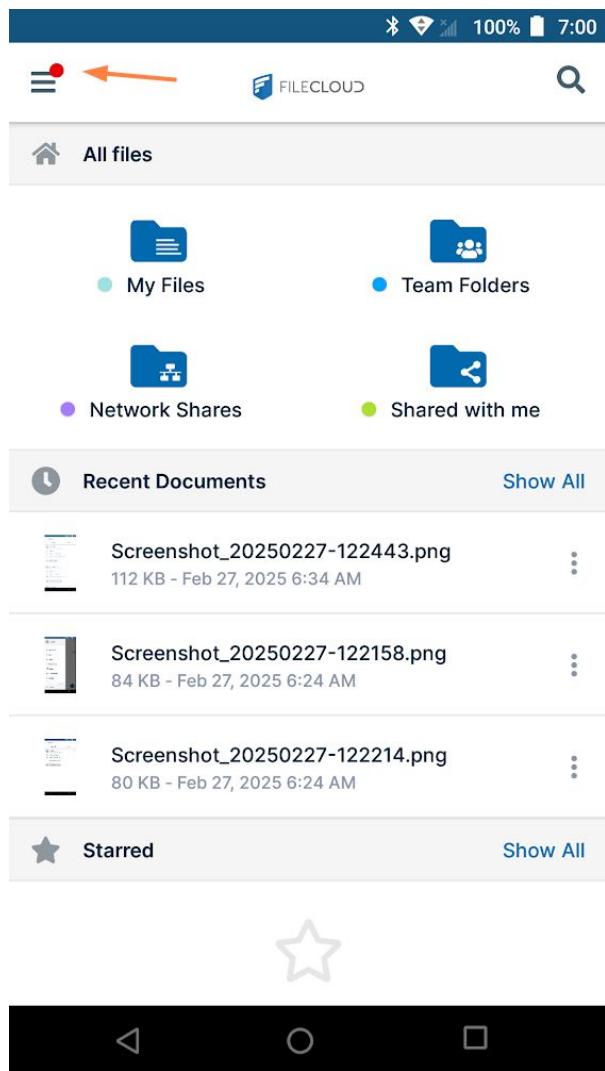

Approving files in Android

Users can send files to another user for approval and receive an approve or reject response. The response does not change the file's status; the person who requests approval can take any next action on the file whether it is approved or rejected.

From an Android device, you can check if files have been sent to you for approval and if files you have sent for approval have been approved or rejected. You can approve, reject, or send a comment about a file that has been sent to you for approval, and you can exchange comments with an approver that you have sent a file to.

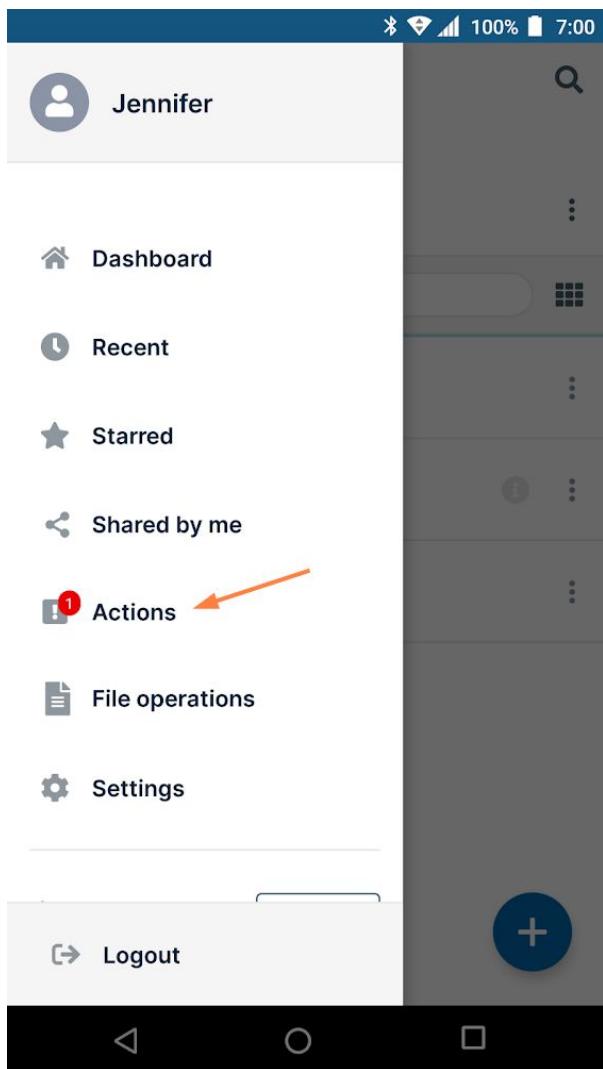

To check for approve activities on your Android:

1. Log into the FileCloud app on your Android.
A red dot overlays the menu icon in the upper-left corner to indicate that a file is awaiting your approval.
2. Tap the menu icon.

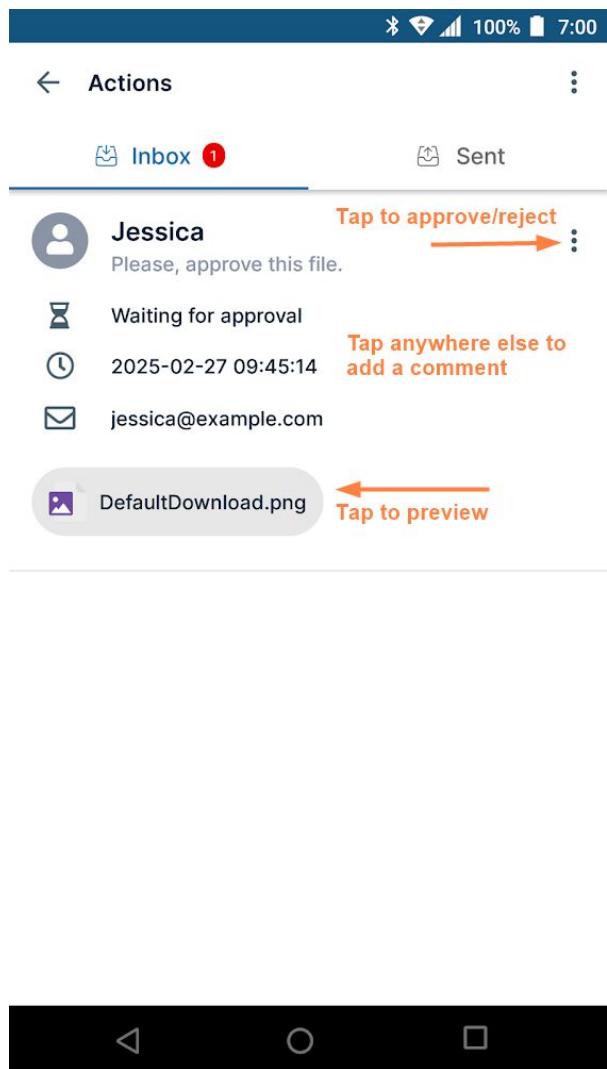

The navigation panel opens. A red dot with the number of files awaiting your approval overlays the **Actions** link.

3. Tap the **Actions** link.

The **Actions** screen opens to the **Inbox** tab. The **Inbox** tab shows files waiting for your approval. From here, you can either approve or reject a file, view details, add a comment, or preview it.

4. Click the **Sent** tab to see files that you have sent for approval.
Status is either **In review**, **Rejected**, or **Approved**.

From here, you can preview the file, view details, or add a comment.

To approve or reject a file

1. In your Android, go to the **Actions** screen.
2. In the Inbox, tap the more (triple-dot) icon to the right of a file waiting for approval.

The screenshot shows the FileCloud mobile application interface. At the top, there is a red status bar with icons for signal strength, battery level (100%), and the time (7:00). Below the status bar, the title "Actions" is displayed with a back arrow icon. To the right of the title is a three-dot menu icon. Underneath, there are two tabs: "Inbox" (with a red notification badge showing "2") and "Sent". The "Inbox" tab is selected, indicated by a blue underline. Below the tabs, there are two approval requests listed:

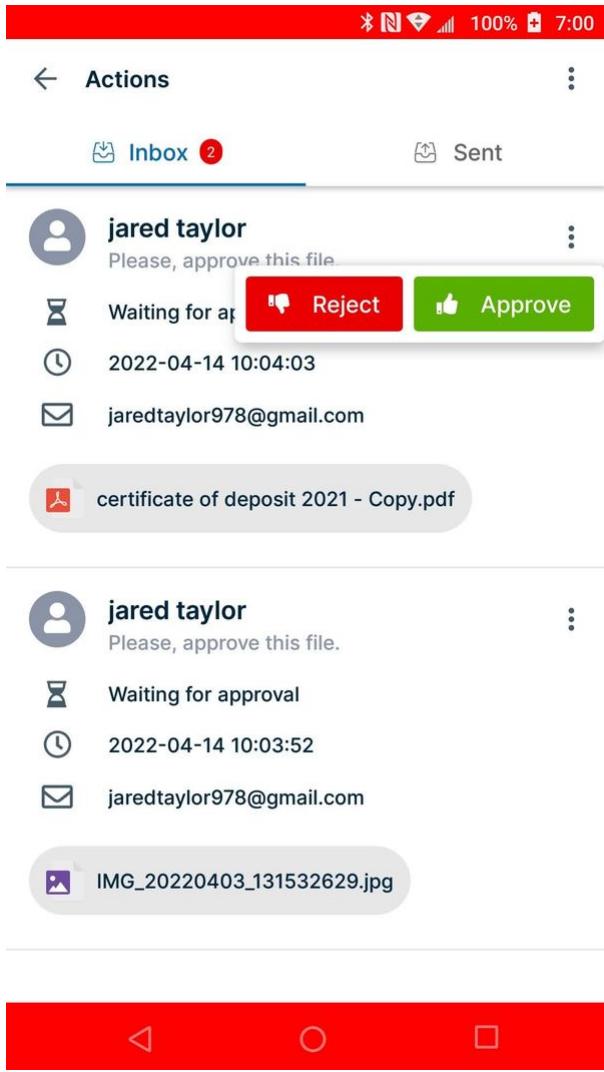

1. jared taylor
Please, approve this file.

◀ ○ □

To preview a file

You can preview a file that has been sent for approval, whether or not it has been acted on yet, in your **Inbox** or **Sent** tab.

1. In your Android, go to the **Actions** screen.
2. Go to the tab where the file appears.
3. Tap the filename.

Depending on the file type, FileCloud either opens it immediately for preview or prompts you to choose an application to open it in. For information about how different file types are previewed in Android, see [Previewing and Editing Your Files in Android](#) (see page 326).

Media Sync/Photo Backup on Android

You can use the FileCloud app to sync media (automatically back up photos and videos) to the FileCloud server in the background.

- The FileCloud app will automatically detect new photos and videos and back them up to the selected location.

To enable automatic backup, you either need an administrator account or your administrator has to configure this setting for you.

To configure automatic backup of photos and videos:

1. Configure the Admin Settings

To configure the administrator settings:

1. In the FileCloud admin portal's left navigation bar, scroll down and click **Settings**. Then, on

the **Settings** navigation page, click **Endpoint Backup**  .

The **Endpoint Backup** settings page opens.

2. Enable **Allow camera uploads**.

Endpoint Backup

[Reset to defaults](#)

Allow users to back up

Enable users to back up with FileCloud Sync app.

Allow camera uploads

Allow automatic backup of photos and videos from mobile devices.

Backup path

Root storage path for user backups. Admin can override in user details. If 'My Files' is disabled, admin must specify a new path in user details for each user.

`/$USERNAME/backups/`

Backup notification email

Email for notification of backup status

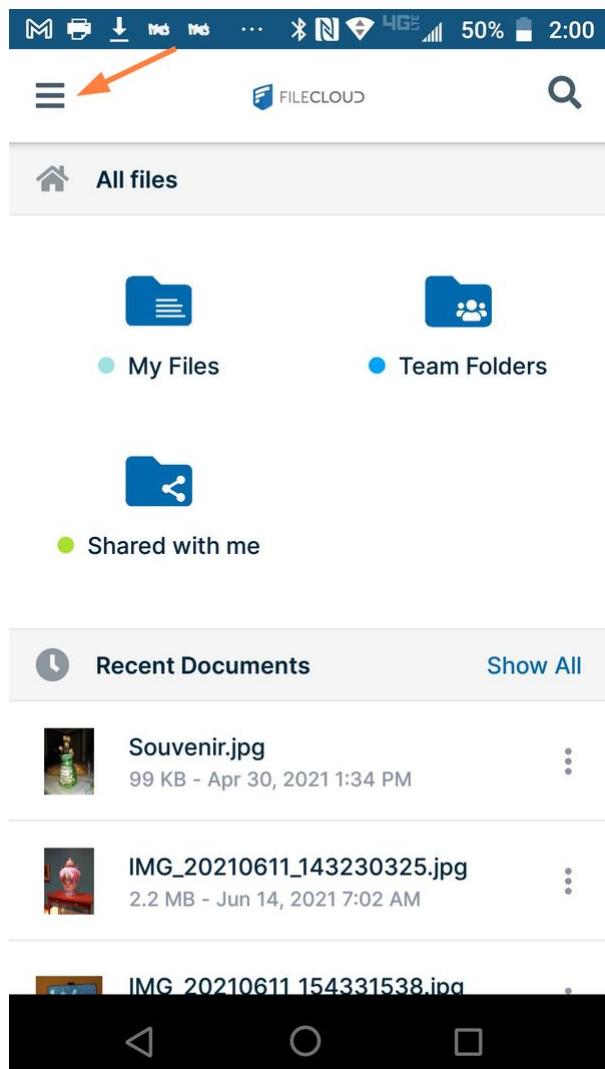

`Backup Email`

3. Click **Save**.

2. Configure Your Android Device

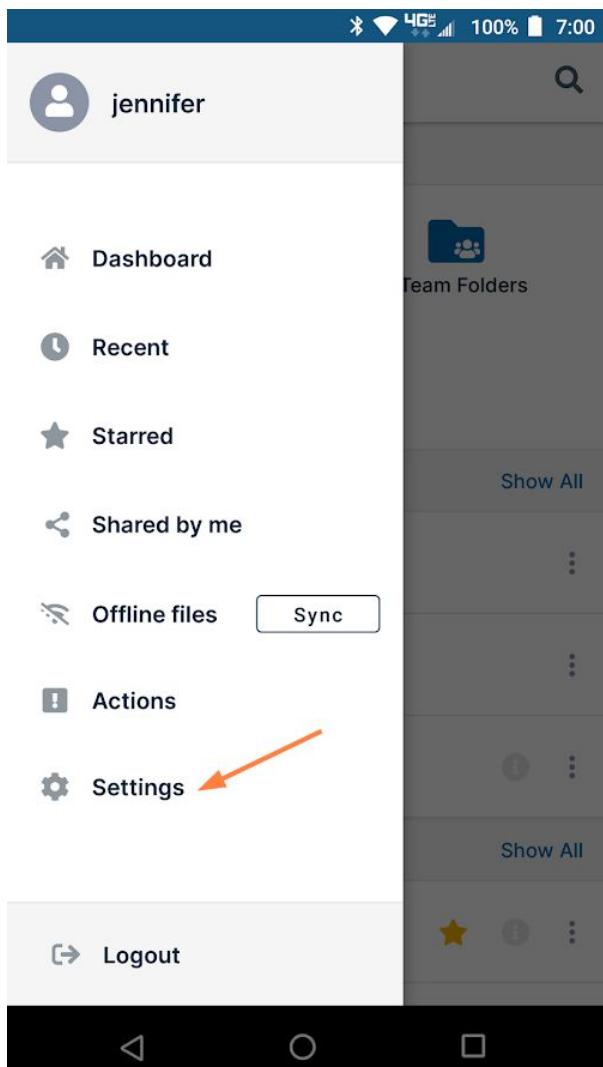

To configure your Android device:

1. Open the FileCloud app.
2. In the upper-left corner, tap the menu icon.

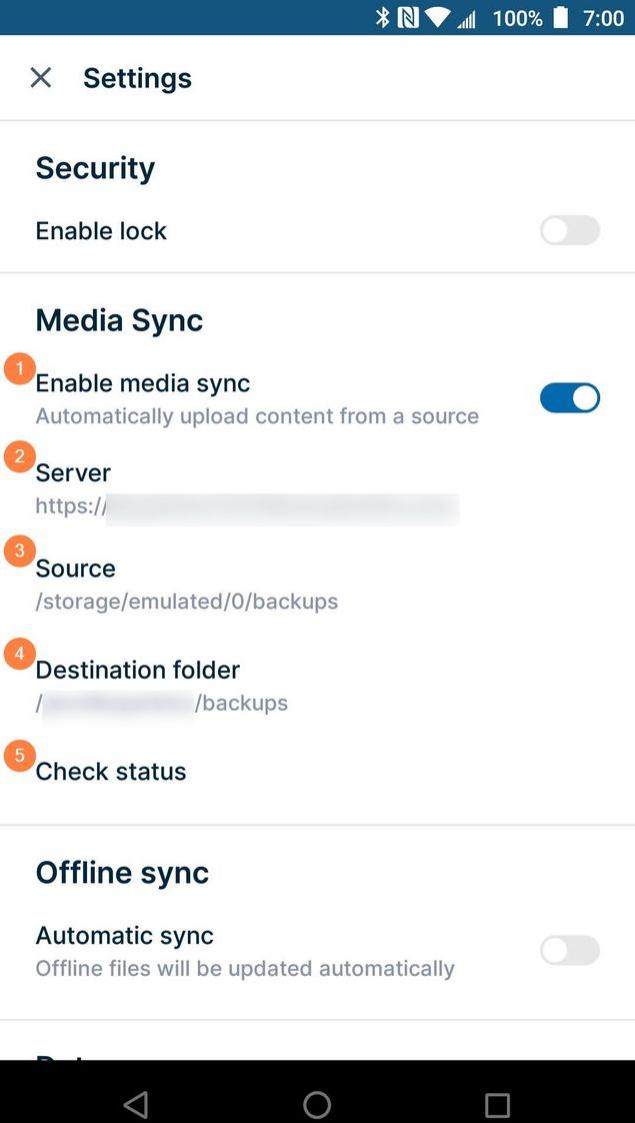

A list of options opens.

3. Click **Settings**.

4. In the list of settings, slide the **Media Sync** switch to the right so that it is on. Although **Media Sync** has multiple options, the only one required to set up automatic backup is **Server**.
5. Tap **Server**. Choose a server to select it as the backup server.
6. Set any of the other options shown in the table below.

1 Enable media sync - Turns media sync on.

2 Server - (required) The backup server.

3 Source - (optional) The local folder the app retrieves pictures from for backup. By default, your Android's main camera folder is used.

4 Destination folder - (read-only) Displays the path to the server folder your media is uploaded to and stored for backup.

5 Check status - Displays a dialog box with information about the current status of media uploads.

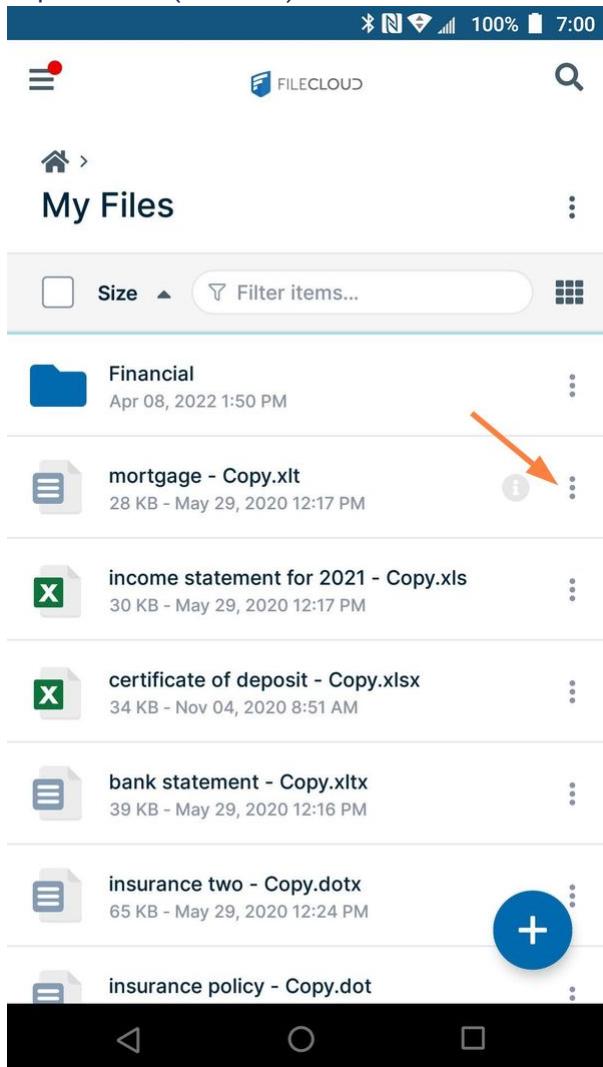

Star a File or Folder

You can star your favorite files and folders in FileCloud. The Starred folder appears when you initially log in on Android, and when you tap **Starred** in the navigation pane.

To add a file to starred:

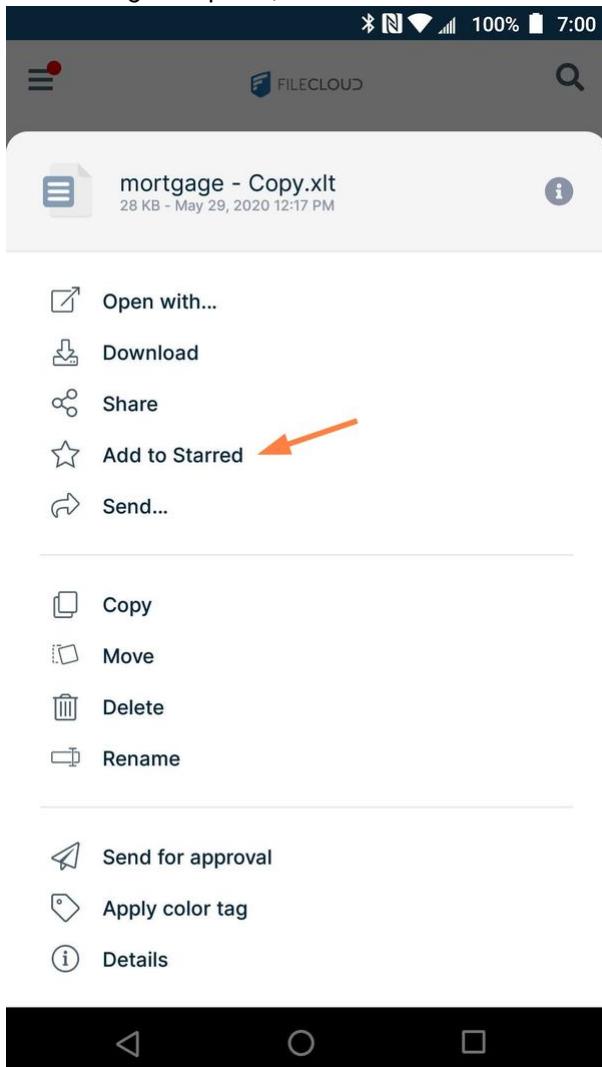

1. Open the FileCloud App.
2. Navigate to the file or folder you want to star.

3. Tap the more (three dot) icon next to the file or folder.

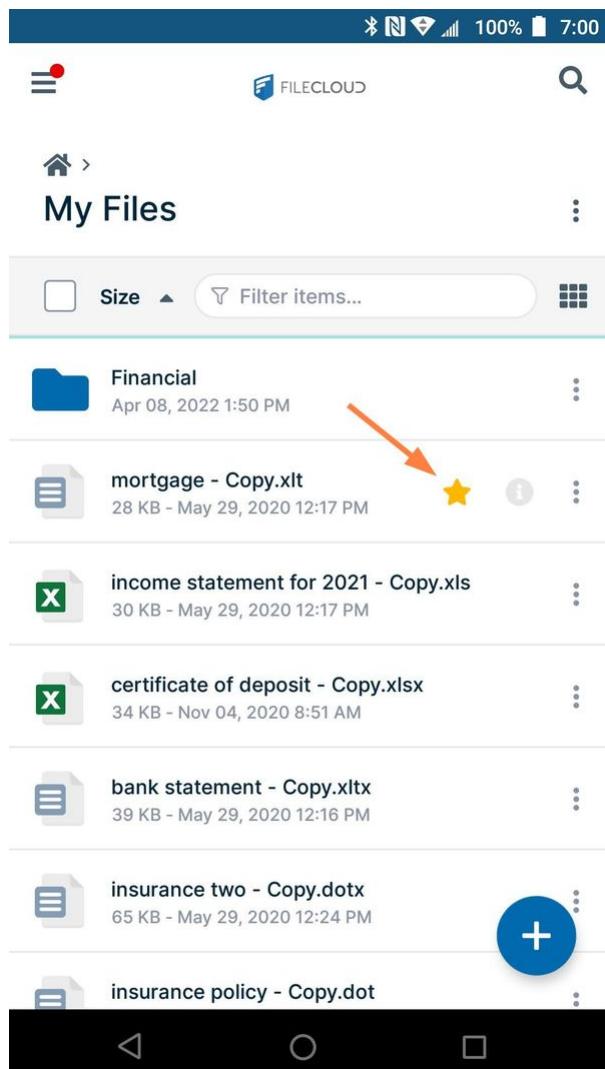

The navigation panel opens.

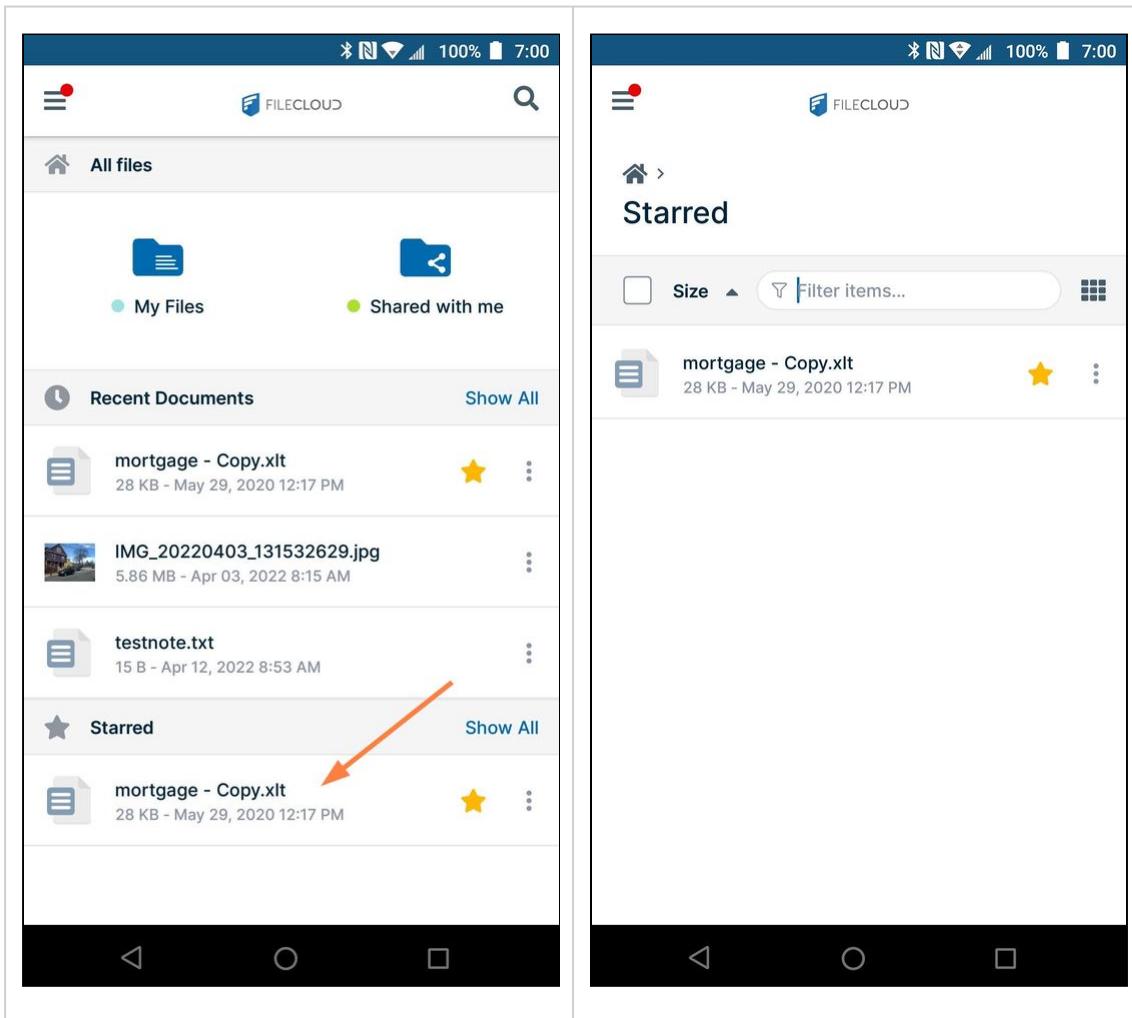

4. In the navigation panel, click **Add to Starred**.

Now a star appears next to the file or folder:

and when you first log in to FileCloud on Android or when you click **Starred** in the navigation pane it appears in the list of **Starred** files and folders.

Searching on FileCloud Android

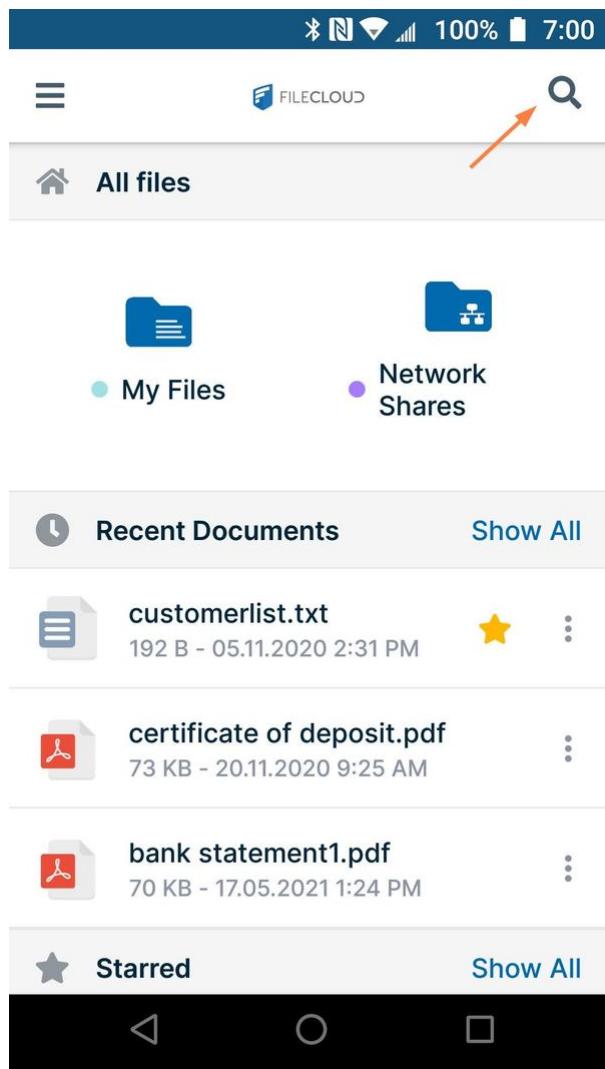

File and folder name search as well as content search are available in FileCloud on Android; however, the content search feature is only available if it is configured in your system. Searching is case-insensitive.

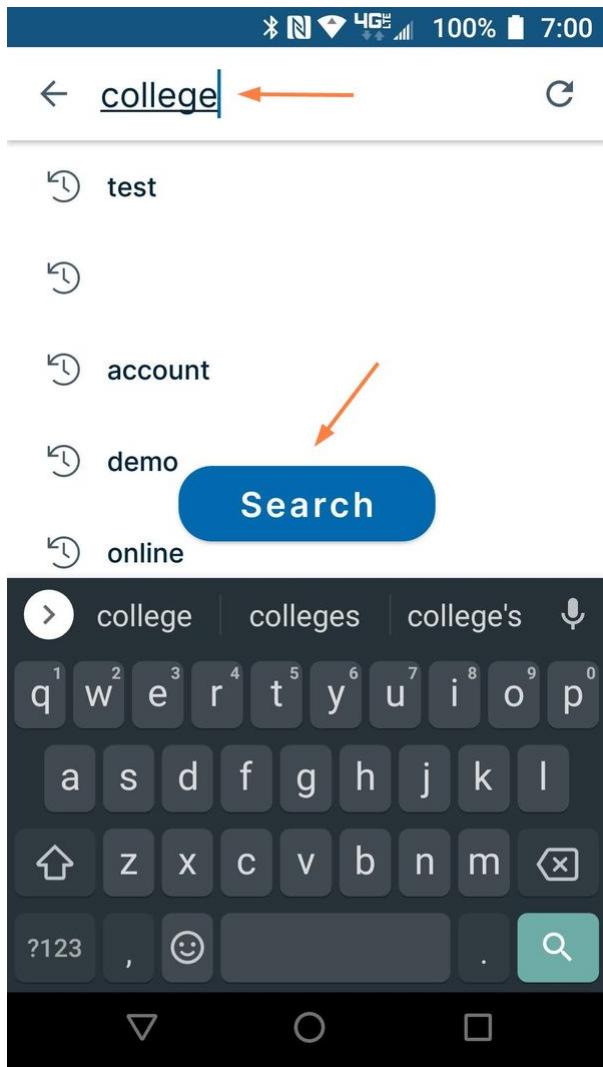

Content search hits are returned with the matching string emphasized except in the case of lengthy search results, where omitting emphasis achieves quicker response time.

To perform a search:

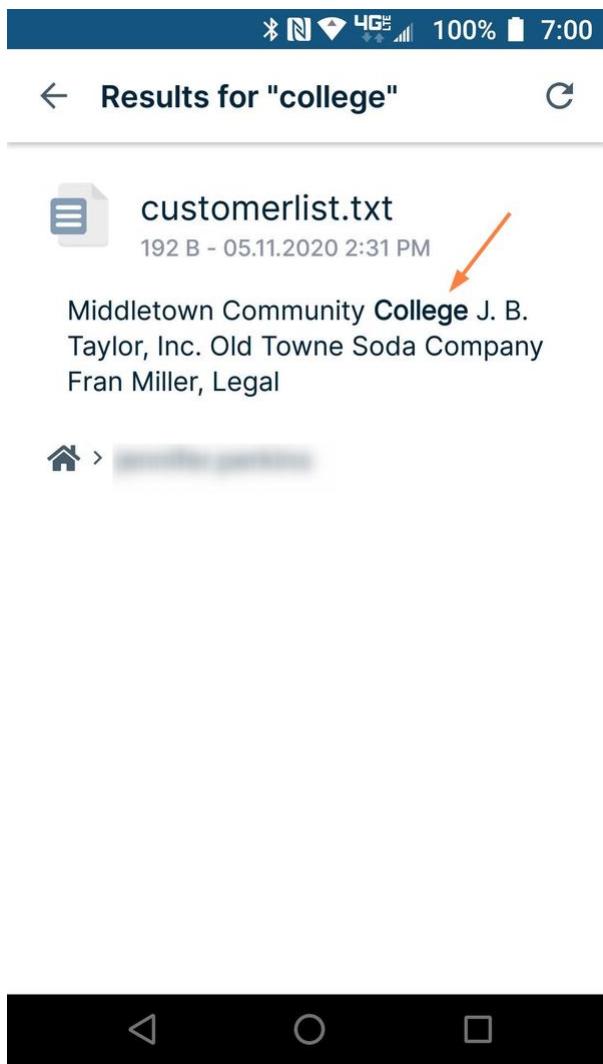

1. In the FileCloud Android app, navigate to the folder that you want to search, or remain in **All files** to search all files and folders.
2. Tap the Search icon in the upper right corner.

3. Enter your search term, and tap **Search**.

Your search results are listed. Content search results are bolded.

Apply Color Tag Metadata in Android

Color tag metadata enables you to assign colors to files and folder for categorization and searching.

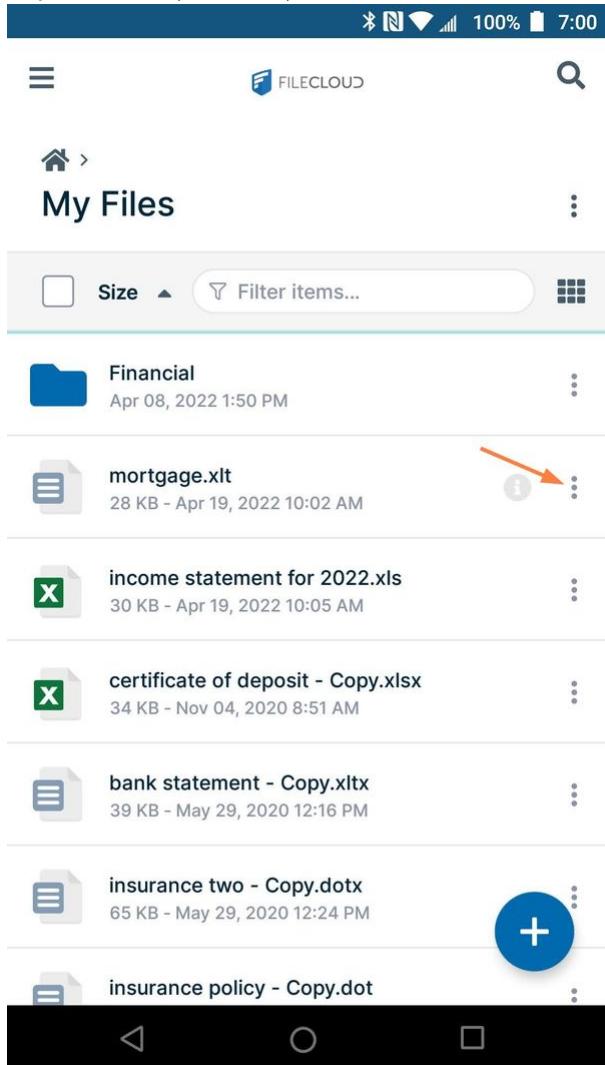

For admins

For more information about color tag metadata, see [Working with Built-In Metadata](#).

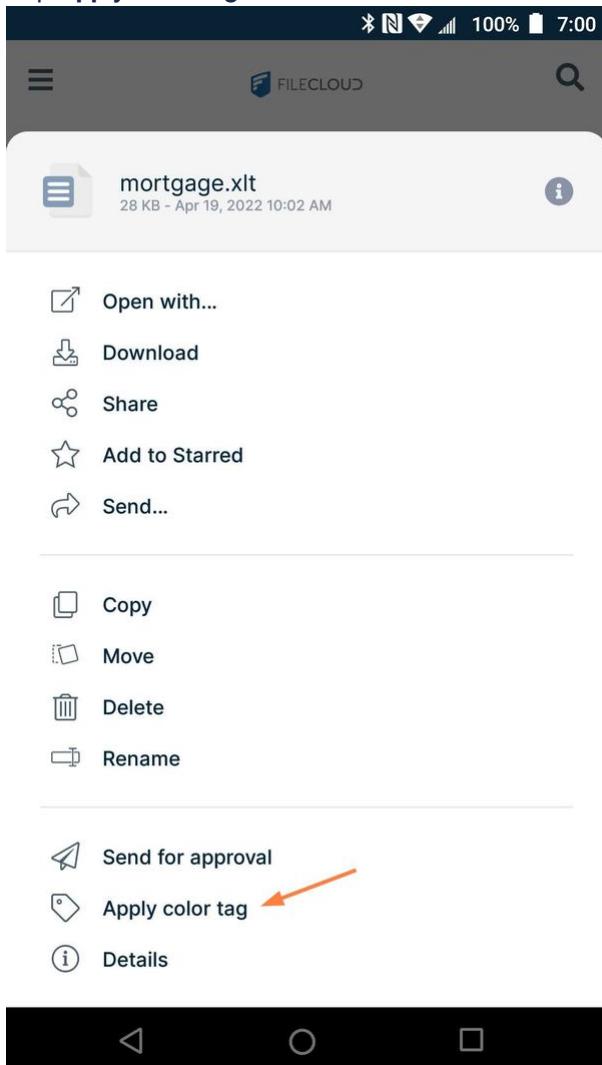

To apply a color tag to a file or folder:

1. Open the FileCloud App.
2. Navigate to the file or folder you want to apply the color tag to.

3. Tap the more (three dot) icon next to the file or folder.

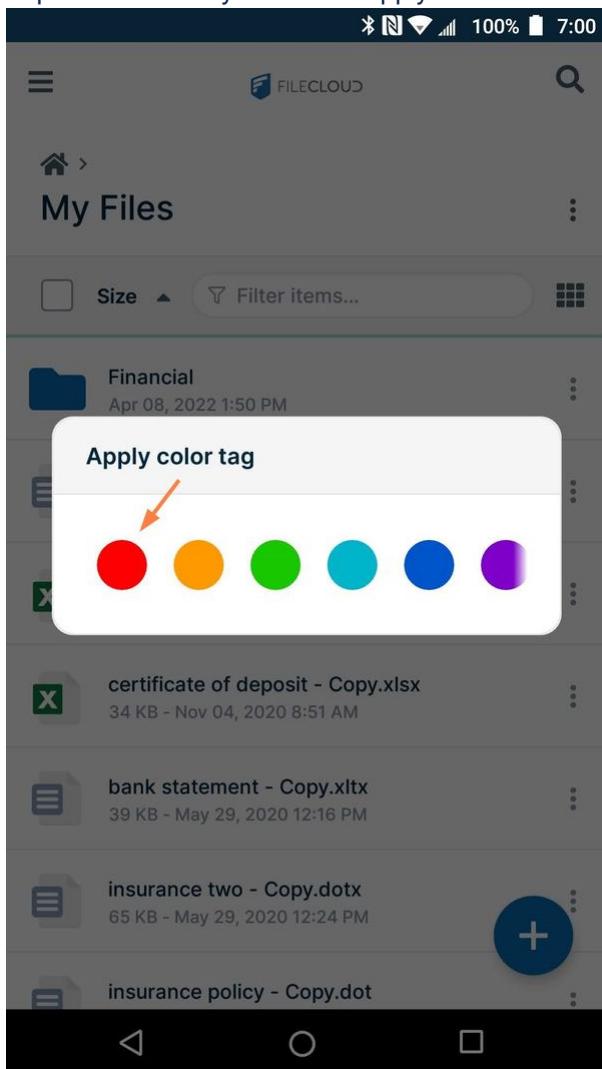

4. Tap **Apply color tag**.

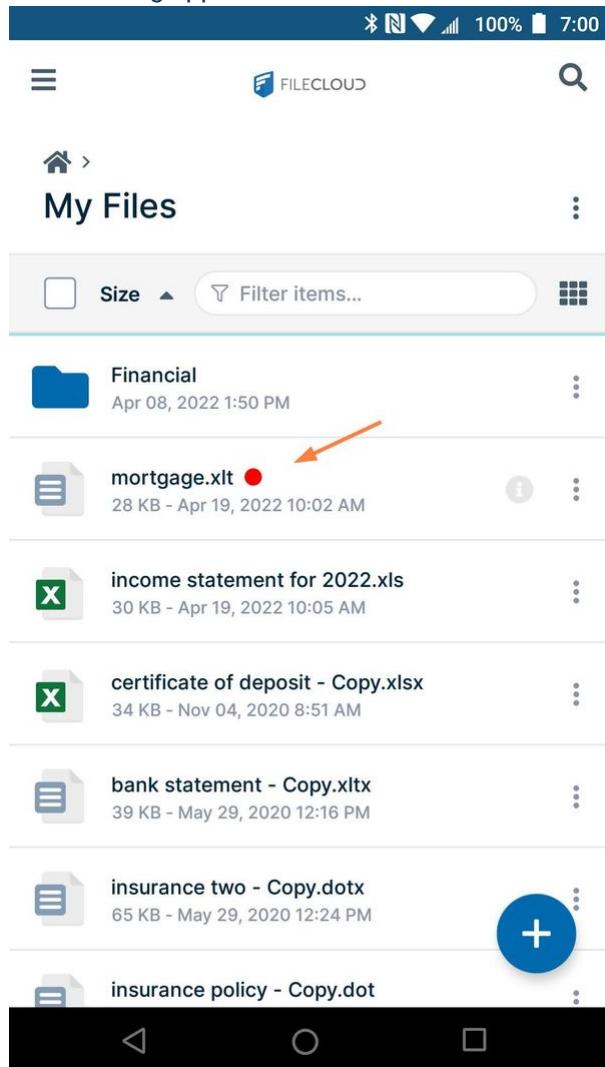

A pop-up displays colors.

5. Tap the color that you want to apply.

The color tag appears next to the file or folder.

File Locking in Android

File and folder locking is available beginning in version 23.232 of Android.

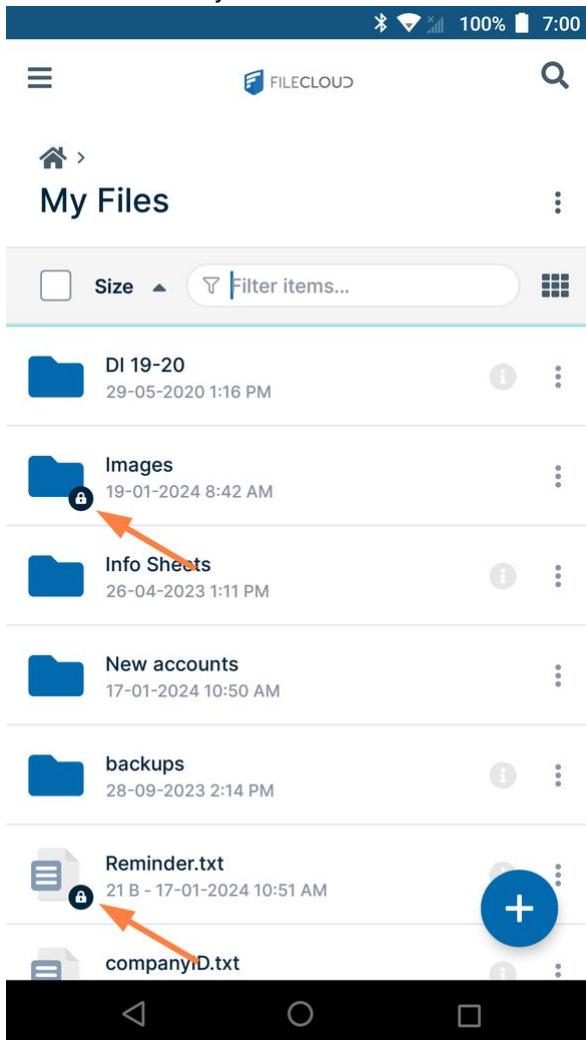

Locking is available for both files and folders. It indicates that you are actively editing that file or folder and don't want others to edit it as well.

Locking must be enabled by your administrator in FileCloud to enable you to lock a file or folder.

When a file or folder is locked in Android:

- A lock icon overlays the file or folder:

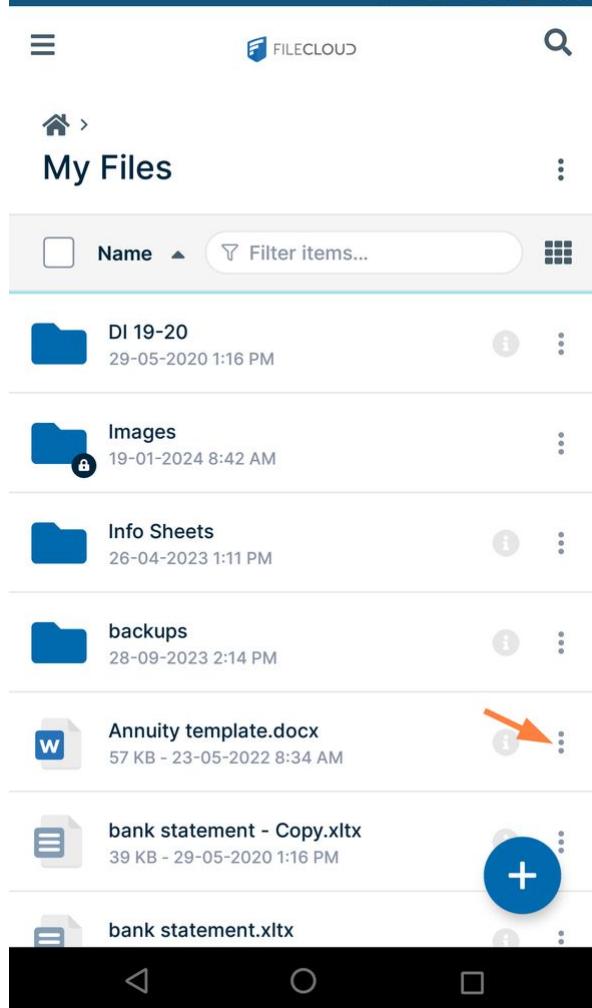

- The owner of the lock has full access to that file or folder and can modify it.
- Admins can always override a lock using the admin panel.
- A lock can be set up to prevent the locked file from being read. In that case other users cannot download or view the locked file or folder.
- The following table shows the behavior depending on the type of lock.

Lock type	Access by lock owner	Access by others
Read permitted	Full access to the file is available. Share/Sync/Edit/Delete allowed.	Only read is allowed. No modification is allowed.
Read not permitted	Full access to the file is available. Share/Sync/Edit/Delete allowed.	No access is provided. All access using all clients is blocked.

Locking a File or Folder in Android

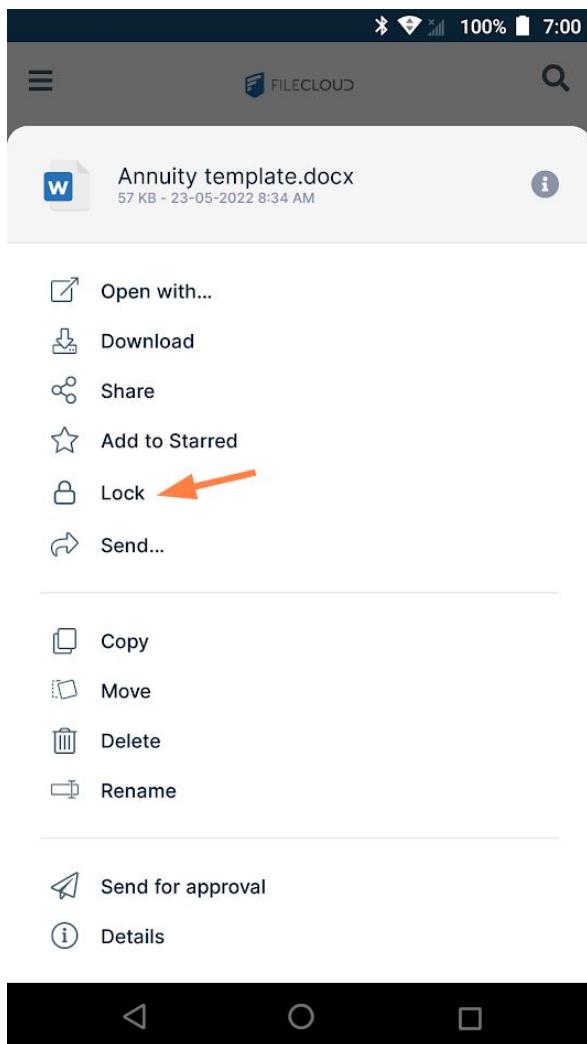

To lock a file or folder:

1. Tap the More icon to the right of the file or folder.

A list of actions for the file opens.

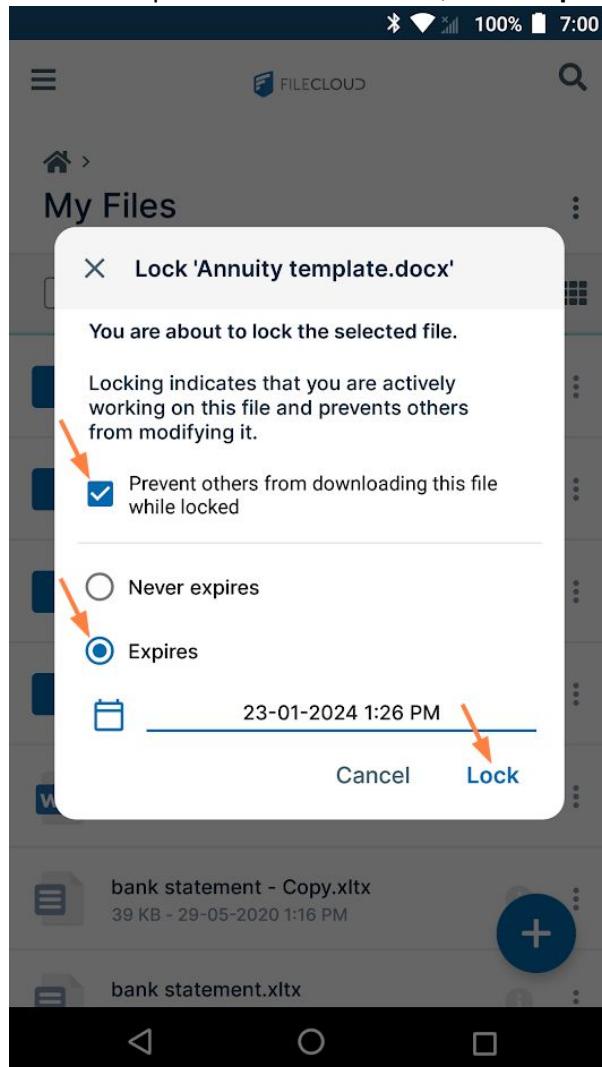

2. Tap **Lock**.

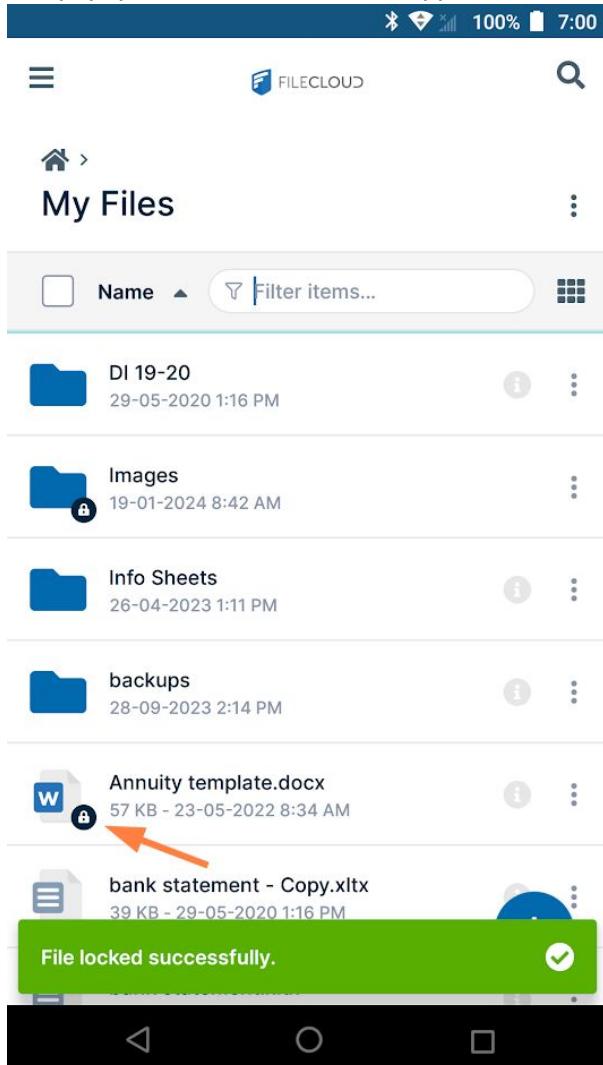

A popup with lock options opens.

3. To prevent the item from being modified by other users, but to allow them to continue to download and read it, just tap **Lock**.
To prevent others from modifying, downloading and reading the item check **Prevent others from downloading this file while locked** before tapping **Lock**.

To set an expiration date for the lock, select **Expires** and choose an expiration date.

4. The popup closes and a lock icon appears on the item.

To view information about a lock

You can see who locked a file and if other users are not permitted to read it by [accessing the Details tab](#) (see page 184) (tap the More icon at the end of the file's row and choose More Info, or, if there is an

info icon for the file, tap the Info icon).

Retention

No effective retention policy

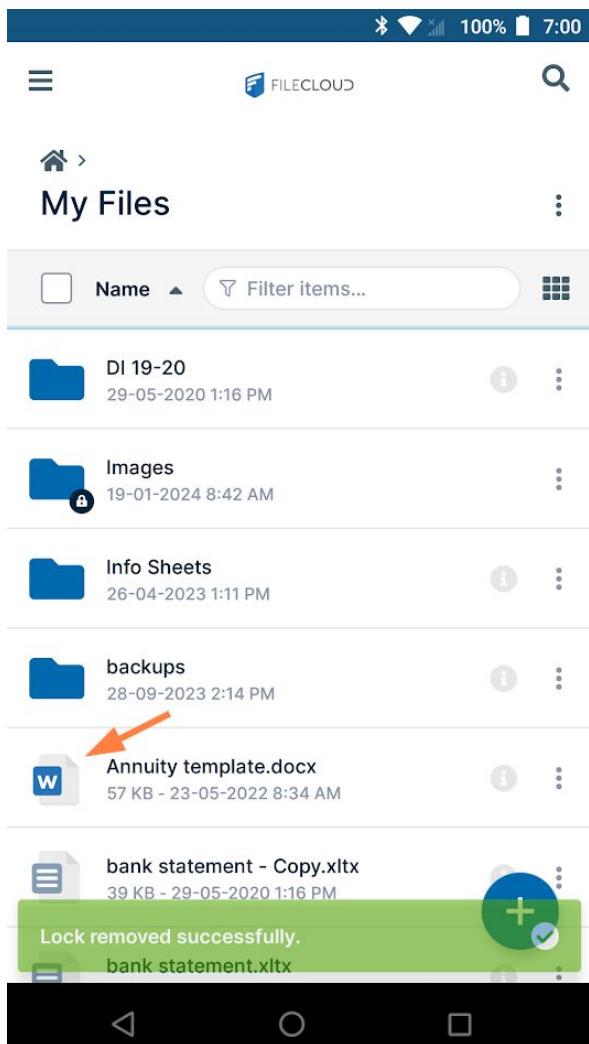

To unlock a file or folder

1. Tap the More icon to the right of the file or folder.
The list of actions for the file or folder opens, but shows **Unlock** instead of **Lock**.
2. Click **Unlock**.

The item is unlocked and no longer appears with a lock icon.

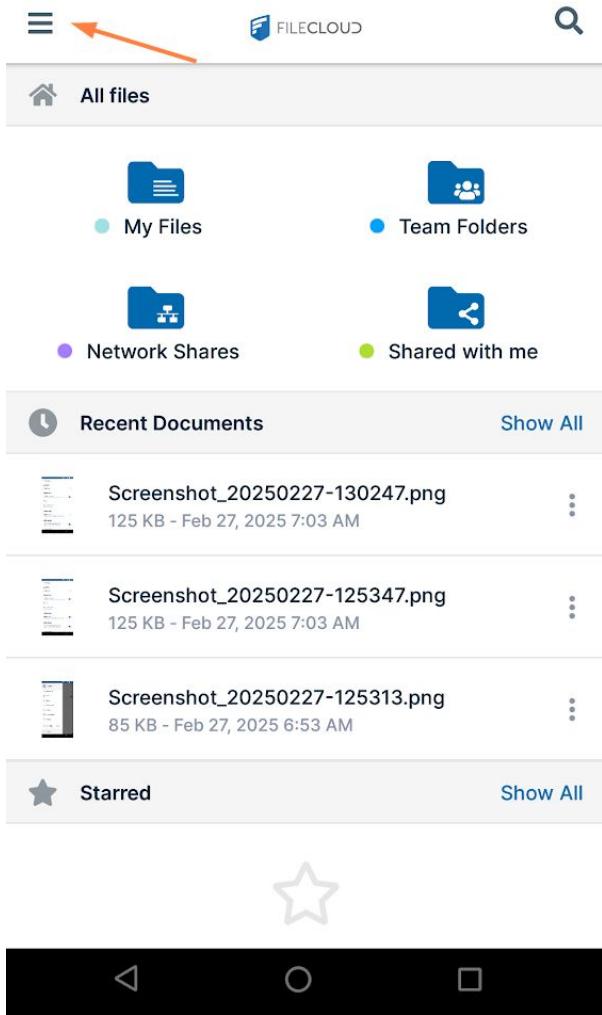

View File Operations in Android

You can view media sync operations in the **File Operations** window.

If the media sync is still being performed, the window shows you its progress. When the operation completes, the window displays a finished message with a green check icon if it completed successfully or a red x icon if it finished with errors. You can see log records of the completed operation by clicking the arrow next to it.

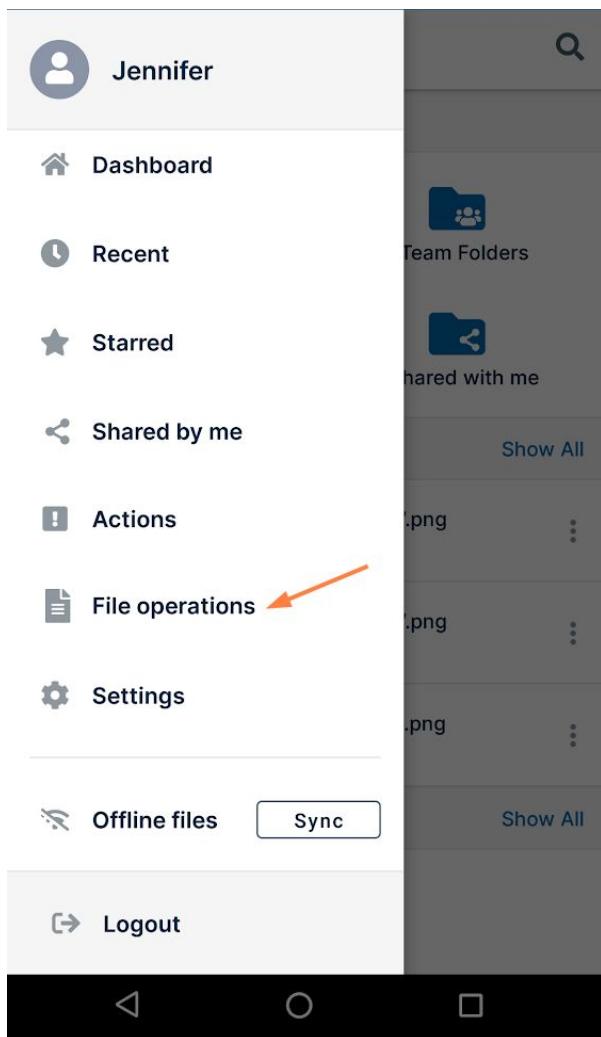

To open the File Operations window:

1. Tap the menu icon in the upper-left of the screen.

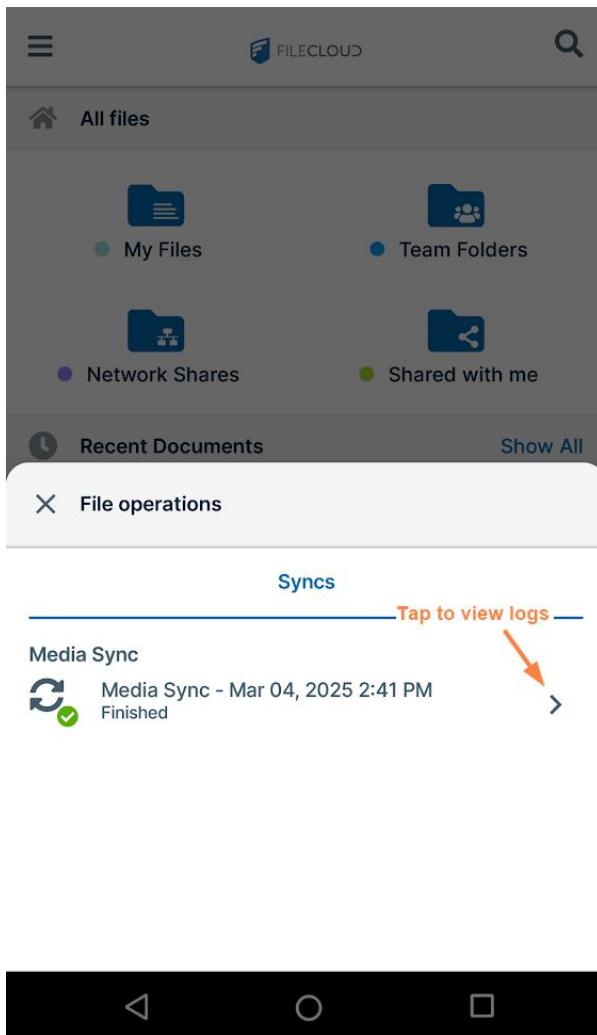

The navigation pane opens.

2. Tap **File Operations**.

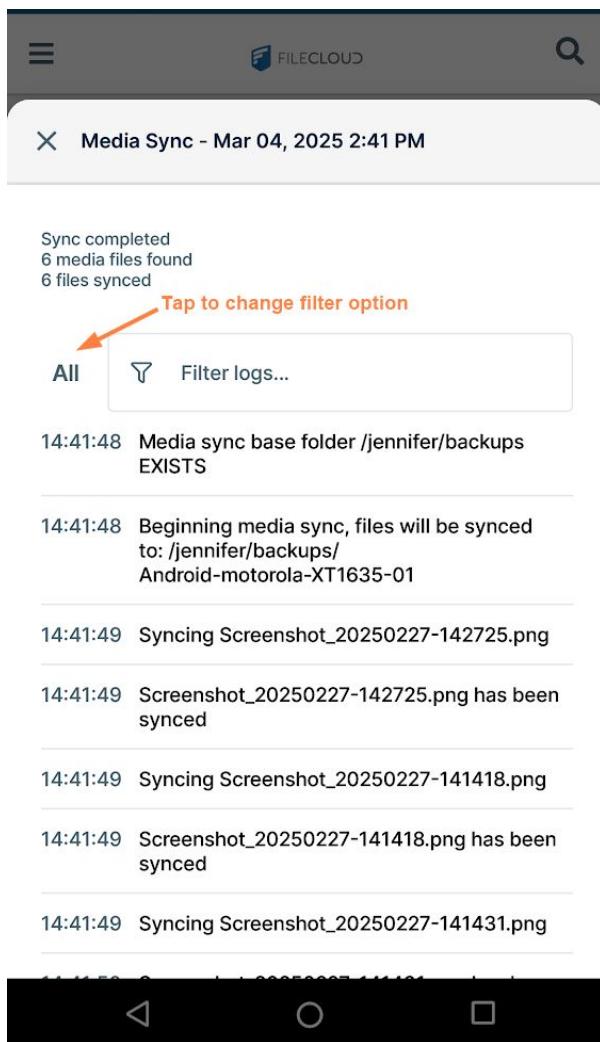

The File Operations window opens and displays the most recent media sync.

3. Tap the arrow next to the media sync action to see the log files associated with it.

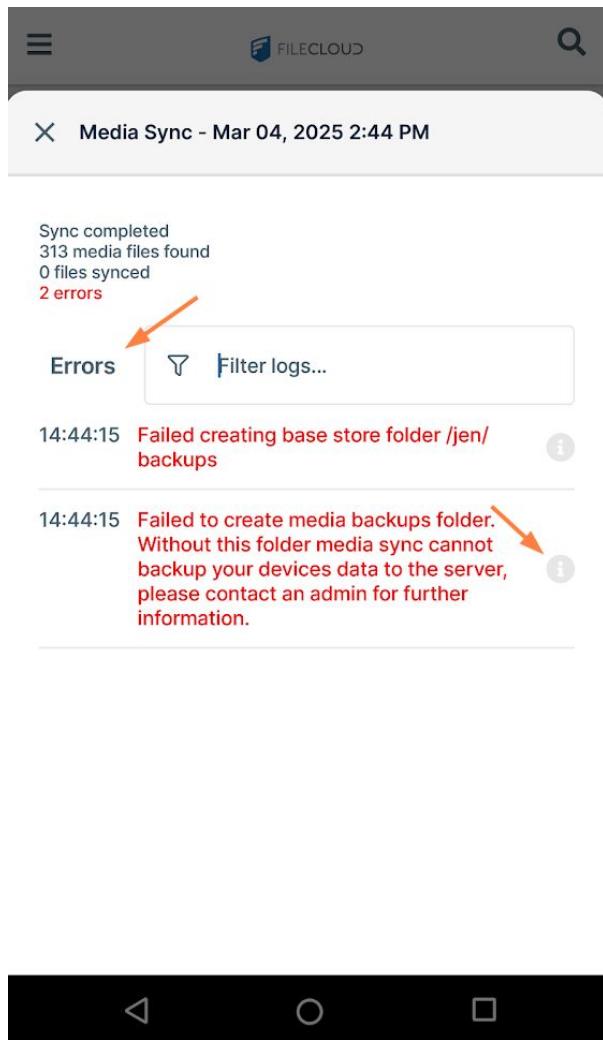

4. You can filter sync logs by entering a text string in the **Filter logs** box or, to view log files by status, by tapping the label next to the **Filter logs** box and choosing **All**, **Info**, or **Errors**.

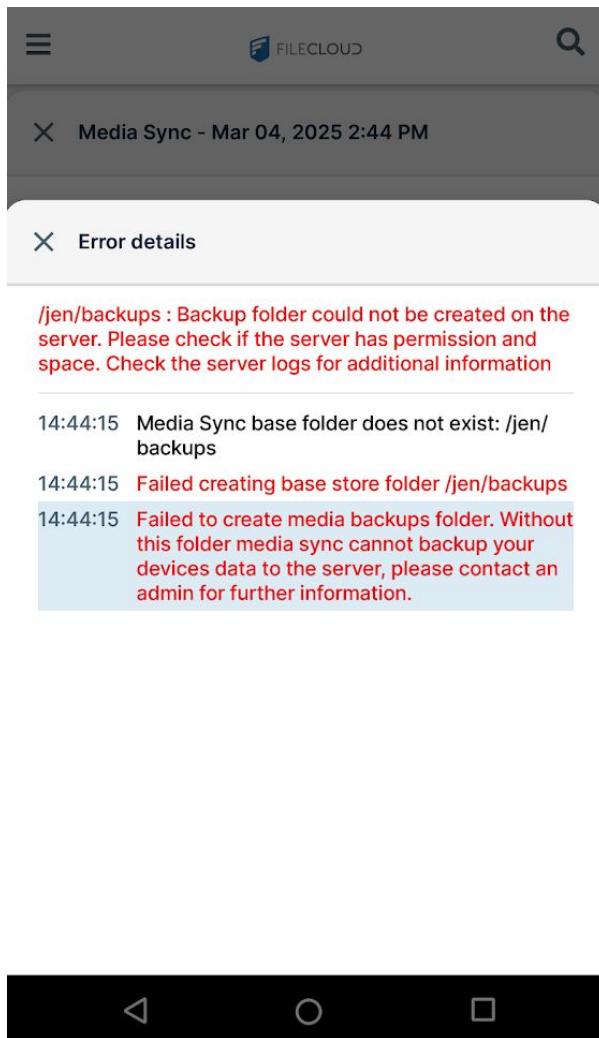

Viewing errors

If you want to see a list of sync errors, tap the label of the **Filter logs** box until it says **Errors**, as in the following screenshot.

When you filter by errors, each error log entry has an info icon next to it that you can tap to view error details.

The details for the second log entry in the image above appear as follows:

Syncing FileCloud on Android

- [Enabling Offline Sync on Android \(see page 507\)](#)
- [Starting an Offline Sync on Android \(see page 510\)](#)
- [Checking Sync Status on Android \(see page 514\)](#)
- [Disabling Offline Sync on Android \(see page 516\)](#)

Enabling Offline Sync on Android

FileCloud supports offline sync.

With this feature you are able to :

- Download files to access them while offline

- Update your local version of a file when the remote version has changed
- Add new local files that will be uploaded when connectivity is available

Note: Only folders can be synchronized.

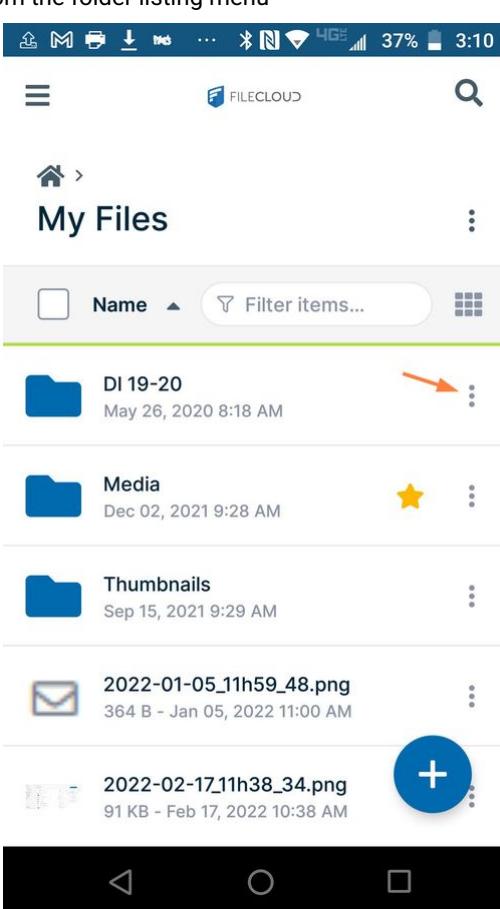

To have a folder's content available when you are offline, you must:

1. Enable the feature.
2. Start an offline sync. (see page 510)

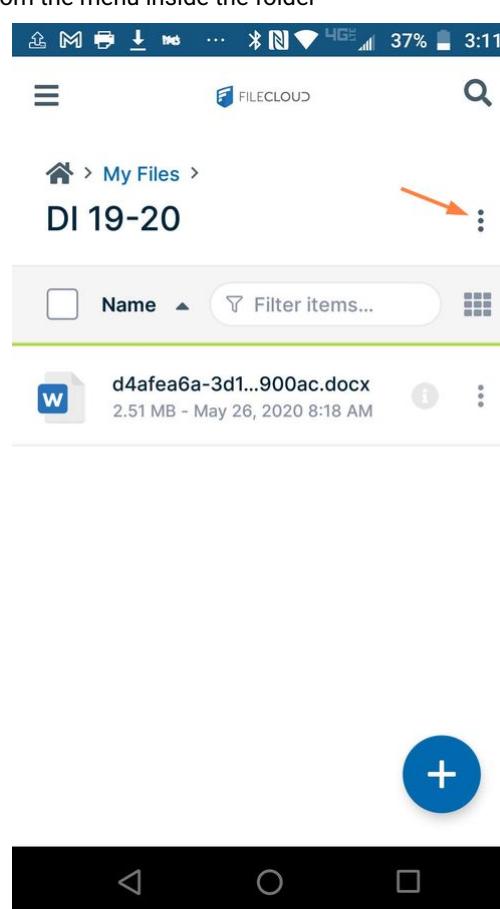

To enable offline availability:

1. Open the FileCloud app.
2. Navigate to the folder you want available when you are offline.
3. Open the folder options from the folder listing or from inside the folder:

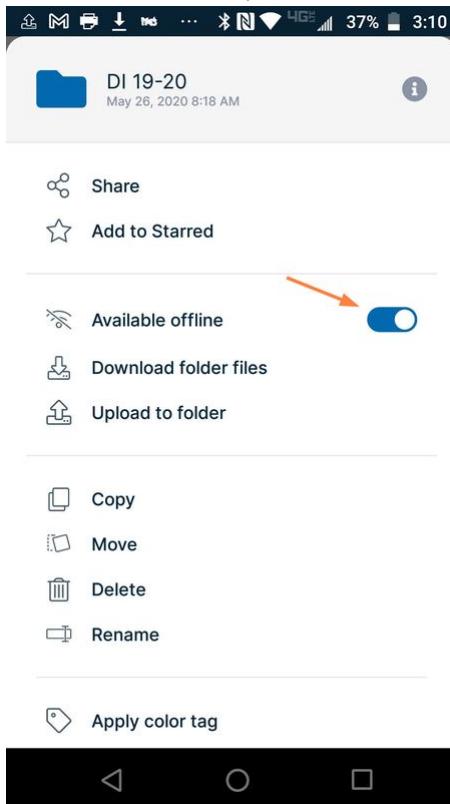

From the folder listing menu

From the menu inside the folder

4. For **Available offline**, slide the switch to the right so that it is on.

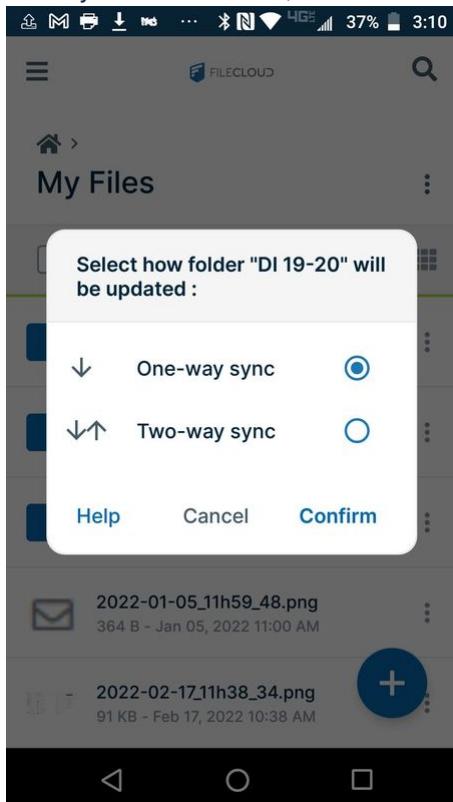

5. Choose a Sync direction.

One-way sync: Any changes made to your local files will be ignored. When syncing, your local files will be overwritten with updated files from the server.

Two-way sync: Changes made to your local files will be uploaded to the server when syncing. Any files on the server that have updated since the last sync will replace your local files.

When you click **Confirm**, the folder is synced.

To have a folder's most recent content available, sync before you go offline.
[Starting an Offline Sync \(see page 510\)](#)

Starting an Offline Sync on Android

After you enable Offline Availability for a folder, you must sync the contents before you go offline.

- Only folders can be synchronized
- Files will be uploaded or replaced depending on whether you chose One-Way or Two-Way Synchronization
- **One-way sync:** Any changes made to your local files will be ignored. When syncing, your local files will be overwritten with updated files from the server.
- **Two-way sync:** Changes made to your local files will be uploaded to the server when syncing. Any files on the server that have updated since the last sync will replace your local files.

To have a folder's content available when you are offline, you must:

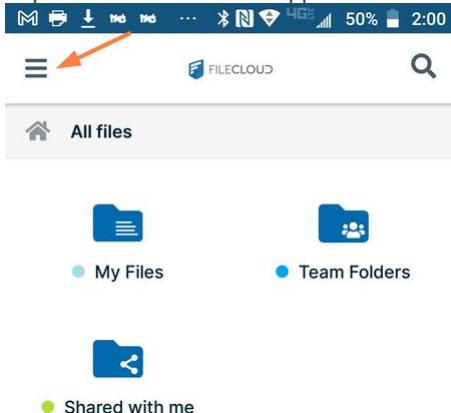

1. [Enable the feature. \(see page 507\)](#)
2. Start an offline sync.

Starting an offline sync.

To perform the actual sync, you have two options:

For a one-time sync:

1. Tap the menu icon at the upper-left of the screen.

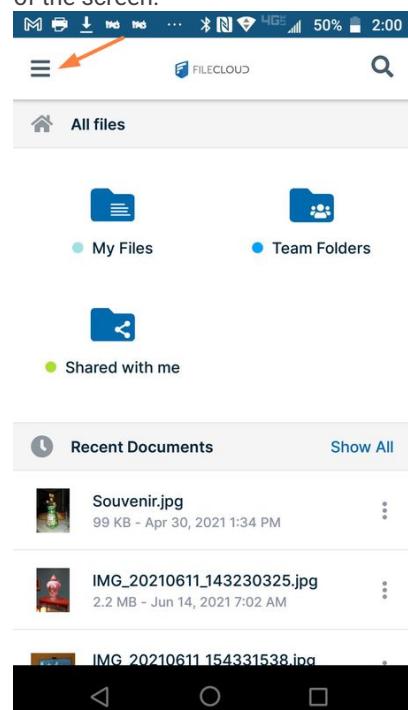

2. Next to **Offline files**, tap **Sync**.

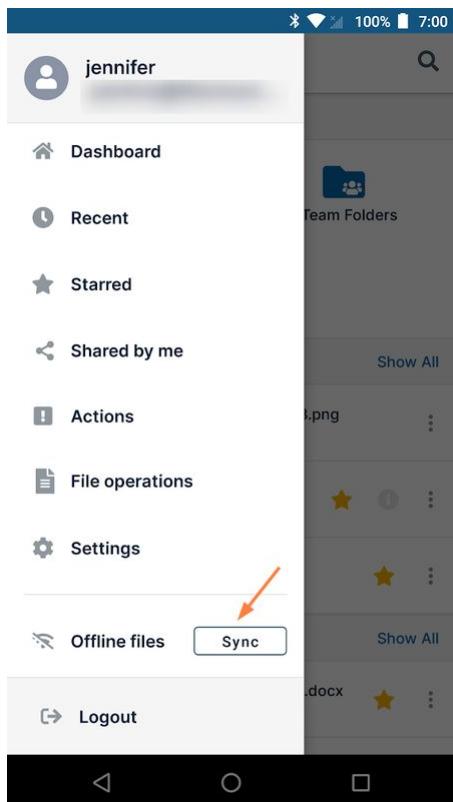

To automatically start an offline sync when:

- you open the app
- you open the accounts screen

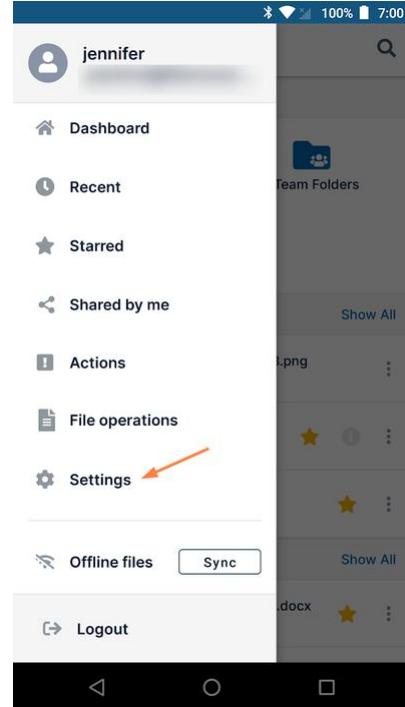

1. Click the menu icon at the upper-left of the screen.

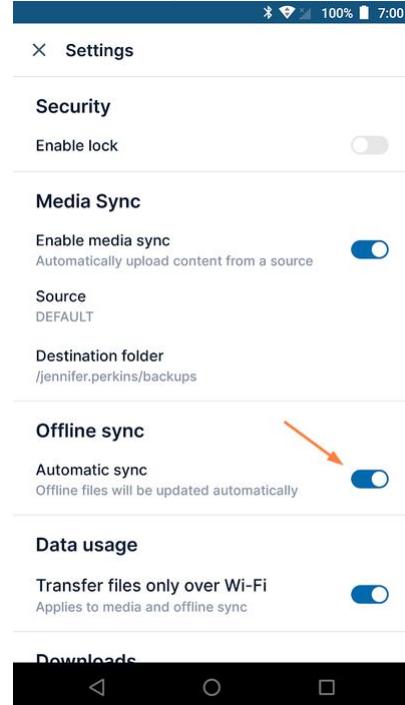

To perform the actual sync, you have two options:

2. In the screen that opens, click **Settings**.

3. In the **Settings** screen, scroll down to **Offline sync** and click the slider next to **Automatic sync** to enable it.

Browsing your offline files

To browse your offline files:

1. Before you log in, if there are offline files synced, an **Offline files** button appears.

Welcome

Please enter your server address :

A text input field with a placeholder "https://...".

Next

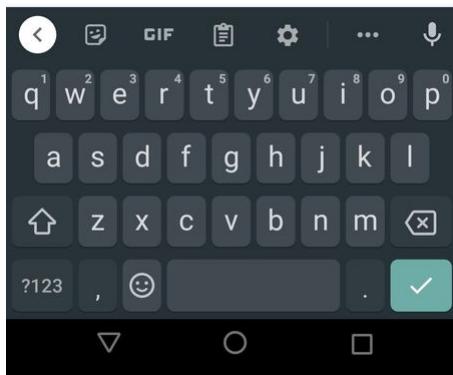

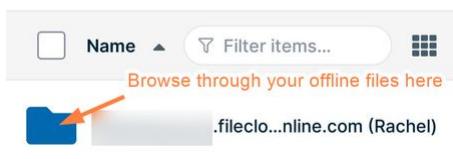

2. Click the **Offline files** button.

3. Your offline files storage opens, and you can browse through the folders to access your files.

Files

Checking Sync Status on Android

While offline sync is performing in the background, you can monitor its progress and check for issues.

An online sync includes:

- Downloading files to access them while offline
- Updating your local version of a file when the remote version has changed
- Adding new local files that will be uploaded when connectivity is available

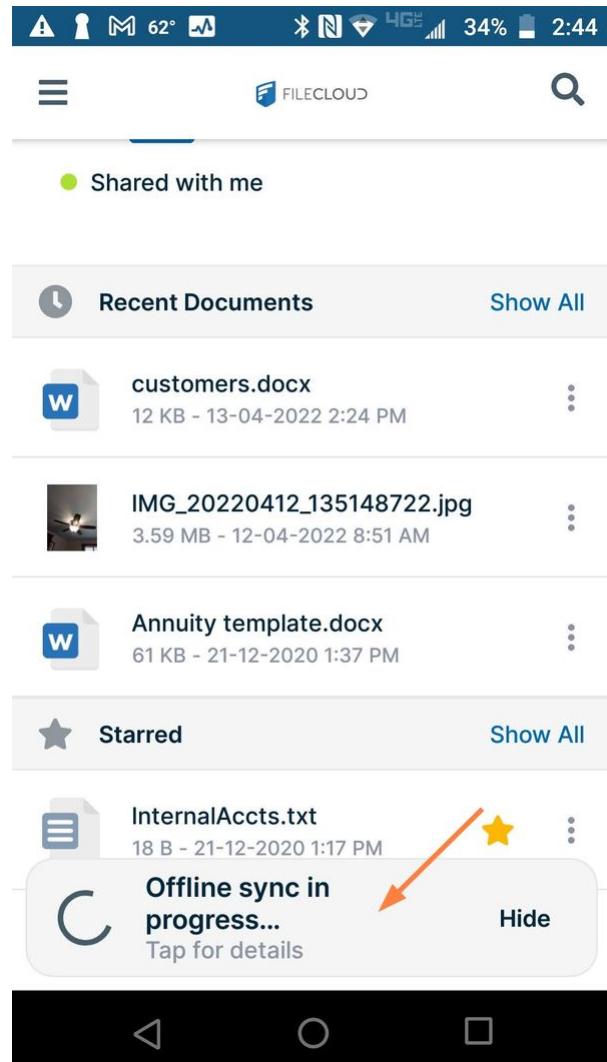

Only folders can be synchronized.

Files will be uploaded or replaced depending on whether you chose One-Way or Two-Way Synchronization.

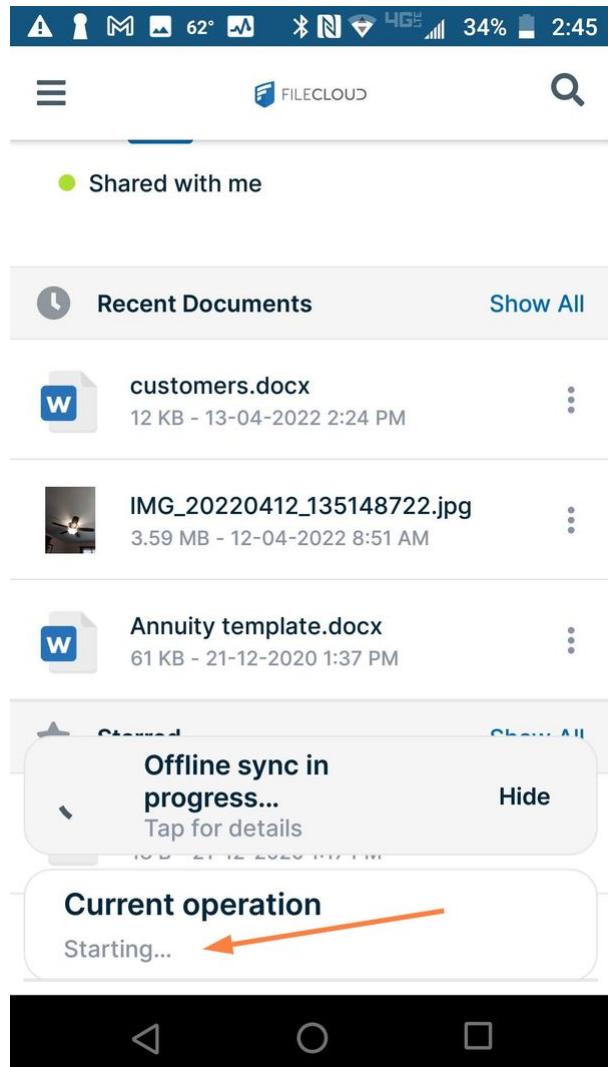

- **One-way sync:** Any changes made to your local files will be ignored. When syncing, your local files will be overwritten with updated files from the server.
- **Two-way sync:** Changes made to your local files will be uploaded to the server when syncing. Any files on the server that have updated since the last sync will replace your local files.

To check the status of an offline sync:

During a sync, a pop-up notification remains at the bottom of your screen in the FileCloud app with the message **Offline sync in progress**:

Click **Tap for details** to see the app's current action in the sync process:

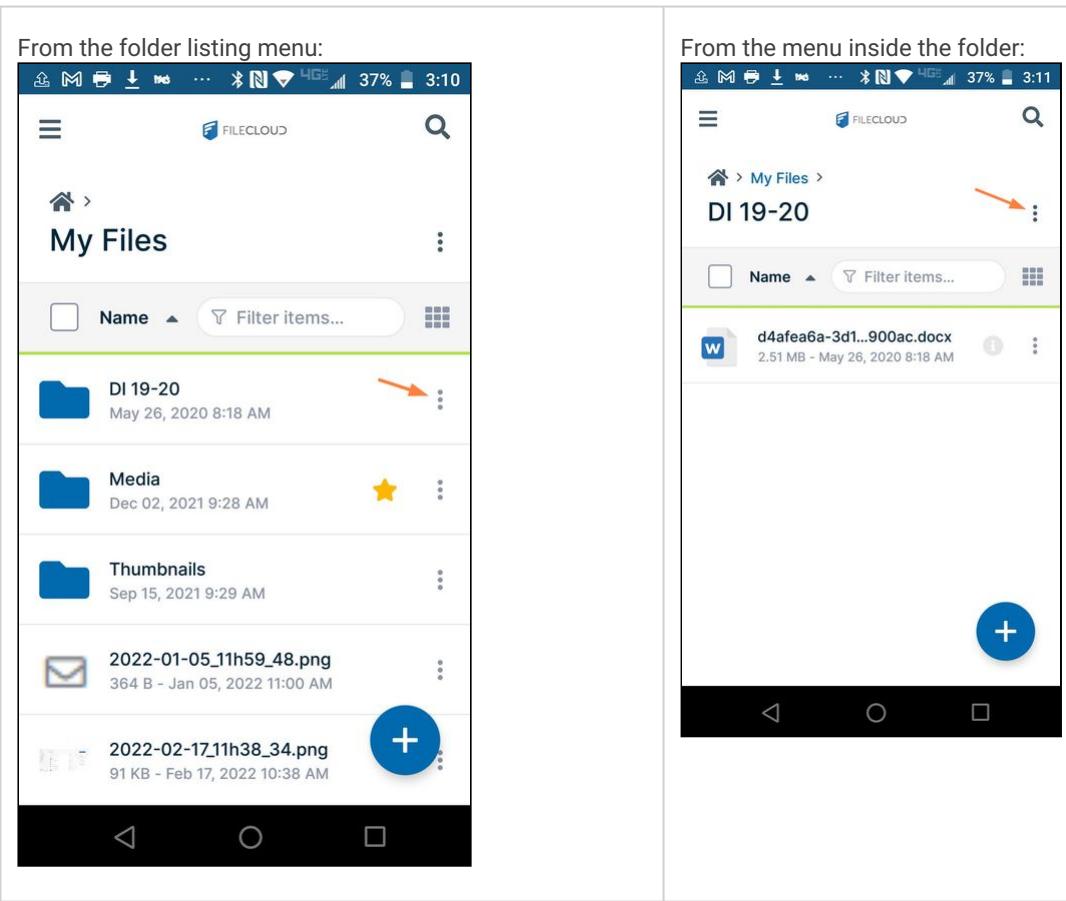

Disabling Offline Sync on Android

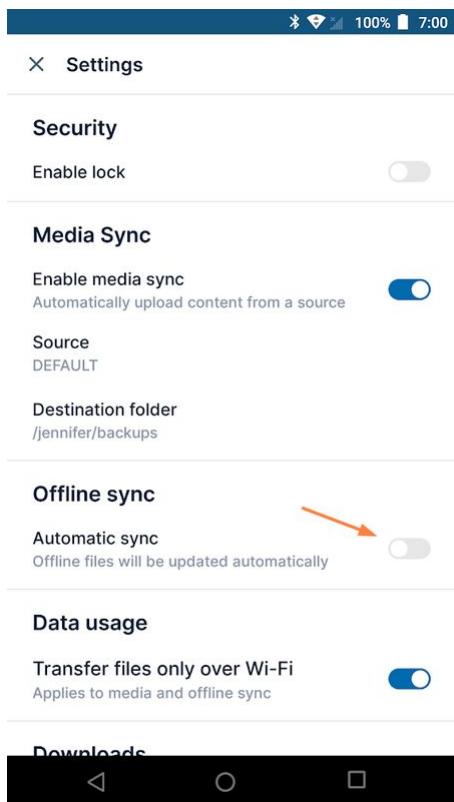

If you no longer want to download files to access them while offline or update your local version of files, you can disable offline availability.

To disable offline availability:

1. Open the FileCloud app.
2. Navigate to the folder that was available offline.
3. Open the options menu from:
 - the folder listing
 - inside the folder

4. Disable offline availability.
Slide the **Available offline**, switch to the left so that it is off.

Using FileCloud with Other Android Apps

- [Access FileCloud Server Files from Other Apps \(see page 518\)](#)
- [Saving Files from Other Apps to FileCloud \(see page 524\)](#)
- [Sending FileCloud Files Using Other Android Apps \(see page 536\)](#)

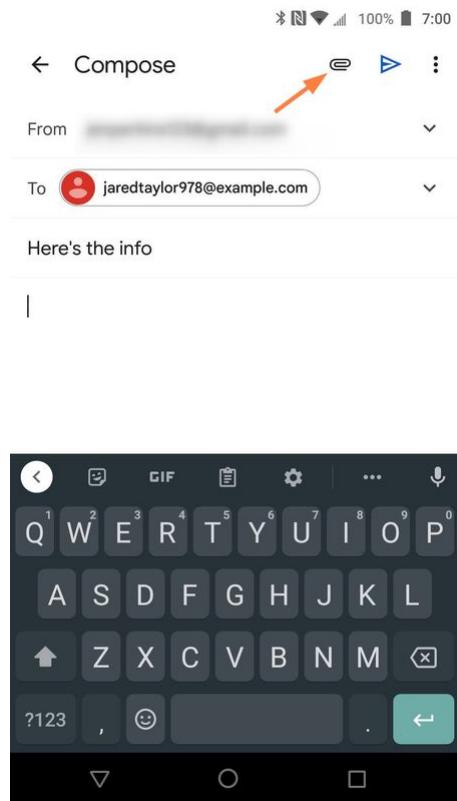

Access FileCloud Server Files from Other Apps

On Android, when you are working in another app, you can remain in that app to upload or attach a file stored in FileCloud.

The following example uses Gmail to demonstrate how to access FileCloud files from another app, however, you could use the same process in any app that allows you to upload or browse files external to it.

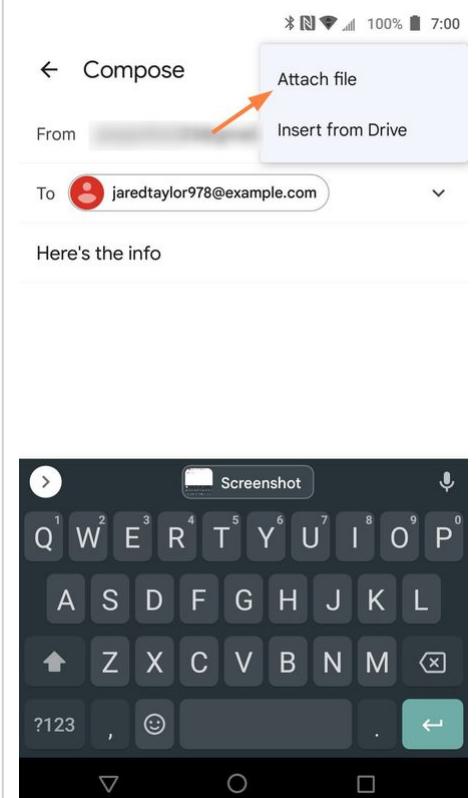

Attach a file to an email using Android's Gmail app

1. On your Android device, open Gmail.
2. Tap **Compose**.
3. To attach a file, tap on the paperclip.

Attach a file to an email using Android's Gmail app

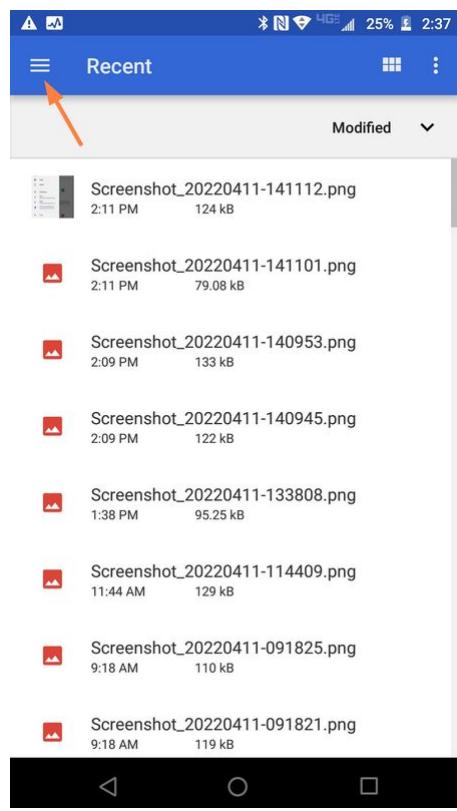

4. Tap **Attach file**.

The screenshot shows the Gmail app's compose screen. At the top, there's a floating action menu with two options: 'Attach file' and 'Insert from Drive'. An orange arrow points to the 'Attach file' option. Below the menu, the 'Compose' screen is visible, showing the 'From' field, the 'To' field with an email address, and a text area containing the text 'Here's the info'. At the bottom of the screen, a portion of the Android keyboard is visible.

Attach a file to an email using Android's Gmail app

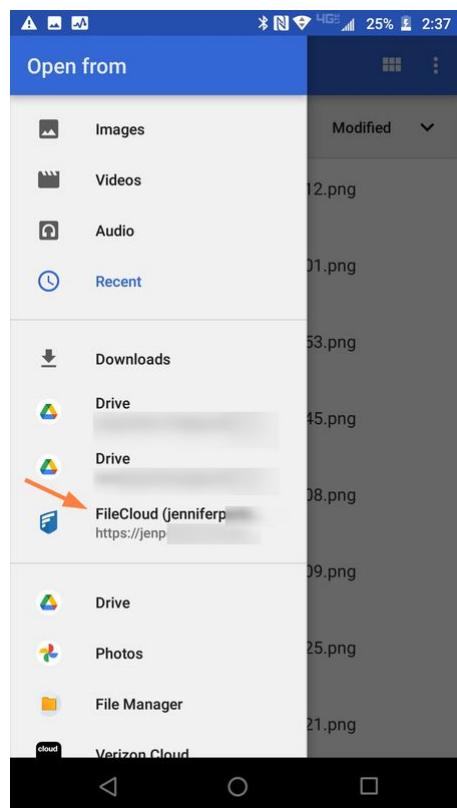

Initially, Android may open the last location accessed. If it does, tap the menu icon in the upper-left corner.

Attach a file to an email using Android's Gmail app

You should see a panel similar to the one shown here.

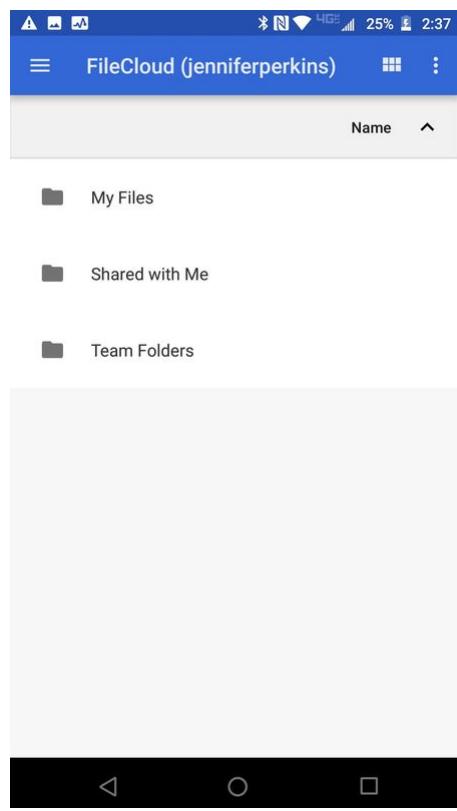

5. Tap **FileCloud**.

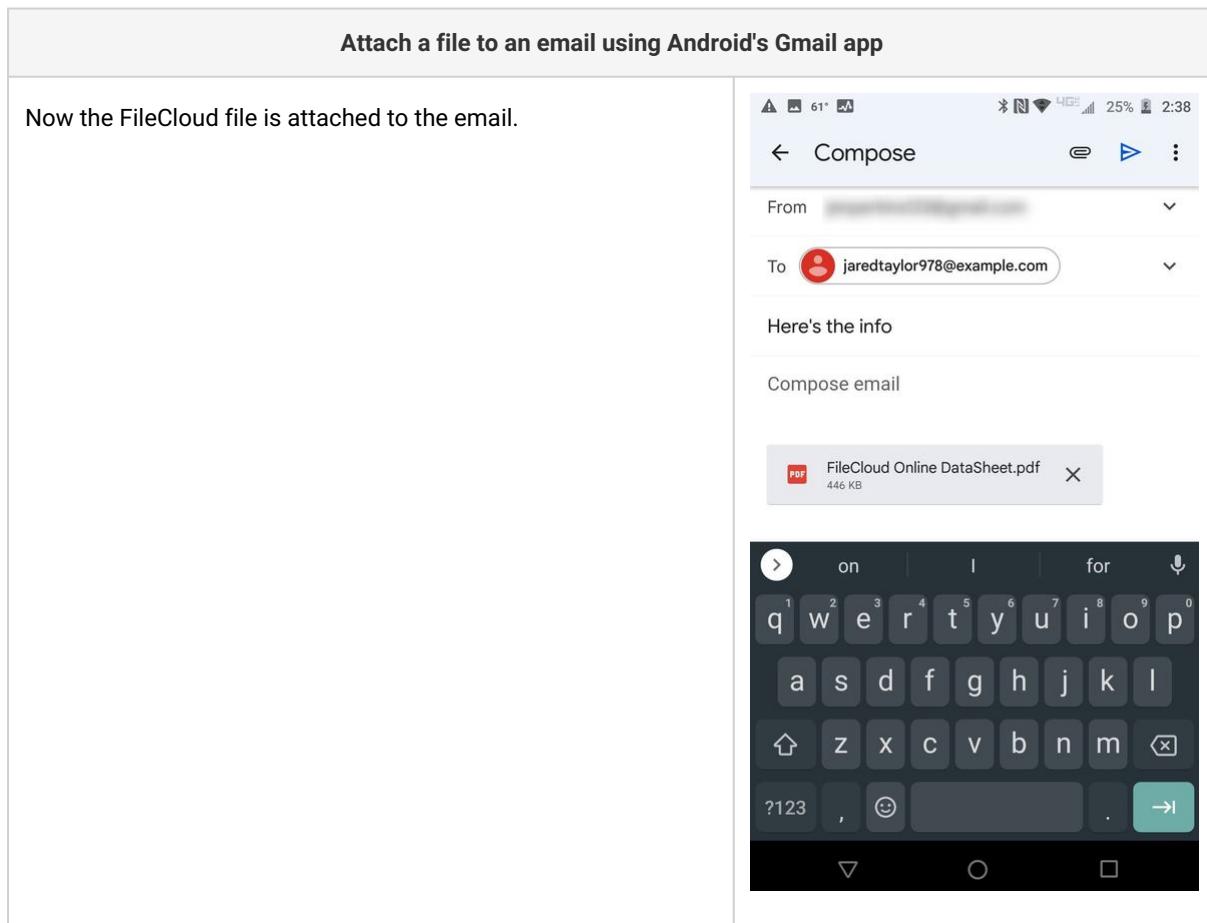

Attach a file to an email using Android's Gmail app

Your FileCloud folders appear.

6. Navigate to the folder containing the file, and select the file to attach to the email.

Saving Files from Other Apps to FileCloud

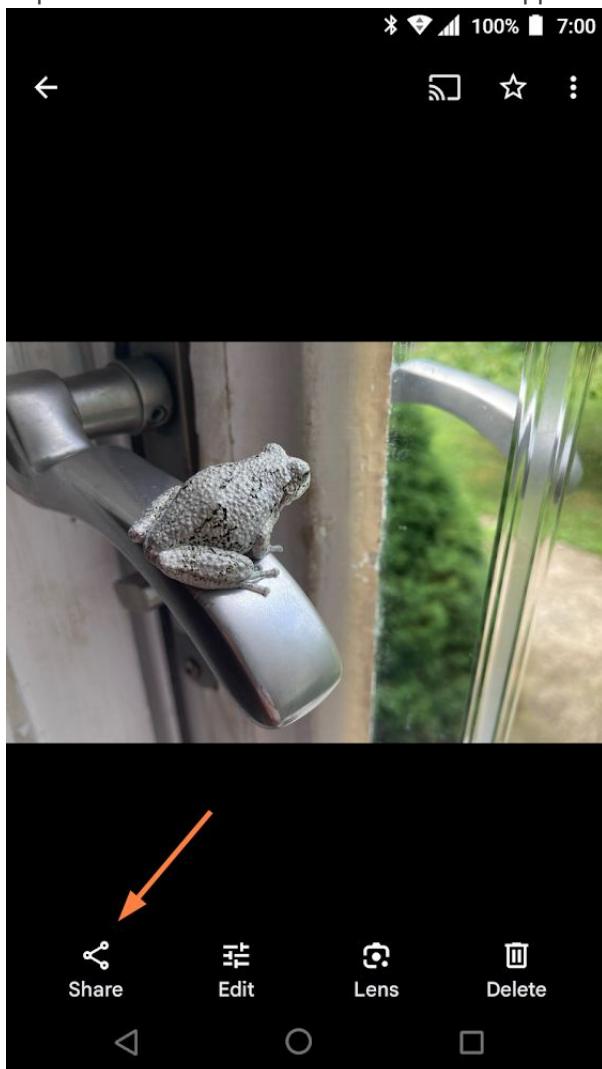

On Android, when you are working in another app, you can remain in that app and save a file to FileCloud.

The following example uses Google Photos to demonstrate how to save files to FileCloud from another app, however, you could use the same process in any app that allows you to save to other apps.

To save files from other apps to FileCloud:

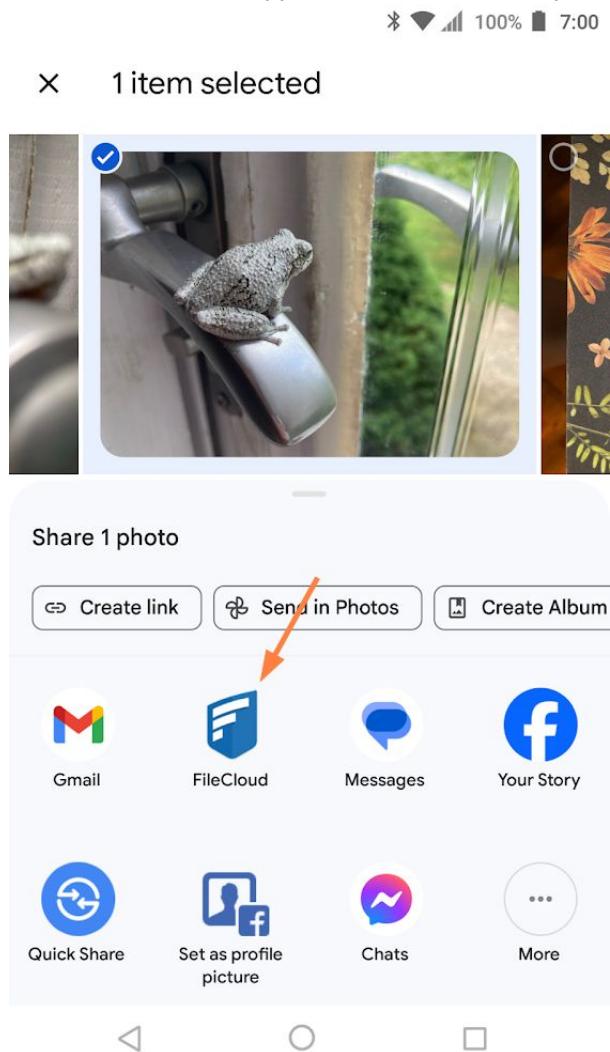

1. Open the other app on your Android device.
2. Access the file(s) to upload.

3. Tap the the icon to **Share** or **Save** to in the app.

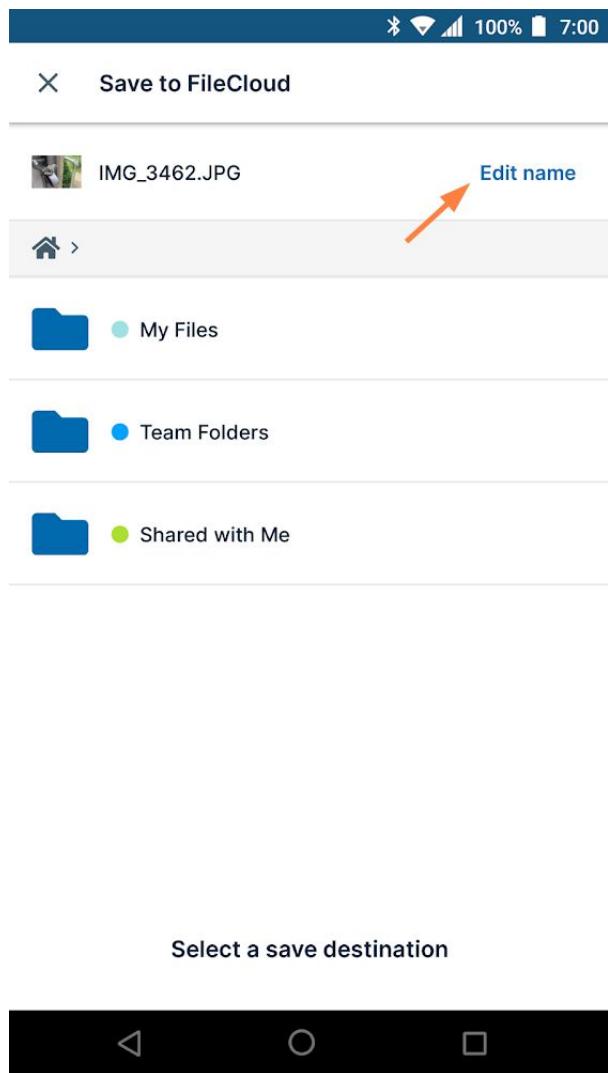

In Google Photos, the option is **Share**.

4. Select the FileCloud app icon from the list of options.

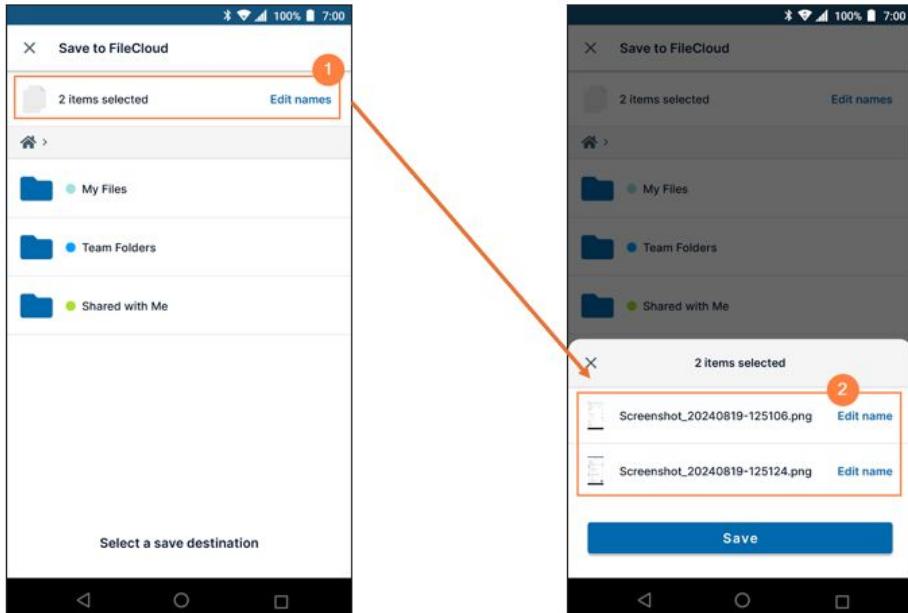

The **Save to FileCloud** screen opens. (If your FileCloud login credentials are not saved in Android, you are prompted to log in to FileCloud first).

You are given the option of editing the filename before you save it to FileCloud.

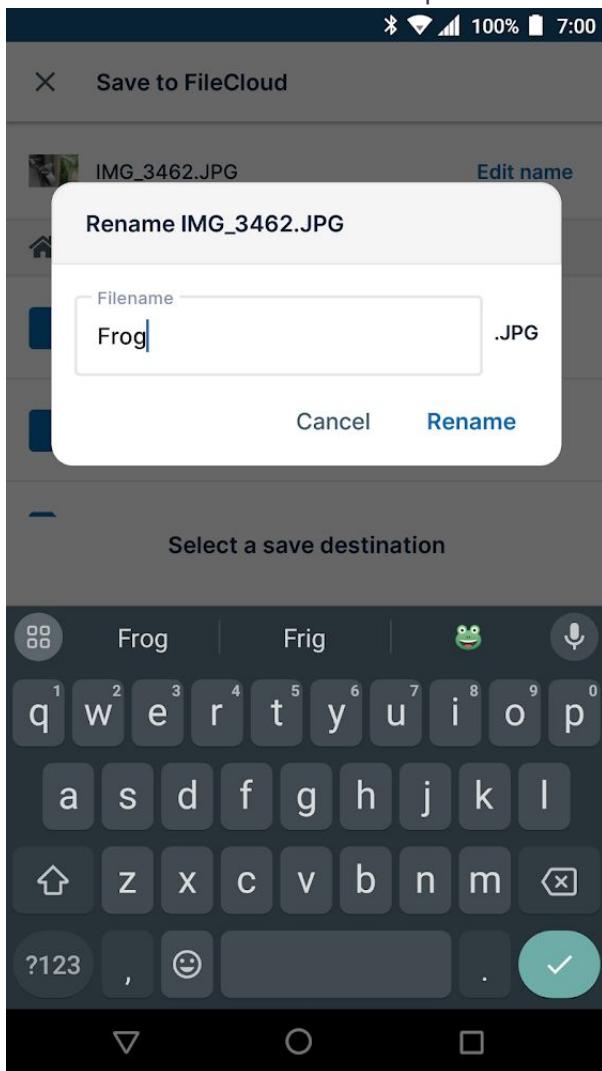

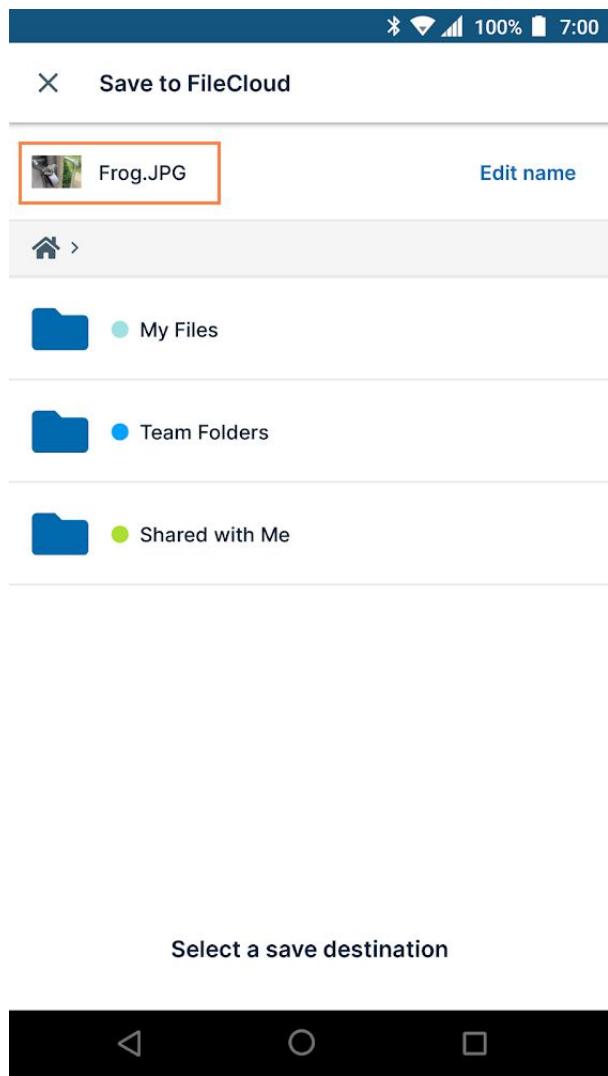

If you choose multiple files, first you see an option to edit all files selected, and after you click **Edit Name**, the **Edit Name** option for each file appears.

5. Enter a new name for the file and tap **Rename**.

The file is renamed.

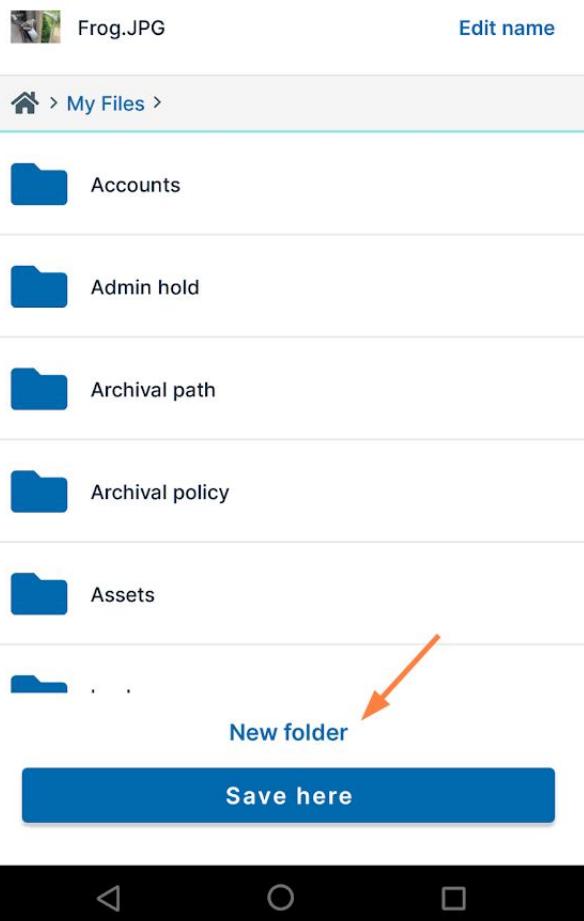

6. Navigate to the FileCloud folder where you want to save the file(s).

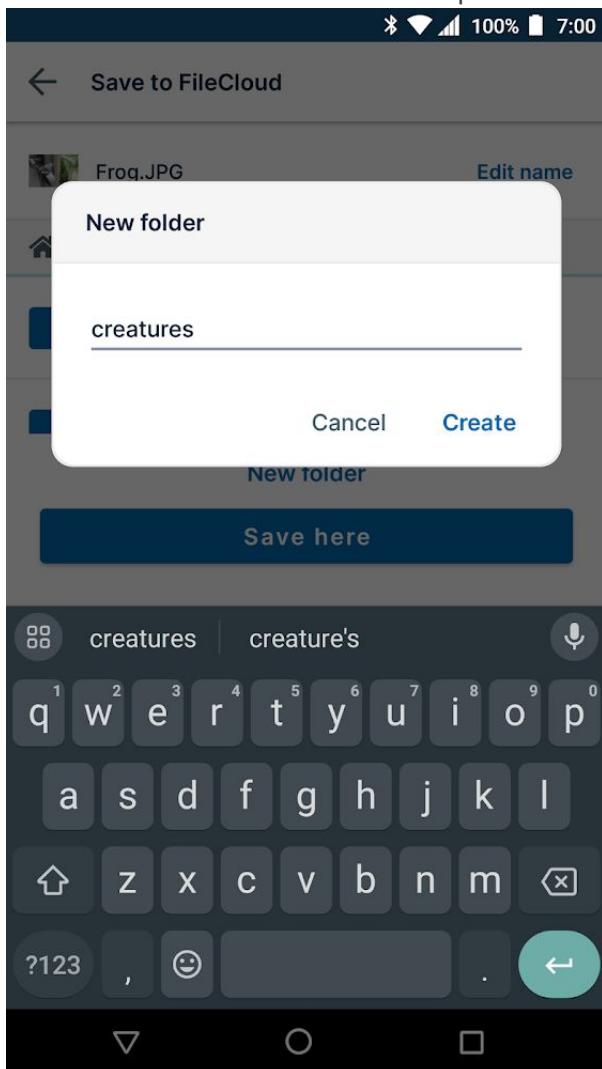

7. To create a new sub-folder for storing the file(s), tap **New Folder**.

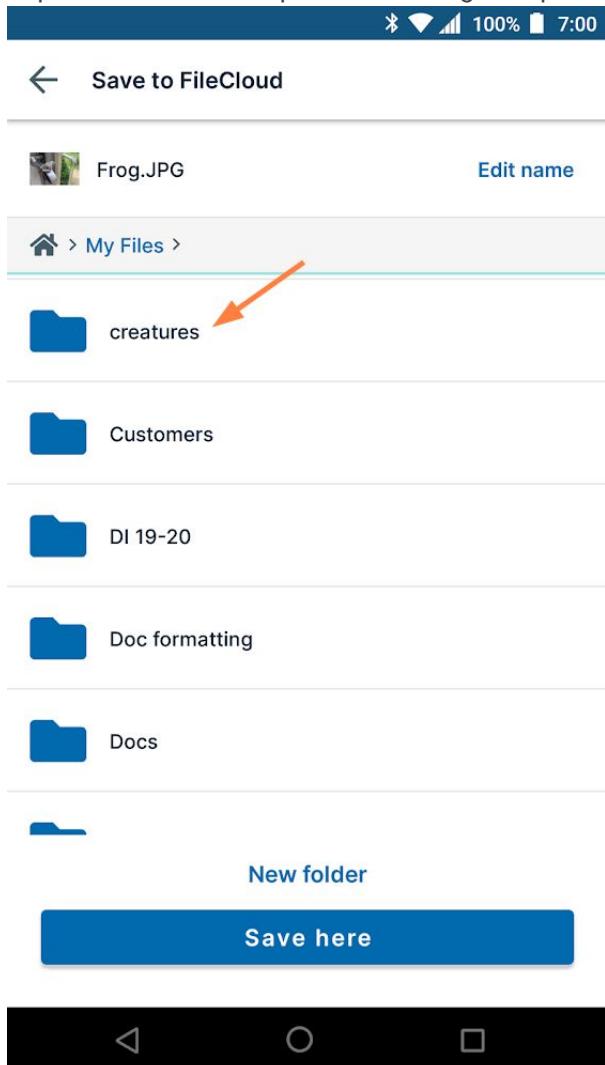

← Save to FileCloud

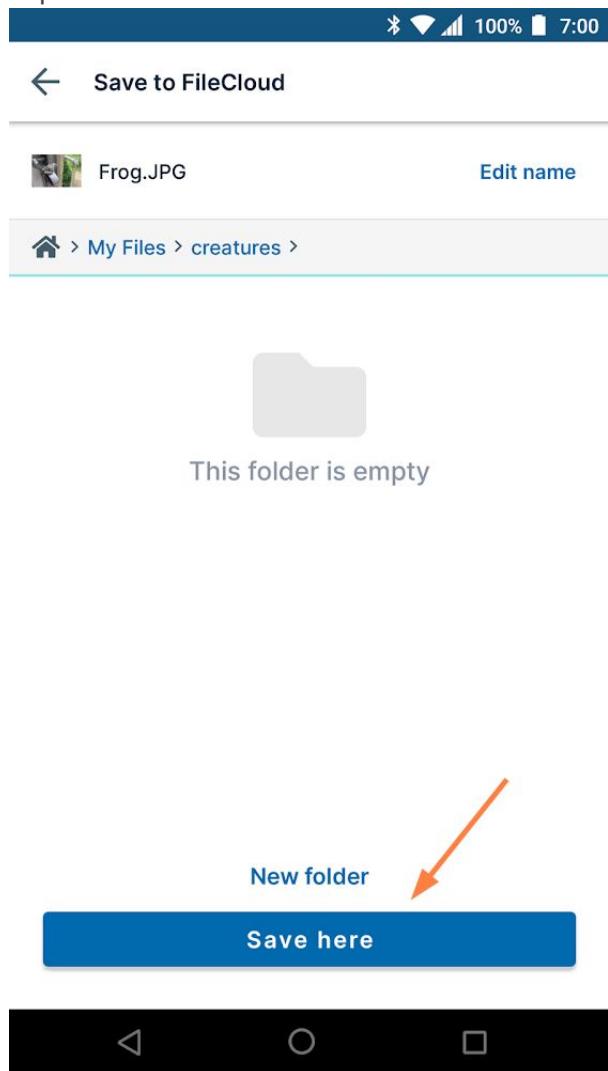

8. Enter a name for the new folder and tap **Create**.

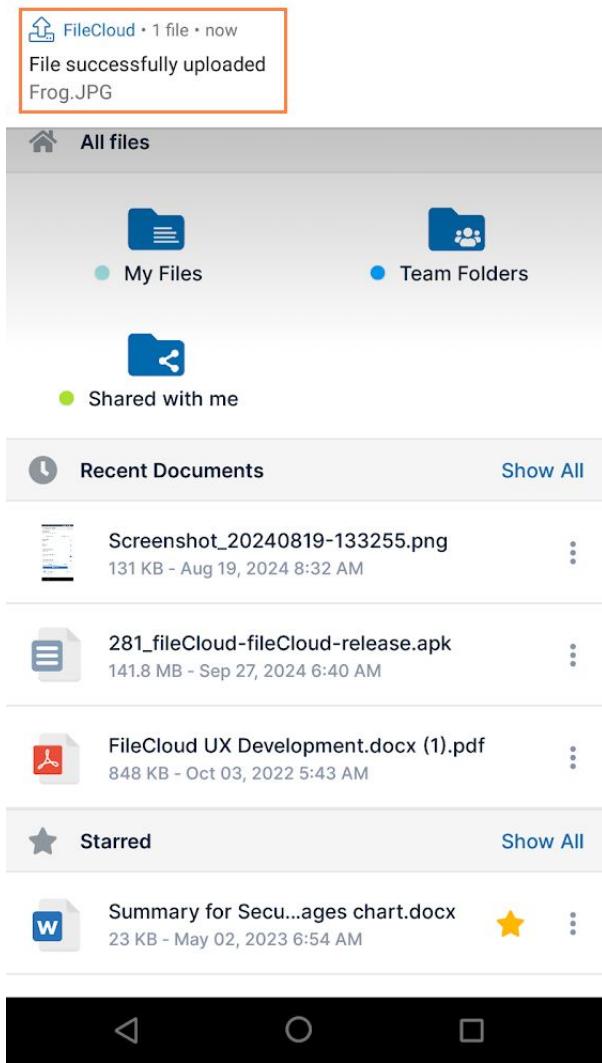

9. Tap the new folder to open it for storing the uploaded file(s).

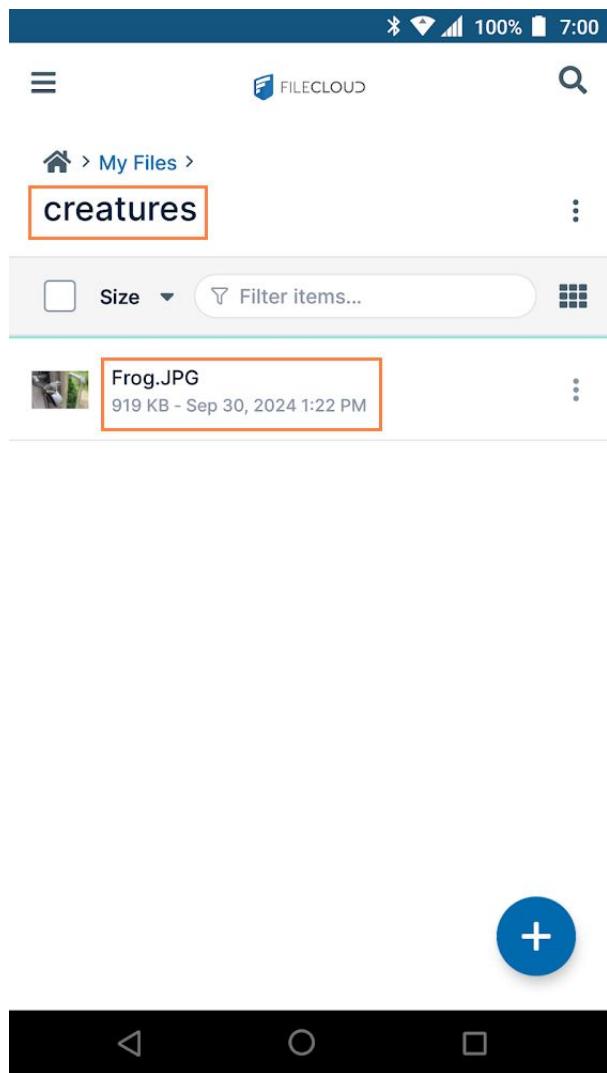

10. Tap **Save here**.

The file(s) are uploaded to FileCloud and saved in the new folder.

Navigate to the folder where you stored a file to confirm that it was saved there with the correct filename.

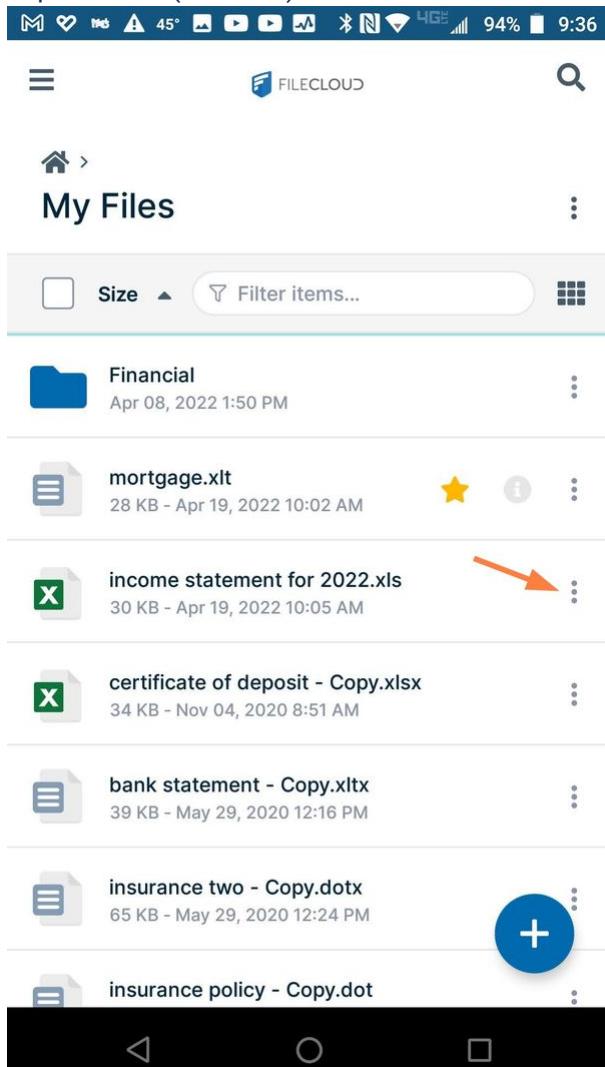

Sending FileCloud Files Using Other Android Apps

From the FileCloud Android app, you can use the **Send** action to send a FileCloud file using another Android app. For example, you can send the file through an email or messaging app to deliver it to another user, or you can send it to a PDF to store it in PDF format.

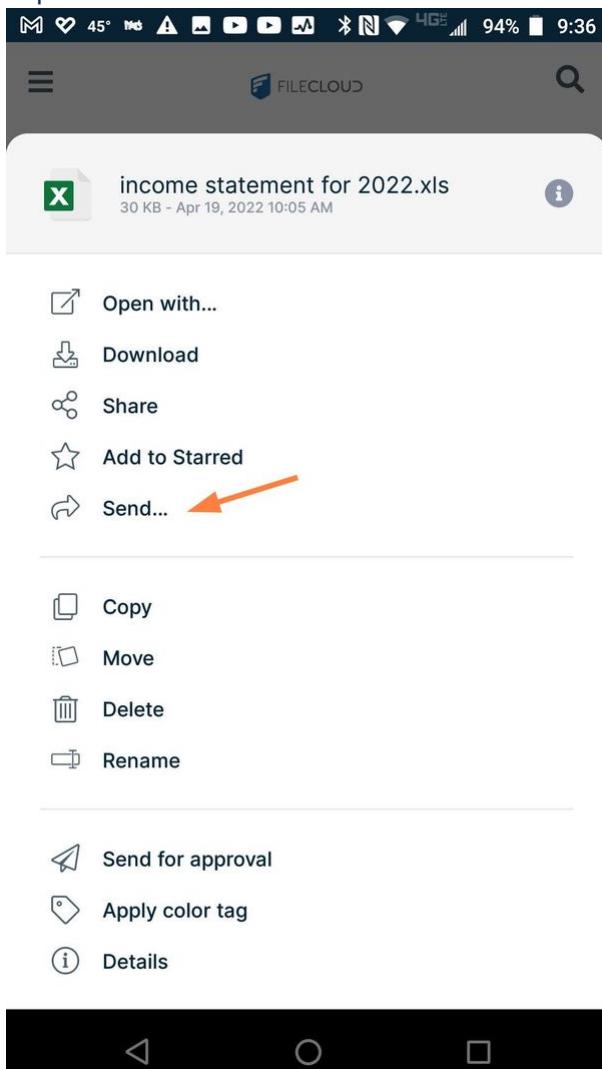

To send a file using another Android app:

1. Open the FileCloud App.
2. Navigate to the file you want to send.

3. Tap the more (three dot) icon next to the file.

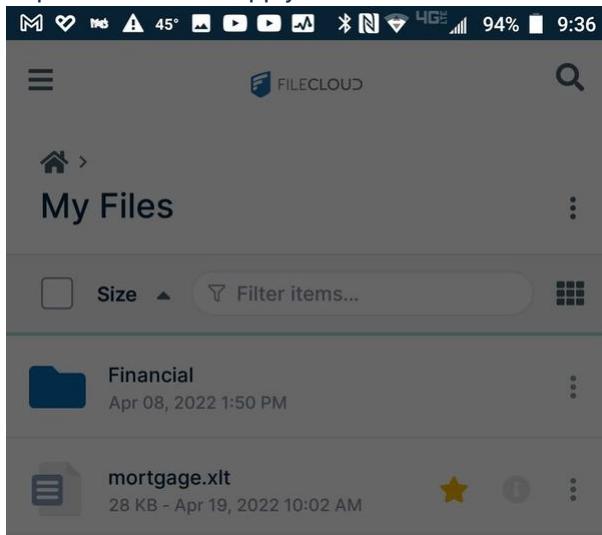

4. Tap **Send**.

A window displaying various app icons opens.

5. Tap the icon of the app you want to use.

Send file

The app opens with the file attached.

Troubleshooting Android Issues

If you encounter problems with the FileCloud Android app, you can use the information on this page to try and locate the issue and resolve it.

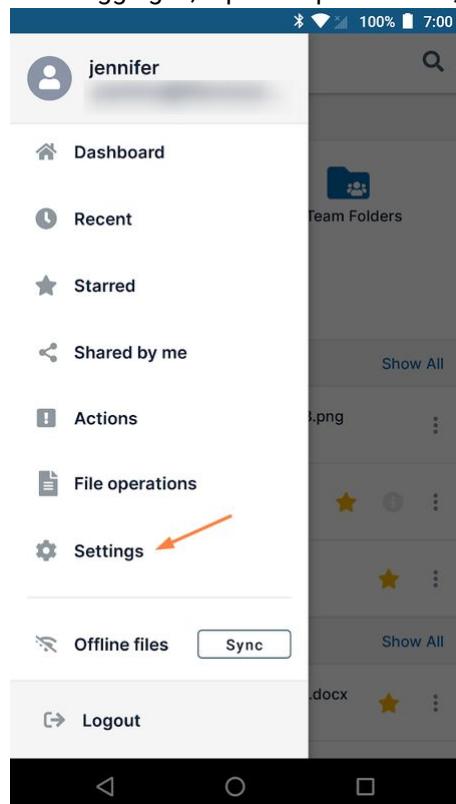

Getting Device Logs

Getting the device logs is the first step towards understanding a problem and distinguishing between server-side issues and Android issues.

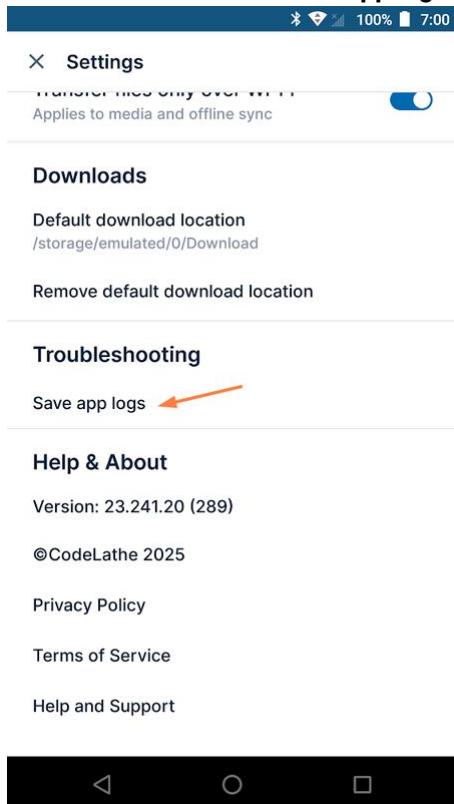

Sharing log information with our support team will help us investigate your issue and solve it promptly.

To retrieve app logs:

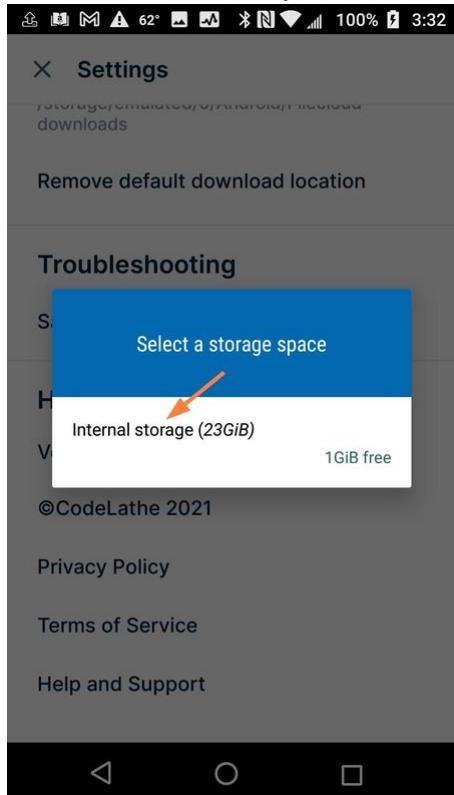

1. Go to **Settings** :
 - a. From the login page, tap the **gear icon** in the top right corner.
or
 - b. After logging in, tap the triple-bar icon, and then tap **Settings**.

2. Scroll down and select **Save app logs**.

3. Select a destination on your device to save the log file

💡 Your administrator can also get the logs from your device remotely.

Just contact your administrator and reproduce the actions that cause the issue you are experiencing.

Specific Errors

Issue	Error	Resolution
Android App Fails to Login	"Invalid Configuration" Server plugin(s) missing or disabled	<ul style="list-style-type: none">• Check that your device's time and date settings are correct• Ensure that automatic time and date is not disabled

Using MDM Software with FileCloud Mobile Apps

Permissions can be set for both mobile apps and other FileCloud clients using folder permissions or share permissions. Permissions set through MDM apps (or any third party applications) override these permissions.

This page is intended for admins, and only addresses using MDM software with FileCloud mobile apps. To use MDM software with FileCloud client apps, see [Managing FileCloud Client Apps with MDM Software](#)

Support for Mobile Device Management (MDM) app configurations is available with the following versions of the FileCloud mobile apps:

- iOS 18.2.10 and higher
- Android 18.2.1 and higher

FileCloud support complies with the [AppConfig Community Standards](#)¹².

Mobile device management (MDM) is an industry term for the administration of mobile devices, such as:

- smartphones
- tablet computers
- laptops
- desktop computers

However, the information on this page only addresses MDM of FileCloud on iOS and Android devices.

MDM is usually implemented with the use of a third-party product that has management features for particular vendors of mobile devices.

Mobile devices can also be managed through:

- Enterprise Mobility Management (EMM)
- Unified Endpoint Management (UEM)

How Do I Add FileCloud to My MDM?

Remember that MDM settings are case sensitive.

When typing in configuration settings such as account and SSO information, make sure you are using lowercase letters.

12. <https://www.appconfig.org/>

Although you may use any MDM software to manage your FileCloud devices, it has only been tested with [Manage Engine Mobile Device Manager Plus](#)¹³.

1. Enroll Your Device

When you enroll your device in the MDM software, you are issued an MDM certificate. This certificate is used to communicate with your MDM service.

Since there are many MDM providers and ways to enroll, please check your MDM documentation for instructions on how to enroll your device.

You must enroll your device. It doesn't matter if it is a personal or company-owned device.

- Personally-owned devices - in this scenario the MDM only manages some apps and those apps' configurations
- Company-owned devices - in this scenario the MDM manages everything, including the ability to remotely wipe clean all content from the device

2. Add FileCloud to Your MDM

Since there are many MDM providers and ways to add applications, please check your MDM documentation for instructions on:

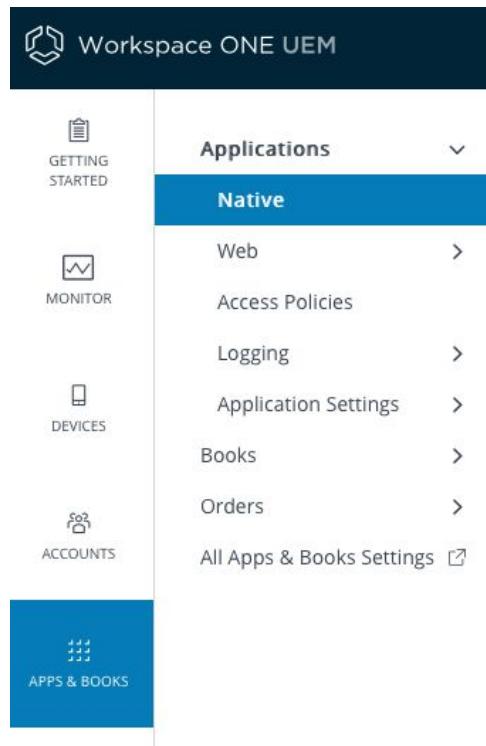

- how to add FileCloud to your MDM software.

In general, the steps for adding FileCloud to your MDM will include:

1. Open your MDM software.
2. Search for the FileCloud app.
3. Choose to add the FileCloud App.

For example, in VMWare's AirWatch MDM:

13. <https://www.manageengine.com/mobile-device-management/>

<p>1. Open your MDM software.</p>	
<p>2. Search for the FileCloud app.</p>	<p>Add Application</p> <p>Managed By <input type="text" value="M105028094"/></p> <p>Platform* <input type="text" value="Apple iOS"/></p> <p>Source <input type="button" value="SEARCH APP STORE"/> <input type="button" value="ENTER URL"/></p> <p>Name* <input type="text" value="FileCloud"/></p>
<p>3. Add the FileCloud App.</p>	<p>Apps & Books > Applications</p> <p>List View</p> <p>Internal Public Purchased</p> <p><input type="button" value="Filters"/> <input type="button" value="»"/> <input type="button" value="ADD APPLICATION"/></p>

Once the FileCloud app is added, complete the following steps:

- Assign the FileCloud App
- Configure the FileCloud App

These steps are discussed below in Steps 3 and 4.

Add Application

Managed By: M105028094

Platform *

- ✓ Select
- Apple iOS
- Android
- Windows Phone
- Windows Desktop

Source

Name

Workspace ONE® is powered by [VMWare AirWatch](#)¹⁴, which is the unified digital workspace platform that simplifies and secures app access and IT management.

3. Assign the FileCloud App

Assignments allow you to edit the settings of an application to exclude or include specific devices, use Groups, profiles, and compliance policies.

- You can edit Assignment settings when adding the app
- To change or edit the settings, navigate to the app in your MDM software and find the Assignments section

14. <https://www.vmware.com/>

In your MDM software, navigate to the FileCloud app

Apps & Books > Applications

FileCloud

Public | Status: Active

Details Devices **Assignment**

Assignments Exclusions

EDIT ASSIGN MORE ▾

Add an assignment
OR
Edit an existing one

FileCloud - Update Assignment

Assignments Exclusions

Devices will receive application based on the below configuration.
In the case where devices belong to multiple groups, they will receive policies:

ADD ASSIGNMENT

EDIT DELETE MOVE UP MOVE DOWN

Name	Priority	App Delivery Method	Managed Access
All Devices	0	Auto	<input checked="" type="checkbox"/> Enabled

For FileCloud, use the following assignments:

Managed Access = Enabled

Remove On Unenroll = Disabled

Prevent Application Backup = Disabled

Make App MDM Managed if User Installed = Enabled

App Tunneling = Disabled

Application Configuration = Enabled

💡 Once you set Application Configuration to Enabled, you can configure FileCloud.

To configure FileCloud, use the steps below in [4. Configure the FileCloud App](#)

FileCloud - Add Assignment

Would you like to enable Data Loss Prevention (DLP)?
DLP policies provide controlled exchange of data between managed and unmanaged applications. To prevent data loss on this application, make it "Managed Access" and create "Restriction".

Setting	Value	Details
Managed Access	ENABLED	DISABLED
Remove On Unenroll	ENABLED	DISABLED
Prevent Application Backup	ENABLED	DISABLED
Make App MDM Managed if User Installed	ENABLED	DISABLED
App Tunneling	ENABLED	DISABLED
Application Configuration	ENABLED	DISABLED

4. Configure the FileCloud App

Once you set **Application Configuration** to **Enabled**, you can configure FileCloud by uploading your xml file configuration file into the MDM application or entering the values manually into the MDM application.

ⓘ Enter Key-Value pairs to configure applications for users:

Application Configuration			
Configuration Key	Value Type	Configuration Value	
server	String	https://	✖
account	String		✖
password	String		✖
sso	Boolean		✖
enforce_lock	Boolean		✖
disable_edit	Boolean		✖
disable_download	Boolean		✖
disable_openwith	Boolean		✖
disable_share	Boolean		✖
disable_favs	Boolean		✖

To configure FileCloud, you can do one of the following:

- Upload the XML configuration files listed below. This populates the configuration fields for an administrator to configure.
- Manually enter the XML. If your MDM doesn't recognize any of the provided XML spec files, you can enter these values manually.

Upload one of these configuration files:

- FileCloud MDM specfile.xml
- FileCloud MDM specfile simple.xml

Enter these values manually, using the information in the table as a guide:

XML Tag	Type	Description
account	String	Enter the name of the account you want to setup
sso	Boolean	Set this value to true to create an SSO account
password	String	Password of the account to setup (for non-SSO accounts)
server	String	Server address / URL of your FileCloud server (MUST start with http:// or https://)
enforce_authentication	String	Either code , sso or password
enforce_lock	Boolean	Set to true to prevent login if an app-specific passcode has not been set
disable_edit	Boolean	Set to true to disable operations such as rename, copy, upload (if applicable)
disable_download	Boolean	Set to true to disable prevent file and folder downloads
disable_openwith	Boolean	Set to true to disable "Open with..."
disable_share	Boolean	Set to true to disable "Share" operation
disable_favs	Boolean	Set to true to disable "Add to Star" operation

You can delete any configuration fields that do not apply to your organization.

Sensitive information such as password are best removed from the configuration. When not present users will be prompted to input their password manually on the device once.
